Professional Summary

Software Engineer with 2.5+ years of experience designing and developing scalable distributed backend systems using Node.js, NestJS, ReactJS, TypeScript, MongoDB, PostgreSQL, and Redis. Experienced in building multi-tenant microservices, REST APIs, API Gateways, WebSocket-based real-time systems, and event-driven architectures. Hands-on expertise in Keycloak, JWT, RBAC, RabbitMQ, BullMQ, Docker, CI/CD, caching, distributed locking, retries, throttling, circuit breakers, and system design. Built enterprise solutions including an AI-powered interview platform and a real-time IoT asset tracking platform.

Core Skills

- Languages: JavaScript, TypeScript, Java
- Core JavaScript: Async/Await, Promises, Closures, Event Loop, Execution Context, ES6+
- Backend: Node.js, NestJS, Express.js
- Frontend: React.js, HTML5, CSS3, JavaScript (ES6+)
- Architecture: Microservices, Distributed Systems, REST APIs, API Gateway, WebSockets, System Design
- Databases: MongoDB, PostgreSQL, Redis, MongoDB aggregation pipelines, Indexing, bulkWrite, Transactions, performance tuning
- Messaging: RabbitMQ, BullMQ
- Security: Keycloak, JWT, RBAC
- DevOps: Docker, Kubernetes (Basics), AWS (EKS, S3 basics), Git, CI/CD
- Tools: Postman, Swagger
- Concepts: Caching, Distributed Locking (Redlock), Rate Limiting, Retries, Circuit Breakers, Async Processing, Prompt Engineering

Professional Experience

Backend Engineer | Dot AI | Apr 2024 – July 2026

- Designed and developed 10+ scalable multi-tenant microservices using NestJS and MongoDB behind an API Gateway.
- Optimized database query performance through indexing and transaction management.
- Implemented Keycloak authentication with JWT and RBAC.

- Built resiliency mechanisms including retries, throttling, and circuit breakers.
- Developed backend services for real-time IoT asset tracking using Wiliot asset tags, bridges, and gateways.
- Integrated Pricer Electronic Shelf Labels (ESL) for inventory synchronization.
- Implemented Redis caching and Redlock-based distributed locking.
- Participated in scalable distributed system design and fault-tolerant architecture discussions.

Software Engineer | Skill IQ | Oct 2023 – Mar 2024

- Developed backend services for an AI-powered interview platform.
- Built scalable REST APIs and multi-tenant microservices using NestJS, MongoDB, and PostgreSQL.
- Created ChatGPT prompt-engineering workflows to extract skills from job descriptions and generate interview questions.
- Developed WebSocket-based real-time communication services.
- Implemented asynchronous workflows using RabbitMQ and BullMQ.
- Worked with DevOps teams on Docker, CI/CD, monitoring, and production deployments.
- Developed responsive user interfaces using ReactJS, HTML5, CSS3 and JS, React Hooks (useState, useEffect) for state and lifecycle management.
- Worked with EKS and Kubernetes basics, including Pods, Deployments, Services, ConfigMaps, and Secrets.

Key Projects

AI-Powered Interview Platform

Built backend microservices, REST APIs, WebSocket services, and AI-driven prompt-engineering workflows for automated candidate assessment and interview generation.

Tech Stack: Node.js, NestJS, ReactJS, HTML5, CSS3, MongoDB, PostgreSQL, RabbitMQ, BullMQ, Docker, ChatGPT

Real-Time IoT Asset Tracking Platform

Developed distributed backend services to process IoT telemetry, asset tracking, inventory movement, and ESL integration with scalable microservices.

Tech Stack: Node.js, NestJS, MongoDB, PostgreSQL, Redis, Redlock, Keycloak, Docker, RabbitMQ

Education

Bachelor of Technology (Computer Science & Engineering)
TKR College of Engineering and Technology 2022
