Place: Bengaluru

## Professional Experience

### April 2023 – Present: ICT Infracon LLP – Bangalore | Associate Software Engineer, India

Full Stack Software Engineer with strong experience in developing web applications using Angular, Javascript, Java 17, Spring Boot, Spring JPA and SQL. Proficient in building secure RESTful APIs, responsive user interfaces, and scalable backend systems. Adept at collaborating with cross-functional teams in Agile environments. Proven ability to improve system performance and deliver production-ready code for government and enterprise-level platforms.

- Developed core modules using Java 17, Spring boot, Spring data JPA, Spring Cloud framework.
- Assisted in full-stack feature development, focusing on clean architecture and reusable components.
- Developed RESTful APIs using Spring REST.
- Build and developed frontend components using Angular and TypeScript.
- Built Angular-based UIs and managed backend logic with MS SQL Server.
- Optimized frontend modules using Angular and TypeScript, enhancing the user experience of a government portal by 30%.
- Contributed to internal documentation, project setup, and configuration of local development environments to support project onboarding.
- Contributed to requirement analysis, architecture, coding, testing, and deployment.
- Collaborated with QA, DevOps, and product teams in Agile sprints.
- Established clean, modular code practices and optimized performance.
- Integrated third-party APIs for the Coffee Board web app, boosting functionality and user satisfaction.

## Projects

### KPTCL – Meeting Management System

Frontend: Angular, JavaScript, TypeScript, HTML5, CSS3, ES6

Backend: Java17, Spring Boot, Spring JPA, SQL

- Designed and developed a comprehensive full-stack application to facilitate efficient scheduling, documentation, and management of meetings for Karnataka Power Transmission Corporation Limited (KPTCL).

- Developed robust backend services with Java 17, **Spring Boot** and integration with existing enterprise systems.
- Ensured application scalability and maintainability by adhering to clean code principles and modular architecture.
- Conducted rigorous dev testing to guarantee system reliability and user satisfaction.

#### **Coffee Board of India – E-Commerce Platform**

Frontend: Angular, JavaScript, TypeScript, HTML5, CSS3, ES6

Backend: Java17, Spring Boot, Spring JPA, SQL

- Developed a government-certified e-commerce site under the Ministry of Commerce.
- Contributed to internal documentation, project setup, and configuration of **local development environments** to support project onboarding.
- Assisted in full-stack feature development, focusing on clean architecture and reusable components.
- Contributed to frontend development using Angular and managed backend data via MS SQL Server.

#### **Technical Skills**

- **Languages:** Java17, SQL
- **Frameworks & Technologies:** Spring Boot, Spring Security, JPA, Hibernate, Microservices
- **Tools:** Git, GitHub, SVN, Maven, Design Pattern
- **Other:** RESTful APIs, Log4j, Collections framework, Data Structures & Algorithms

#### **Education**

##### **Bachelor of Technology – Information Technology**

Chandigarh Group of Colleges (CGC)

Aug 2017 – Aug 2021
