Domain Expertise
- Core Banking - Merchant Payments - Onboarding - Servicing
API Management & Integration Tools
- REST APIs - SOAP APIs - Swagger (OpenAPI) - Postman - SoapUI - GitHub - Confluence
Databases
- SQL - GTM
Project & Defect Management
- JIRA - HP Quality Centre - Rally - FIS Review Tracker
File Transfer Tools
- Smart Term - PuTTY - WinSCP
Domain Tools
- Falet - Launchpad - WebCSR - WebAdmin - Teller - Web Client

Aravind Parthasarathy

Professional Summary

Senior Technical Business Analyst with 15+ years of experience in Core Banking, Payments, API Integration, and Agile software delivery. Experienced in both Technical Business Analysis and Functional Business Analysis, specializing in requirement elicitation, user story creation, API analysis, workflow modelling, stakeholder management, and end-to-end delivery. Hands-on experience in REST API analysis, OpenAPI specification review, API governance, SwaggerHub, GitHub integration, API-UI integration, and payment systems including SEPA, BACS, FPS and CHAPS.. Well-versed in SAFe Agile practices, cross-functional collaboration, and translating complex business requirements into scalable technical solutions.

Business Analysis

- Requirement Gathering - User Story Creation - Functional Requirements Documentation (FRD) - Use Cases - Workflow Diagrams - Process Mapping - Gap Analysis	- Requirement Traceability Matrix (RTM) - Stakeholder Management - Sprint Planning - Backlog Grooming - Capacity Planning - SAFe Practices - Acceptance Criteria
--	--

Work History

Senior Business Systems Analyst - FIS/Worldpay	Sep/22 - Current
- Gather business and functional requirements from Product Owners and business stakeholders and translate them into detailed user stories for Agile development. - Conduct requirement workshops and brainstorming sessions with Product Owners, Architects, Technical Leads, and Development teams to define project scope and solution approach. - Facilitated Agile Scrum activities such as sprint planning, backlog refinement, sprint demos, and retrospectives. - Prepare Functional Requirement Documents (FRD), workflow diagrams, process flows, use cases, and mapping documents. - Collaborate closely with Development, QA, and Product teams to clarify business requirements and resolve functional gaps during implementation. - Create mock-ups and workflow diagrams to improve requirement understanding and reduce implementation ambiguity. - Drive end-to-end delivery of new initiatives while ensuring alignment with business objectives and project timelines. - Review REST API specifications and validate API documentation against RESTful standards and Open API best practices to improve API consistency and quality. - Facilitate sprint demos and support stakeholders throughout the Agile development lifecycle. - Worked on API-UI Integration by validating API contracts with frontend applications to ensure seamless end-user functionality. - Coordinated source code review and documentation updates through GitHub Integration to support development and release management. - Partnered with Architects, Product Owners, and Development teams to incorporate R best practices into OpenAPI (Swagger) specifications. - Gathered and documented business requirements and translated them into Agile user stories with well-defined acceptance criteria. - Contributed to enterprise API standardization initiatives through OpenAPI governance	

Certifications	
- Certified Scrum Product Owner (CSPO I) - ISTQB Certified Tester – Foundation Level	
Banking Application	
FIS Profile	
Payment Application	
FIS Paas (Payment As a Service)	
Onboarding Application	
Launchpad	
Education	
- Master's Degree in Computer Applications - Bachelor's Degree in Computer Applications	
Languages	
- English - Tamil - Hindi - German	

- Improved API documentation quality by validating OpenAPI specifications against REST API best practices.
- Documented business requirements, meeting minutes, process flows, and project documentation in Confluence, ensuring a centralized knowledge repository
- Collaborated with Product Owners and stakeholders during backlog refinement to define Epics, decompose them into Features and user stories, and prioritize requirements for successful Agile delivery.
- Provided production support by analyzing business issues, coordinating with cross-functional teams, performing root cause analysis, and ensuring timely resolution of production incidents.
- Supported Incident Management, Change Management, and Release Management by analyzing business issues, coordinating with stakeholders and technical teams, and ensuring successful implementation and production support.
- Analyzed existing business processes, identified improvement opportunities, and collaborated with stakeholders to implement solutions that enhanced operational efficiency and business performance.
- Provided end-to-end support for User Acceptance Testing (UAT), coordinating with business users to validate requirements and resolve defects.
- Supported the delivery of multiple enterprise API integration projects.

Business Systems Analyst II- FIS

May/18- Aug/18

- Conduct brainstorming sessions and functional walkthroughs with Development and QA teams to ensure shared understanding of business requirements.
- Prepare Requirement Traceability Matrix (RTM), workflow diagrams, and business process documentation.
- Conduct demonstrations for business stakeholders and Product Owners.
- Monitor project scope, identify potential risks, and proactively manage requirement changes throughout the project lifecycle.
- Collaborate with Product Owners during backlog refinement and sprint planning activities.
- Coordinated source code review and documentation updates through GitHub and Git Integration to support development and release management.
- Raise, track, and coordinate domain-related issues across multiple teams to ensure timely resolution.
- Gathered and documented business requirements for the Launchpad application, enabling seamless merchant onboarding and end-to-end merchant servicing.
- Acted as the primary Business Analyst for production support, analyzing incidents, documenting functional defects, and coordinating with stakeholders to ensure service continuity.
- Performed functional analysis and validation of payment processing, exception handling, and reconciliation scenarios to ensure compliance with business and regulatory requirements.
- Collaborated with technical teams to validate SWIFT MT and ISO 20022 message structures, payment data mapping, and API integrations to ensure accurate end-to-end payment processing.
- Supported requirements analysis, testing, and defect resolution for payment solutions involving SWIFT MT, ISO 20022, and payment message transformations.
- Gathered and analyzed business requirements for BACS, CHAPS, FPS and SEPA payment processing, supporting end-to-end payment workflows and business rule validation.

Senior Software Test Analyst - FIS

Nov/16- Apr/17

- Lead QA activities by preparing and executing comprehensive test plans and test strategies.
- Design and execute REST API test scenarios using Postman and validate API responses against Open API Specifications.
- Develop and execute SOAP API test cases using SoapUI.
- Monitor application behaviour using Splunk dashboards to support defect analysis and issue resolution.
- Work closely with Product Owners, Developers, Business Analysts, and business stakeholders to deliver high-quality software releases.
- Track quality metrics and present testing progress to stakeholders.
- Mentor QA team members and contribute to test planning and quality improvement initiatives.
- Worked with business stakeholders to analyse & test payment flows involving BACS, SEPA and CHAPS payment processing.
- Performed API validation and supported API integration testing with frontend applications to ensure seamless end-to-end functionality.
- Performed end-to-end functional testing of the FIS Payment application (PaaS), collaborating with business and development teams to validate business requirements, payment workflows, and system functionality.

- Possess basic knowledge of API automation testing using SoapUI, including creating test suites, test cases, assertions, and executing automated API tests.
- Worked with SWIFT MT ,STD18, ISO 20022 (MX) payment messages to analyze business requirements and validate payment flows

Software Test Analyst – III – FIS

Jul/13- Oct/13

- Execute manual test cases and validate business functionality across multiple releases.
- Analyse test results, log defects, verify fixes, and perform regression testing.
- Develop detailed Test Plans, Test Strategies, and Test Cases.
- Collaborate with technical teams, business users, and management to ensure successful product delivery.
- Conduct sprint review demonstrations and participate in Sprint Retrospectives.
- Manage defect lifecycle using Jira.
- Executed end-to-end functional testing of the FIS Core Banking application (Proton) utilizing WebCSR, WebAdmin, and Teller to validate business processes and system functionality.
- Performed end-to-end functional testing of the Corporate Online Banking (COB) application by validating account management, payment processing, beneficiary management, and transaction workflows.
- Performed end-to-end functional testing of the Retail Online Banking (ROLB) application by validating account inquiries, fund transfers, bill payments, and transaction history functionalities.

Software Test Analyst – II & I – FIS

Nov/10- Jun/11

- Performed end-to-end functional testing for the FIS Core Banking application (Proton) using WebCSR, WebAdmin, and Teller to validate business functionality and ensure application quality.
- Create and execute SQL queries to validate business data and test results.
- Log, track, and verify defects using JIRA.
- Perform peer reviews of test scripts and business documentation to ensure quality standards.
- Participate in Disaster Recovery (DR) testing activities.
- Collaborate with Development and Business teams to resolve production issues.
