JOB OBJECTIVE

Pursuing opportunities to enhance Full-stack Development, with a strong focus on back-end technologies like Node.js, to deliver impactful and scalable solutions for high-profile clients in the IT industry.

EDUCATION

- **2019: B.Tech. in Computer Science** from Government Engineering College, Thrissur, Kerala

AREAS OF EXPERTISE

- User Experience Optimization
- Agile Project Management
- Data Visualization
- Software Architecture Principles
- Mobile Application Development
- Interactive User Interfaces
- Performance Optimization
- Requirement Gathering
- Incident Management

TECHNICAL SKILLS

- Node.js
- React.js
- Next.js
- Angular Framework
- TypeScript
- Java
- SCSS/SASS
- RESTful APIs
- SQL Database Management
- MongoDB
- Git Version Control
- AWS
- Redux State Management
- Postman API Testing
- Kafka
- Jest Testing Framework

CERTIFICATION

- NPTEL Database Management Certification | 2021

SOFT SKILLS

- Communication
- Analytical
- Problem-solving
- Critical Thinking

PERSONAL DETAILS

- **Date of Birth:** 27th May 1997
- **Languages Known:** English, Malayalam, Hindi, Tamil

Akshay K S

Senior Software Engineer

PROFILE SUMMARY

- Possess **7 years** of experience in **Full-stack Development**, with expertise in back-end, frontend and cloud technologies, including **Node.js, React, Next.js, Angular, and AWS** to deliver scalable solutions for diverse clients.
- Working as a **Senior Software Engineer 1** at **Marriott Tech Accelerator (Marriott International)**, primarily focused on building the orchestration layer for the Marriott Bonvoy and Marriott Digital ecosystem using **Node.js, Apollo GraphQL and Amazon Web Services**.
- Developed strong expertise across full-stack engineering roles, with a focus on **User Experience, System Design, Agile Project Management, Data Visualization, and high-traffic scalable application architecture, consistently delivering performant, reliable, and high-quality software solutions for enterprise-scale platforms**.
- Developed and deployed scalable solutions at **Televox Healthcare** using **Node.js**, improving back-end systems for virtual agents and healthcare platforms.
- Led the development of a highly successful campaign module, achieving an impressive conversion **rate of 10% at Businessonbot**.
- Proficient in using front-end technologies like **React, Next.js, Angular, and TypeScript** to create dynamic, user-centric interfaces that boost engagement and satisfaction.
- **Exhibited leadership** by fostering a collaborative atmosphere, promoting innovation, and mentoring junior engineers to enhance their technical skills.

WORK EXPERIENCE

Marriott Tech Accelerator | Hyderabad

Mar'25 – Present

Designation: Senior Software Engineer 1

Responsibilities:

- Core member of the node.js GraphQL orchestration team for the entire Marriott Bonvoy system, architecting federated APIs using Apollo GraphQL to unify multiple backend domains and client channels into a single scalable gateway
- Designed and evolved GraphQL schema architecture and resolver strategy, ensuring clear domain boundaries, reusability, and long-term maintainability across services
- Integrated AI-driven Cursor CLI workflows into the UXL development lifecycle, leveraging custom skills, rules, and agents to automate schema generation, resolver, scaffolding, and code standardization across modules
- Digital Loyalty : Led end-to-end backend architecture for Points Transfer to Partner Programs, designing integration flows, handling data consistency, and ensuring reliable communication with external partner systems such as Starbucks
- Digital Loyalty : Architected and implemented Givex gift card integration, including secure transaction flows, failure handling, retries, and external service orchestration
- Digital Content : Designed a dynamic content delivery system by integrating CMS-driven APIs with GraphQL, enabling scalable, personalized, and real-time content rendering across channels
- Improved system performance and scalability by implementing batching, caching strategies, and request deduplication, significantly reducing latency and downstream service load
- Collaborated with multiple domain teams to define API contracts, integration standards, and best practices, driving consistency and alignment across the platform
- Mentored engineers and contributed to architecture discussions, design reviews, and technical decision-making, influencing backend system design at scale

Achievements:

- Recognized for driving backend innovation and engineering excellence by introducing AI-assisted development workflows, optimizing system performance through caching and batching strategies, and leading critical integrations for Digital Loyalty and Content platforms within Marriott International systems

Velotio | Pune

Aug'22 – Mar'25

Designation: Senior Software Engineer

Responsibilities:

- Full stack software developer for clients Netflix and Televox Healthcare, leveraging Node.js, React GraphQL, and TypeScript to build scalable APIs and service integrations
- Netflix : Led a team of 6 engineers to design and integrate backend services supporting the consolidation of corporate and animation studio platforms
- Netflix : Developed and optimized backend APIs for the studio booking platform, ensuring efficient data handling, scalability, and seamless client integration
- Televox Healthcare : Architected and implemented secure authentication and authorization systems, including role-based access control and session management
- Televox Healthcare : Designed and developed dynamic, API-driven form systems with server-side validation and data processing, improving flexibility and maintainability
- Televox Healthcare : Led a team of engineers to build backend services for a real-time chat application, focusing on scalability, message handling, and reliable data flow

Achievements:

- Demonstrated strong technical leadership by managing engineering teams, driving platform consolidation initiatives, building secure authentication systems, and developing scalable real-time communication and dynamic workflow solutions that improved system reliability, maintainability, and user experience

Businessonbot | Bangalore**Jun'21 – Aug'22****Designation:** Front-end Engineer**Responsibilities:**

- Conceptualized and executed an intuitive admin dashboard for a B2B product, leveraging Angular, SCSS, D3, and Tailwind CSS to enhance usability and provide insightful data visualizations.
- Implemented a module for running campaigns with conversion rate around 10%.
- Engineered a versatile Shopify widget designed for rewards and referral programs, successfully deployed across multiple D2C websites, including Happilo and PeeSafe, to amplify customer engagement and retention.
- Implemented a user-friendly feature that enabled the customization of WhatsApp template messages and Shopify widgets directly from the admin dashboard, streamlining marketing efforts and enhancing brand communication.
- Developed a robust chat module that empowered agents to communicate with WhatsApp users through Socket.IO, fostering real-time interactions and superior customer support.
- Collaborated with cross-functional teams to gather requirements and ensure alignment with business objectives, contributing to the successful delivery of high-quality software solutions.

Achievements:

- Played a pivotal role in enhancing user engagement through the development of innovative features and components, while fostering collaboration between Technical and Design Teams to deliver high-quality software solutions.

Semantic Web India | Bangalore**Feb'20 – May'21****Designation:** Front-end Engineer**Responsibilities:**

- Contributed to the development of "Bharathi," a comprehensive collection of linked data vocabularies tailored for the Indian context, facilitating seamless metadata integration across various governmental functions.
- Worked closely with the Angular Front-end Team throughout the development lifecycle, from initial requirement gathering to successful production releases, ensuring high-quality deliverables.
- Utilized ngrx for comprehensive state management across the application, ensuring robust performance and scalability while enhancing user experience.
- Led the front-end development of "Samraksha," a versatile cross-platform application built on Ionic 5.0, ensuring optimal functionality and user engagement.
- Leveraged front-end technologies to develop interactive maps using Leaflet.js, enhancing user navigation and engagement within the application.

Achievements:

- Collaborated with the Centre for Cellular and Molecular Biology (CCMB), Hyderabad, in the development of "Sandhi Gene Variant Analysis" (Sandhi GVA), a cutting-edge gene variant analysis tool powered by Semantics.
- Contributed to the development of innovative applications and tools, focusing on performance optimization and collaborative practices that enhanced team productivity and user satisfaction.

Reliance Industries Ltd. | Mumbai**Aug'19 – Feb'20****Designation:** Graduate Engineering Trainee**Responsibilities:**

- Collaborated within the Front-end Team to contribute to the development of EDC-360, a project aimed at automating Reliance's data center functionalities, including cloud services and data center tools.
- Designed and implemented user-friendly dashboards and layouts, ensuring optimal usability and functionality while adhering to best practices in user interface design.

PROJECTS

- **Incovid19:** Developed a comprehensive COVID-19 data visualization platform with around 50,000 monthly active users.
