

ANURAG VASI

Senior React Native & React.js Engineer | Mobile & Frontend Architecture | 10+ Years

+91-8125237003 | vasi.anurag@gmail.com | linkedin.com/in/anurag-vasi-46595810a | Hyderabad, India

Remote (worldwide) or hybrid in Hyderabad | 4+ hrs daily overlap with US Eastern; full overlap with UK, EU, Middle East & APAC

SUMMARY

Senior mobile and frontend engineer with 10+ years shipping React Native and React.js products end-to-end, with 7 apps released to the App Store and Google Play. Sole developer on multiple production client codebases, including a white-label React Native platform serving 4 client brands and an enterprise Next.js account. Built the frontend of an internal LLM/RAG document platform on Pinecone vector search. Track record of picking up unfamiliar stacks fast — moved from .NET to React, web to React Native, and learned Vue.js in a week to deliver a client prototype. Also lead teams, but happiest with significant hands-on ownership.

TECHNICAL HIGHLIGHTS

- Shipped 7 mobile apps to the App Store and Google Play, owning the process end-to-end from architecture through release across both iOS and Android workflows
- Architected a white-label React Native codebase producing 4 independently branded client apps, with full Bitrise CI/CD for per-brand builds, code signing, and store releases
- Built the conversational frontend for an LLM/RAG document platform using Pinecone vector search and multi-workspace document isolation
- Eliminated performance bottlenecks on a production banking app through dependency auditing, app/bundle size reduction, memoization, and list virtualization

PROFESSIONAL EXPERIENCE

Senior Engineer / Tech Lead — React Native & React.js

Jun 2022 – Present

Omnics Technologies (product & services) — Hyderabad, India

- Sole developer on the Konica Minolta account, building Next.js pages with SSG and ISR to improve SEO, Core Web Vitals, and load performance
- Architected and solo-developed a white-label React Native codebase serving 4 separate client brands, including the full Bitrise CI/CD pipeline supporting a monthly release cadence across all brands, with code signing and submission via App Store Connect, TestFlight, and Google Play Console
- Built the conversational frontend for DMS, an internal LLM-powered document platform where uploads are embedded into Pinecone vector storage and queried in natural language across isolated workspaces; also owned requirements and led the project
- Built a content management platform end-to-end: React Native mobile app plus React.js and Node.js web backend, covering blog, post and event publishing, user management, authentication, in-app purchases, embedded video streaming, and course delivery
- Optimized mobile performance across projects using caching and lazy loading, list virtualization, memoization, and app/bundle size reduction; integrated push notifications (FCM/APNs), deep linking, offline storage, and OTA updates
- Defined micro-frontend architecture, reusable component libraries, and coding standards to improve maintainability and scalability across projects
- Built Kreuzworträtsel, an internal React Native crossword product, from real-time game logic through iOS and Android store deployment
- Learned Vue.js from scratch to solo-deliver a one-month client validation build (AVORI); the engagement converted and grew into a 4-person team I went on to lead
- Authored Dockerfiles across multiple frontend repositories to standardize environments and builds across differing project setups
- As the company's first engineer, went on to hire and mentor the engineering org to 12, interview 50+ candidates, and establish its sprint and delivery process in ClickUp
- Work fully remote with international clients, collaborating async with documentation-first communication across time zones

React Native Developer

Jun 2020 – Jun 2022

Accolite Technologies — Hyderabad, India

- Transitioned from web to mobile engineering, joining the Prudential Bank mobile app team as first React Native project and becoming productive on the codebase within weeks
- Built a health assessment feature that captures user photos and submits them to backend services in a standardized format to derive BMI and body-fat percentage
- Built the food diet planner and calorie tracker interfaces, expanding the banking app into health and wellness territory
- Built an OCR-based document capture interface, enabling users to scan documents directly in-app instead of manual entry
- Integrated native modules where platform access was required, including SIM/device-level data and deep linking
- Led a full UI/UX optimization pass across the app, modernizing screens and delivering pixel-perfect interfaces from Figma designs
- Audited and removed unused dependencies to reduce app and bundle size, and optimized state management with memoization, selector tuning, and list virtualization to eliminate unnecessary re-renders
- Improved app stability and crash-free performance through profiling and performance tuning, contributing to better App Store and Play Store ratings
- Mentored a 6-member development team through code reviews, pair programming, and technical training sessions

React.js Developer

Jun 2018 – Jun 2020

Pramati Technologies — Hyderabad, India

- Developed and maintained enterprise-grade React.js applications for business clients, owning feature delivery from requirements through production
- Built an internal browser-based visitor entry system: captured photos via webcam permissions, combined them with entered details, and generated print-ready ID cards, replacing a manual front-desk process
- Worked in a 3-member team to digitize the company's paper-based claims process (previously collected in a physical drop box) into a React and Node.js application with multi-level approval workflows
- Built real-time messaging features over WebSockets for a multi-server chat application
- Improved UI load times and perceived performance through code splitting, render optimization, Redis-backed caching, and reusable component patterns
- Built responsive, cross-browser interfaces to modern UI/UX standards, collaborating closely with design, backend, and QA teams

Project Engineer

Jun 2016 – Jun 2018

Wipro Technologies — Hyderabad, India

- Joined as a .NET engineer and transitioned to React.js and Node.js, contributing to both frontend and backend modules during a large-scale enterprise modernization effort
- Delivered features across complex enterprise systems, working to quality and scalability requirements set by client stakeholders

SELECTED PROJECTS

LOGIT — Logistics Management Platform (React, Node.js, React Native) — Admin web app for orders, shipments, positions, cargo item counts, and invoicing, plus a dedicated driver mobile app for shipment entry and working-hours logging synced to the same backend. Technical lead / EM from kickoff.

White-Label Mobile Platform (React Native, Bitrise) — Single React Native codebase producing 4 independently branded client apps, with per-brand configuration and automated Bitrise build and store-release pipelines. Sole developer and architect.

DMS — LLM Document Platform (React.js, Node.js, Pinecone) — Document platform where uploads are embedded into Pinecone vector storage and queried conversationally through LLM retrieval, with isolated multi-workspace access. Built the chat frontend and led the project.

Content Management Platform (React Native, React.js, Node.js) — Mobile app plus web admin backend for publishing blogs, posts and events, with user management, in-app purchases, embedded video streaming, and course delivery. Built both tiers.

Prudential Bank Mobile App (React Native) — Health assessment via photo capture returning BMI and body-fat metrics, food diet planner, calorie tracker, and OCR document capture, alongside a full UI/UX and performance optimization pass.

Kreuzworträtsel — Crossword Puzzle App (React Native, TypeScript, NativeWind) — Shipped to both iOS and Android app stores with real-time game logic, analytics, and full release ownership. **Live:** [App Store](#) | [Google Play](#)

Konica Minolta (Next.js) — Enterprise digital experience built with SSG and ISR for SEO and load-speed gains. Sole developer.

TECHNICAL SKILLS

Mobile Development: React Native, Expo, iOS & Android, Cross-Platform Development, NativeWind, Tailwind CSS, React Navigation, Reanimated, Gesture Handler, Native Modules & Bridging, Push Notifications (FCM/APNs), Deep Linking & Universal Links, Offline Storage (SQLite, AsyncStorage), OTA Updates (CodePush / EAS Update), White-Label Architecture

Mobile Release & Distribution: App Store Connect, TestFlight, Google Play Console, Code Signing & Provisioning Profiles, App Size & Bundle Optimization

Frontend Development: React.js, Next.js (SSG/ISR, App Router, Server Components), Vue.js, TypeScript, JavaScript (ES6+), HTML5, CSS3, React Hooks, Component Lifecycle, Virtual DOM, Responsive Design, Cross-Browser Compatibility, Micro-Frontend Architecture, Reusable Component Libraries

State Management & Performance: Redux Toolkit, Zustand, Context API, React Query / TanStack Query, SWR, Memoization, Render & Re-render Optimization, List Virtualization (FlatList), Caching & Lazy Loading, Web Performance (Core Web Vitals, Lighthouse), Profiling (Flipper, React DevTools)

AI / LLM: LLM-Powered Product Delivery, Retrieval-Augmented Generation (RAG), Vector Search (Pinecone), Conversational / Chat UI, Prompt Engineering, AI-Assisted Development (Copilot, Cursor, Claude Code)

Backend & Data: Node.js, REST APIs / RESTful Services, Third-Party API Integration, MongoDB, Redis (caching & indexing), Firebase, WebSockets / Real-Time, Authentication (OAuth, JWT, SSO), AWS

DevOps & Tooling: Docker, Bitrise, GitHub Actions, CI/CD Pipelines, Continuous Integration & Deployment, Git, Scalable System Design, Technical Documentation

Testing & Quality: Playwright, Unit / Integration / End-to-End Testing, Code Reviews, Quality Assurance

Leadership & Process: Engineering Management, People Management, Hiring, Interviewing & Onboarding, Mentoring & Coaching, Team Building, Technical Roadmap & Direction, Sprint Planning, Backlog Grooming, Retrospectives, Agile/Scrum, Kanban, ClickUp, Stakeholder Management, Client-Facing Communication, Technical Pre-Sales, Estimation & Scoping, Remote & Async Collaboration

EDUCATION, CERTIFICATION & KNOWLEDGE SHARING

Bachelor of Engineering (B.E.), Computer Science — MVSR Engineering College

2012 – 2016

MERN Stack Certification — Wipro Digital, 2017

Monthly internal tech seminars at Omnic's on software design principles; technical articles for Pramati's internal engineering blog.
