PROFILE SUMMARY

- **An accomplished professional**; offering **nearly 7 years** of comprehensive experience in **Software Development**, specializing in **Core Java, Spring Boot, Microservices**, and modern backend technologies, with a proven track record of delivering robust and scalable solutions across **multiple industries**.

CORE COMPETENCIES

- *Software Development Lifecycle*
- *Quality Assurance*
- *Client Engagements*
- *CI/CD, Microservices*
- *Scrum/Agile Implementation*
- *Risk Analysis & Mitigation*
- *Continuous Process Improvements*
- *Cross-Functional Collaboration*
- *Project Management*
- *Agile Methodologies*
- *Stakeholder Management*
- *Code Review and Testing*
- *Technical Documentation*
- *Requirement Analysis*
- *Performance Optimization*

TECHNICAL SKILLS

- **Languages & Frameworks:** Core Java, Spring Framework, Spring MVC, Spring Boot, REST API, Microservices, Spring Batch, Spring Data, JUnit, Mockito, GraphQL, Kafka, RabbitMQ
- **Databases:** Oracle, DB2, MongoDB, Cassandra, Elastic Search
- **DevOps Tools:** Jenkins, Maven, Gradle, Docker
- **Data Pipeline Tools:** Spark, Airflow DAG
- **Cloud:** AWS, GCP
- **Version Control and logging tools:** GIT, Splunk, Grafana
- **Ticketing Tool:** Jira

WORK EXPERIENCE

Since Oct'24 | Lead Software Engineer | Randstad Digital | Client - Walmart

Project: Identity Fraud Management

Technologies: Java 17, Spring Boot, Docker, GraphQL, Spark, Airflow, Microservices, Kafka

Roles and Responsibilities:

- Actively involved in design creation to drive technical solutions.
- Managing a backend team of five engineers, ensuring effective collaboration and productivity.
- Ensuring strict adherence to Agile methodologies and alignment with delivery timelines.
- Build scalable and robust engineering solutions.
- Focused on fostering high-performing, collaborative teams.
- Implemented features like quick reviews for that made integration with google AMP.
- Implemented data pipelines using Spark, Airflow DAG.

Oct'23-Oct'24 | Software Engineer-2 | Concentrix Catalyst | Client - T-Mobile

Project: Identity Fraud Management

Description: T-Mobile provided APIs to their vendors to securely access required user attribute information.

Technologies: Java 11, Spring Boot, Spring Data, Docker, GraphQL, Oracle DB, Microservices, Kafka, RabbitMQ

Roles and Responsibilities:

- Implemented GraphQL APIs to fetch required data for clients.
- Implemented RabbitMQ Messaging flow for Monetization mechanism.
- Implemented parent-pom mechanism for managing dependencies centrally.
- Actively involved in design discussions, code reviews, bug fixing, and implementing unit and integration testing.

May'23-Oct'23 | Technical Specialist | Nokia Solutions

Project: Automatic Switching of Network (ASON)

Description: Nokia developed a web-based enterprise solution for 5G network vendors to manage the automatic routing process in case of optical fiber failures.

Technologies: Java 8, Spring Boot, Spring Data, Docker, Elasticsearch, Oracle DB

Roles and Responsibilities:

- Implemented centralized logging system using ELK stack
- Given demo of microservices architecture implementation and its benefits.
- Implemented excel report generation using Apache poi.

May'21-May'23 | Software Engineer | Publicis Sapient | Client - City Bank

Client: CITI Bank

Project: Unified Reporting for Custody Reporting | **Role:** Software Developer

- **IDEs/Tools:** Eclipse, IntelliJ, Swagger, Postman, MongoDB Compass
-

EDUCATIONAL & CERTIFICATION CREDENTIALS

- **AWS Cloud Practitioner Certification** – Aug 2022
 - **Pro Degree Certification in Data Science and Machine Learning** – Imarticus Institute Pune, November 2019 – May 2020
 - **B.E. in Computer Science and Engineering** – Sinhgad College Solapur, 2018
-

SOFT SKILLS

- *Good Listener & Communicator*
 - *Team Building & Interpersonal Skills*
 - *Analytical Problem Solving*
-

PERSONAL DETAILS

Date of Birth: 7th May 1996

Address: Bangalore-560067, Karnataka

Description: Developed a stable web application for Citi Bank to streamline custody reporting. Contributed to building the landing page for report execution and scheduling.

Technologies: Java 8, Spring Boot, Spring Data, AG-Grid, Micro-Service, Kafka, MongoDB, JSON, Mockito, OpenShift, React

Roles and Responsibilities:

- Extensively worked in designing/developing in web application for CITI Bank for managing custody reporting.
- Designed and developed 4 microservices for report migration and scheduling part of report.
- Implemented AG-Grid server-side Implementation of functionalities such as sorting, filtering, pagination.
- Implemented excel and csv report generation functionality using jasper report technology.
- Given POC to client to reduce API response time by 100 times and implemented caching mechanism for storing entitlement information on server side.
- Involved in integration testing with front-end team, bug fixing session, support to QA team and given demo to client after every sprint.
- To make fault tolerant code implement unit test cases using mockito framework, done with rigorous local testing and integration testing as well.

Oct'18-May'21 | Software Engineer | Accenture Pvt. Ltd. | Client- Mela Elva

Project: Pension and Insurance Web Application | Role: Software Developer

Description: Client required stable web enterprise for their internal employees to manage the process of pension and insurance. We created a stable web application in which I have developed some new modules and added some functionalities to existing modules.

Technologies: Core Java, Spring Boot, hibernate, JavaScript, Ajax, JSON

Roles and Responsibilities:

- Extensively worked in designing/developing in web application for Finish Client for their pension and insurance project.
- Implemented Spring batches for processing chunk of data.
- Involved in deployment activities.
