SUMMARY

Experienced Data Architect & Data Engineering Manager in Data & Platform Engineering, leading, solutioning different projects using skills such as Azure Tech Stack, Snowflake, Architecture and data modelling. Passionate in solving things by providing real time solutions. Strong in business domains such as medical, retail, oil and gas. Seeking opportunities to innovate data-driven solutions by leveraging skills to deliver significant performance enhancements.

EXPERIENCE

Senior Data Architect (Senior Specialist Engineer)

AT&T Inc.

October 2025 – Present, Hyderabad

The American Telephone and Telegraph Company, is an American multinational telecommunications holding company

- Proposed migration plan for **GWS** project (Global Workspaces), to move the legacy on-premise data to **Azure** cloud, reducing security and compliance risk by **70%**.
- Championed the design of **Azure** Solutions and infrastructures for **3.9k** clients using **Databricks, Python, Pyspark, SQL, Data Modeling** and **Java**.
- Managed 11+ folks as subject lead, ensuring they delivered project **15%** under the project and in compliance with the deadline.
- Provided technical expertise to **15** sales team members during proposal discussions and presentations to customers; achieved a **70%** success rate for deals closed.

Data Engineering Manager

PepsiCo

December 2022 – September 2025, Hyderabad, India

- Built data pipelines which enhanced data movement from **SAP** to Gold layer using ADF and **CI-CD** for versioning, increasing the data load by 30%. Spearheaded Labor–Cost Forecast tool project, predicting **95%** data using Random Forest AI and ML models.
- Leveraged systems table In Databricks to understand cost utilization and compare costs for job, interactive, **SQL** warehouse and serverless compute.
- Implemented unity catalogue to enhance data lineage and governance by migrating from hive meta store to UC enabled tables.
- Reduced **1.2M \$** capex and operational costs for the company, by migrating towards **serverless** compute.
- Calculated the realizations for compute costs by recommending the optimal clusters for every projects across PepsiCo. Realized **0.8M \$** for last half yearly savings. Derived Observability dashboard to showcase Cluster cost by compute, workspaces, environments, Sectors which gives management holistic view on resource costing.

Data Engineer III

Anheuser Busch InBev

September 2021 – December 2022, Bengaluru, India

- Led the architecture and migration of 95% on-premise data to Azure Cloud using Azure Data Factory (**ADF**) and Azure Databricks (**ADB**), enabling scalable and cost-efficient data pipelines.
- Designed and executed a comprehensive data validation and testing strategy for all in-scope reports, ensuring high data quality and accuracy post-migration.
- Built a robust automation framework for data quality checks including null validations, record counts, schema validation, and aggregation checks —reducing manual QA effort by **45%**.
- Mentored junior QA engineers, supporting their growth through task allocation, technical guidance, and roadblock resolution.
- Engineered scalable storage solutions leveraging **Azure** Data Lake to centralize **2TB** of daily ingested data across 10+ pipelines, improving data accessibility and analytical processing speed by **60%** over 18 months.
- Integrated Azure Synapse Analytics with existing Azure Data Lake architecture to unify batch and real-time analytics on 2TB daily data, reducing dashboard latency by 35% and supporting
- Managed migration of 1PB historical data to Azure Blob Storage over 12 months using AzCopy and Python scripts, optimizing storage costs by 40% and supporting seamless integration with ADF-based ETL workflows.

Senior Software Engineer

Seanergy Digital

December 2020 – September 2021, Hyderabad, India

- Simplified various Power BI dashboards, using data from SQL server.
- Created SQL stored procedures to derive the Key KPIs to be populated on **Power BI** reports.
- Migrated to serverless **Azure SQL** DB to enhance data reads by 45% increase in querying time.
- Built a robust automation framework for data quality checks including null validations, record counts, schema validation, and aggregation checks —reducing manual QA effort by **45%**.

Quality Analyst

TechnipFMC

July 2015 – December 2020, Hyderabad, India

- Designed and managed Hive tables using HiveQL, handling and analyzing over **5 TB** of data to support data-driven decision-making across organizational projects.
- Leveraged Big Data technologies including **Apache Spark, HDFS**, and Hive to process and optimize workflows for **25+ PB** of data annually, resulting in a 15% reduction in operational costs and improved efficiency.
- Spearheaded Labor-Cost Forecast tool project, predicting 95% data using Random Forest AI and ML models.

EDUCATION

Bachelor Of Technology

KL University • Vijayawada, Andhra Pradesh, India • 2015 • 9.1/10

- Silver Medalist in Mechanical Engineering.
- Best Outgoing Student of 2015 batch.

SKILLS

Technical Skills: Data Governance, ETL/ELT, Teradata, Hadoop, HDFS, Kafka, Apache Spark, Airflow, Salesforce, Hive, Data Quality.

Cloud Skill: Azure Data Factory, Azure Databricks, Data Modelling, Serverless SQL DB, Synapse.

Soft Skills: Positive Attitude, Enthusiastic, Ambitious, Problem Solver, Credibility, Commitment, Accountability.

Deployment Skills: CI-CD, Azure DevOps, Dev-SecOps, JIRA.

Data Engineering Tools: SSMS, Erwin Tool, Apace Kafka, Azure tech stack, Data Modelling.

Programming Languages: Python, Java, SQL, Scala.
