Summary

Technical Business Analyst with 6+ years of experience in banking and digital transformation, specializing in requirement analysis, API integrations, and Agile delivery. Proven ability to drive data-driven decision-making, optimize business processes, and support end-to-end system implementations. Expanding expertise in AI/ML, LLMs, and cloud-based data solutions to enable intelligent automation.

Work Experience

Technical Business Analyst/Scrum Master, iGreenData - A Synechron Company

- Led Agile delivery of banking regulatory and digital initiatives, improving sprint predictability and ensuring timely releases aligned with business goals. Collaborated with engineering teams using **Python and SQL** to validate end-to-end data flows
- Reduced requirement rework by 30% by defining clear API contracts, refining user stories, and aligning stakeholders on acceptance criteria.
- Optimized loan onboarding and processing workflows by identifying process gaps and leveraging data insights, reducing operational issues by 20%.
- Owned end-to-end requirement lifecycle from discovery to deployment, translating business needs into functional and technical specifications (BRD/FRD).
- Collaborated with cross-functional teams to support API integrations, data mapping, UAT, and production releases, ensuring seamless system communication.
- Improved data traceability by documenting end-to-end data lineage across APIs, Kafka events, and downstream banking systems, enabling faster impact analysis, regulatory compliance, and efficient root cause investigation.

05/2025
– Present

IT Business Analyst, TATA Consultancy Services Limited 12/2016-12/2024

- Led process optimization initiatives in banking operations, reducing operational costs by 20% through workflow improvements and data-driven analysis and Leveraged Python and SQL to analyze the data
- Supported implementation and enhancement of Loan Origination and Loan Management Systems (LOS/LMS) by gathering requirements, documenting workflows, and collaborating with business and IT teams across the commercial lending lifecycle.
- Worked with data pipeline concepts using Azure Data Factory to support data integration and reporting workflows.
- Facilitated system integrations, data mapping, and testing activities by creating process/system flows, coordinating UAT, and supporting migration from legacy banking systems.
- Implemented a customer feedback analytics framework to identify service gaps in digital banking channels, contributing to a 15% improvement in customer satisfaction scores.

Education

B.E Computer Science, Rajalakshmi Institute of Technology/Chennai
6.295GPA

06/2011 – 04/2014

Key Skills

Technical & Integration

SQL (MySQL), API Integration (REST, SOAP, Swagger, Postman), Data Mapping, Python, Data lineage

Agile & Tools

Jira, Confluence, Agile/Scrum, User Stories, UAT

Cloud & Emerging

Azure Data Factory (Basic), AI/ML Concepts, LLM & RAG (Awareness)

Core Competencies

Requirement Gathering, Stakeholder Management, Process Optimization, Analytical Thinking

PROJECTS(BANKING,E-COMMERCE)

Investor Portfolio Management System

- Developed an **Investor Portfolio Management** solution to provide investors and portfolio managers with real-time visibility into portfolio performance, asset allocation, and investment returns.
- Improved investment decision-making by enabling portfolio performance analysis, risk monitoring, and KPI-based reporting through interactive dashboards.
- Collaborated with stakeholders to gather business requirements, define portfolio performance metrics, validate data quality, and support UAT for investment reporting solutions.

Loan Approval Prediction System

- Developed a loan approval prediction solution to support faster and more accurate lending decisions through business and data analysis.
- Reduced loan processing turnaround time by leveraging SQL and Python for customer data analysis, validation, and reporting.
- Improved approval accuracy by defining business rules, validating datasets, and identifying customer eligibility trends for stakeholders.

AI-Driven Loan Risk Prediction & Intelligent Decisioning (ML/LLM Concepts)

- Defined business requirements for an AI-based loan risk prediction solution by identifying key variables such as credit score, income, and repayment history to support eligibility assessment.
- Collaborated with stakeholders and data teams for data mapping and validation, ensuring alignment between predictive outputs and business rules for faster, data-driven loan approvals.
