🏠 Delhi - 110007

EDUCATION

- MCA, Gitarattan International Business School, Delhi, 2013
- BCA, Mother Teresa Institute of Management, 2010

CORE COMPETENCIES

- ➔ Product Strategy & Ownership
- ➔ Agile Methodology & Scrum Framework
- ➔ Requirements & Backlog Management
- ➔ Digital Transformation & Automation
- ➔ API Integration & Microservices
- ➔ Agile Scaling & Delivery Governance
- ➔ US Healthcare Systems
- ➔ Scalable Software Solutions
- ➔ Data-driven Decision Making
- ➔ Customer Experience & UX Focus
- ➔ Stakeholder Management & Leadership
- ➔ Client Communication & Cross-Functional Collaboration
- ➔ Market & Competitor Analysis
- ➔ Recruitment Initiatives

JOB OBJECTIVE

Dynamic and results-oriented **CSPO®** and **IBM AI** certified Product Owner with a strong focus on delivering innovative solutions in the software development industry. Expertise in managing product lifecycles, driving digital transformation, and enhancing customer experiences across diverse domains.

PROFILE SUMMARY

- ➔ **Seasoned & accomplished** Leader with **12+ years** of progressive experience in **product ownership, enterprise SaaS delivery, and Agile-driven digital transformation** across Hospitality, US Healthcare, E-Commerce, Real Estate, News, and E-Learning ecosystems.
- ➔ Strong **technical** foundation as a **former Developer and Team Lead**, enabling effective collaboration with engineering teams, architects, and DevOps.
- ➔ **IBM Generative AI and CSPO-certified** professional with proven track record in defining **product vision, shaping roadmap strategy, and leading end-to-end product lifecycle management**, translating complex business needs into scalable, API-driven, and cloud-enabled product solutions.
- ➔ Strong expertise in **Agile frameworks (Scrum & Kanban), backlog governance, sprint execution, and cross-functional delivery**, ensuring high-impact feature releases aligned with business KPIs and customer outcomes.
- ➔ Facilitated **discovery workshops** and requirements sessions with business stakeholders and enterprise clients to define product vision, roadmap priorities, and solution requirements.
- ➔ Showcased success in building and scaling enterprise-grade platforms with focus on **system integration, workflow automation, and data-driven product optimization** to enhance operational efficiency and user experience.
- ➔ Hands-on experience leveraging **AI-powered capabilities** including Generative AI, conversational assistants, and intelligent analytics solutions using tools such as **ChatGPT, AWS Kiro, and DeepSeek** to accelerate product innovation and decision intelligence.
- ➔ Skilled at **stakeholder engagement and strategic alignment** across global teams, with strong capabilities in business analysis, competitive market evaluation, risk mitigation, and delivering measurable value in fast-paced, enterprise environments.

WORK EXPERIENCE

UNIFOCUS, Gurugram | Technical Product Owner | Oct 2022 - Present

Key Result Areas:

- ➔ Spearheading end-to-end product strategy, roadmap planning, and Agile delivery for enterprise SaaS platforms, collaborating with business, engineering, QA, architecture, and operations teams to deliver scalable, business-aligned digital solutions.
- ➔ Owning the complete product lifecycle from discovery to post-launch optimization, including problem framing, solution design, requirement analysis, backlog prioritization, release planning, and continuous improvement.
- ➔ Translating business objectives and customer needs into well-defined epics, user stories, acceptance criteria, and prioritized product backlogs to maximize delivery efficiency and business impact.
- ➔ Driving stakeholder alignment across product leadership, engineering, DevOps, and business teams to ensure execution readiness, seamless collaboration, and successful product adoption.
- ➔ Leading product discovery, customer journey analysis, and workflow design initiatives to identify high-value opportunities and define scalable, validated solution approaches.
- ➔ Partnering with engineering and architecture teams on API integrations, system interoperability, and cloud-based SaaS design, ensuring technical feasibility and robust solution delivery.

IT SKILLS

- **Agile Product Delivery:** Agile (Scrum & Kanban), Jira, Confluence, Azure DevOps, SAFe
- **AI & Generative AI Product Management:** Prompt Engineering, AI Governance Awareness, ChatGPT, DeepSeek, AWS Kiro
- **Technical & System Design Tools:** Swagger (API Documentation), SQL, Cloud-based SaaS Platforms, Draw.io (Process & Architecture Modelling)
- **UX & Product Design:** Figma, Balsamiq, Wireframing, Prototype Design
- **Domain Expertise:** US Healthcare Domain, Hospitality, E-Commerce, Real Estate, News, and E-Learning ecosystems, Digital Platform Solutions, & Analytics Platforms
- **Release Management & CI/CD** Collaboration

CERTIFICATIONS

CSPO® - Certified Scrum Product Owner

Generative AI Certification

- Facilitating and governing Agile execution using Scrum and Kanban, while managing sprint ceremonies, release planning, UAT coordination, defect triage, and KPI-driven performance tracking to ensure delivery quality and operational stability.
- Created and maintained PRDs, functional specifications, workflow diagrams, process **documentation**, and release notes to support product delivery and stakeholder communication.
- Collaborate with **DevOps teams and leverage Azure DevOps** for backlog governance, sprint execution, work-item tracking, dependency management, release planning, defect triage and delivery visibility.
- Use Azure DevOps delivery dashboards and Agile metrics to track sprint progress, blockers, dependencies, release readiness and delivery performance across distributed teams.
- Lead the definition and delivery of AI-powered product capabilities, translating business problems into AI use cases, product requirements, workflows and measurable success criteria.
- Partner with AI, engineering and architecture teams to evaluate AI solution approaches and integrate Generative AI, conversational AI, intelligent analytics and automation into enterprise product workflows.
- Define AI product requirements covering **AI-assisted decision support, conversational workflows, intelligent summarization and workflow automation**, balancing user needs, business outcomes and technical feasibility.
- Define product requirements for LLM-powered applications, including conversational experiences, natural-language interfaces, AI summarization and intelligent information retrieval.
- Partner with AI engineering teams to define and validate RAG-based product workflows, translating business requirements into retrieval, response-generation and user-interaction requirements.
- Collaborate with engineering, architecture and DevOps teams on Microsoft Azure-based product delivery, ensuring product requirements are aligned with cloud architecture, technical feasibility and enterprise delivery standards.
- Leverage Azure DevOps for product backlog management, epic/feature decomposition, sprint planning, work-item tracking, dependency management, defect management, release coordination and delivery governance.
- Manage AI initiatives across the product lifecycle, covering AI use-case identification, discovery, requirements, data/workflow considerations, solution design, development, testing, UAT, deployment, adoption and continuous improvement.
- Drive adoption of Generative AI and Agentic AI capabilities to improve workflow automation, decision support, knowledge access, summarization and operational efficiency across enterprise products.

Key Projects:

Hospitality Operations & Workforce Management (Enterprise SaaS)

- Drove product initiatives for hospitality operations and workforce management, optimizing housekeeping workflows, room automation, and operational efficiency through scalable SaaS solutions.
- Improved operational performance by streamlining hospitality workflows and enabling data-driven decision-making across enterprise hotel environments.

Integration-Heavy Enterprise SaaS Platforms

- Led development of API-driven enterprise SaaS platforms focused on system integration, workflow automation, and cross-platform interoperability.
- Enabled seamless enterprise connectivity by defining integration requirements and supporting automation-driven digital transformation initiatives.

AI-Powered Guest Analytics Summarization

- Led product definition for AI-based summarization that transformed unstructured guest feedback into actionable business insights.

- ➔ Defined business outcomes, success metrics, and AI workflows to improve decision-making efficiency and enhance customer experience intelligence.

Conversational AI Guest Insights Assistant (AI Chatbot)

- ➔ Contributed to product strategy and solution design for a conversational AI assistant enabling natural language access to guest insights.
- ➔ Defined conversational workflows and user journeys to support self-service analytics and faster hospitality decision-making.

Platform Product Ownership (Shared Enterprise Services)

- ➔ Owned platform services including user administration, reporting, task scheduling, notifications, and security modules across enterprise applications.
- ➔ Managed backlog prioritization, stakeholder alignment, sprint execution, and Agile delivery for scalable platform capabilities.

Key Highlights:

- ➔ **Contributed to** high-impact enterprise hospitality programs for global clients, including Hilton-integrated workflows, supporting platform usage across **50,000+ end users in international hotel environments**.
- ➔ **Enhanced** sprint delivery predictability by **15%** by enforcing structured backlog prioritization, release discipline, and tighter stakeholder alignment.
- ➔ Managed product backlog of **2000+ user stories**, achieving **85% sprint predictability** across distributed Agile teams.
- ➔ **Delivered** enterprise-grade product enhancements across North America, Europe, MENA, Australia, and Asia, maintaining consistent release quality and platform stability.
- ➔ **Optimized** delivery governance practices, reducing requirement ambiguity and improving on-time sprint completion rates by approximately **12%**.

Nmg Technologies, Gurugram | May 2017 - Sep 2022

Growth Path:

Tech Lead | May 2017 - Jul 2018

Business Analyst | Aug 2018 - Sep 2022

Key Result Areas: Business Analyst

- ➔ Led product discovery and requirement workshops with clients across the US, Europe, and Australia to define scalable digital product solutions aligned with business goals.
- ➔ Managed end-to-end product backlog and Agile delivery cycles, ensuring alignment between engineering execution, roadmap priorities, and stakeholder expectations.
- ➔ Designed functional specifications, user stories, wireframes, API contracts, and data workflows for integrated web and mobile SaaS ecosystems.
- ➔ Directed UAT and release validation activities, improving client satisfaction scores by 20% through enhanced release quality and defect reduction.
- ➔ Analyzed post-release performance metrics to identify gaps and drive data-backed product enhancements and continuous improvement.
- ➔ Led product ownership for a **US-based healthcare platform enabling patient-provider connectivity**, covering onboarding, scheduling, booking, and care delivery workflows.
- ➔ Contributed to **Wolomi maternal US health platform** by defining user journeys, engagement workflows, and digital support experiences for expecting mothers through community-driven healthcare solutions.

Tech Lead:

- ➔ Led engineering delivery for on-demand food ordering and e-commerce platforms, managing complex backend/API integrations for scalable enterprise applications.
- ➔ Collaborated with backend engineering teams on system workflows, production issue resolution, and seamless delivery of high-impact features.

- ➔ Enhanced application performance and delivery efficiency by improving sprint execution quality, stability, and release outcomes across Agile cycles.

Classic Informatics | Rocket Labs | Dextrotech Software | Android Developer | Jan 2014 - Apr 2017

Key Result Areas:

- ➔ Developed scalable B2B and B2C mobile applications with a strong focus on performance optimization, security, and reliable digital product delivery.
- ➔ Strengthened technical execution across API integrations, application architecture, engineering delivery, and end-to-end software development lifecycle management.
- ➔ Contributed to a PropTech platform (App Cost First) by enhancing property cost estimation workflows and improving user experience through simplified, customer-centric digital journeys.
