

RESUME

Bhupendar Singh Rathod

Room No 26 Mazagon Docks CHSL

Amrut Nagar opp BOI Ghatkopar west Mumbai

Maharashtra 400086

Mob: +91- 8976143933

Mail: [dhanjeetkaur13@gmail.com](mailto:ghanjeetkaur13@gmail.com)

Career Objective:

Having 11 years of experience in IT, experience in Vulnerabilities Assessment. Maintain the vulnerabilities tacker, Co-ordinate with the patch management team. Worked on the change management & Problem Management. Seeking a challenging role in a dynamic organization where my skills and knowledge can be utilized to improve network performance, security, and reliability.

Skills and profile: -

Profile Summary – Network Lead

Network Lead with extensive experience managing global enterprise networks across APAC, EMEA, and AMER regions for large-scale clients including General Electric. Proven expertise in network design, SD-WAN, WAN/MPLS, critical incident management (P1/P2), and stakeholder engagement. Strong leader with a track record of driving high availability, reducing MTTR, and delivering end-to-end network solutions aligned with business objectives.

Work Experience:

SME – Network & Digital security

Microland LTD Sept 2024 Till Date

Network Lead – Roles & Responsibilities

- Led global network operations for General Electric (GE) across 3 regions (APAC, EMEA, AMER), supporting mission-critical enterprise infrastructure.
- Acted as technical lead and primary escalation point for leadership, customers, and stakeholders.
- Owned end-to-end network project delivery, including requirement gathering, design, implementation, testing, and handover.
- Designed and implemented high-availability enterprise network architectures, supporting thousands of users and business-critical applications.
- Led IOS upgrades on routers, switches, and firewalls, ensuring zero or minimal business impact through structured change execution.
- Directed P1 and P2 critical incident management, leading bridge calls, coordinating cross-functional teams, and restoring services within SLA.
- Reduced MTTR by ~30–40% through proactive monitoring, improved escalation workflows, and root cause analysis.
- Managed outage, change, and problem management processes, including RCA documentation and preventive action planning.
- Planned and approved maintenance windows and downtime strategies, including traffic re-routing, failover, and rollback plans.
- Provided advanced troubleshooting support and technical data to NOC teams and Cisco TAC during complex escalations.
- Monitored network performance using enterprise network monitoring tools, enabling proactive issue detection and capacity planning.
- Led and mentored network engineers, conducting technical reviews and ensuring adherence to best practices.
- Managed and supported SD-WAN solutions (VMware VeloCloud), improving application performance and network resiliency.
- Demonstrated deep expertise in WAN, MPLS, Policy-Based Routing (PBR), VPNs, LAN/WAN, and network security.
- Delivered executive-level reports covering availability, incident trends, SLA compliance, and risk analysis.

Manager Network and Security

Syndrome Technologies Oct-2023 Aug-2024

Role and Responsibility

Handling a team of 10 members implementing a customer site and providing a end to end resolution for project completion Plan, design, and implement complex network solutions for enterprise customers

- Implementation (IOS upgradation on router, Switches & Firewall).
- Plan The Downtime & Arrange a resolution for re-routing of traffic in case of network/Activity Failure
- Provide Data to NOC & Cisco Tac as requested.
- Worked on outage, change management & problem Management.

- Tracking and reporting of incident Management, Problem Management
- Working Knowledge of Network Monitoring tools
- In-depth knowledge in WAN, MPLS Technologies Policy Based Routing
- Manage SD-WAN and Velo Cloud.
- Troubleshoot and resolve escalated network issues, including LAN/WAN, VPN, and security.

Sr Network Engineer

SOUTH STAR SOFTWARE PVT LTD

FEB-2022- Sept 2023

Role and Responsibility

- Perform the vulnerabilities Assessments on infra-Devices.
- Prepare the report of scanning and sent to respective BU's.
- Co-ordinate with the team member to get POA for remediation of vulnerabilities.
- Manage International Client for VA & Network issues.
- Implementation (IOS upgradation on router, Switches & Firewall).
- Plan The Downtime & Arrange a resolution for re-routing of traffic in case of network/Activity Failure
- Provide Data to NOC & Cisco Tac as requested.
- worked on outage, change management & problem Management.
- Tracking and reporting of incident Management, Problem Management
- Working Knowledge of Network Monitoring tools
- In-depth knowledge in WAN, MPLS Technologies Policy Based Routing
- Manage SD-WAN and Velo Cloud.
- Troubleshoot and resolve escalated network issues, including LAN/WAN, VPN, and security.
- Plan, design, and implement complex network solutions for enterprise customers.

Sr Network security Operation engineer (L2)

Teleperformance Global Pvt Ltd

Mar 2021 – Jan 2022

Role and Responsibility

- Plan, design, and implement complex network solutions for enterprise customers.
- Vulnerability assesment of Router,Switches & Firewall on Nessus
- Managing BMC remedy for incident management and change management
- Analyzing the VAPT report
- Hardening of Network Devic as per secure configuration stanadards
- Managing firewalls
- Switches(c3560 and 3750), L2 Switches(C2960 Models)
- Upgrading IOS of firewall ASA 5505
- Whitelisting of IPS
- Troubleshoot and resolve escalated network issues, including LAN/WAN, VPN, and security.
- Analyse network performance and develop solutions to optimize network performance.

- Collaborate with cross-functional teams to develop network designs and provide recommendations on network architecture and configurations.
- Ensure network security and compliance with industry standards and regulatory requirements.
- Install, configure, and maintain networking equipment including switches, routers, firewalls, and VPN appliances.
- Conduct network testing and evaluate new technologies to improve network performance.
- Create and maintain network documentation, including network diagrams, IP address assignments, and network configurations.
- Provide technical mentorship and guidance to L1 engineers.

BIRLASOFT PVT LTD

Mar 2020- March 2021

SR Technical Consultant (L2)

- Key Result Areas:
- Being responsible for the configuration, upgradation operation maintenance and management of IT Related software and hardware of the company, including
- LAN Switching technology including STP, VTP Domain management routing protocols (OSPF, BGP)
- Strong hands-on Experience on Cisco Network Hardware Like Cisco Network Hardware like CISCO nexus switches such 5k.
- Switching protocols such as HSRP, VRRP, GLBP
- Conducting project meetings & taking stringent decisions as per the requirement
- Performing first-line investigation and diagnosis as well as escalating incidents/service requests within agreed timescale
- Addressing & resolving field incoming incidents & service requests within stipulated time

SYX Services Pvt Ltd.

Network Engineer (L2)

Feb 2019- Feb 2020

Role and Responsibility

- Designed, implemented, and maintained network infrastructure for multiple clients, including LAN, WAN, and VPN solutions.
- Configured and optimized routing and switching protocols, such as BGP, OSPF, VLANs, and STP.
- Implemented network security measures, including firewalls, VPNs, IDS/IPS, and access control lists (ACLs).
- Monitored and analyzed network performance using tools like Wireshark, SolarWinds, and NetFlow.
- Conducted regular network audits to identify vulnerabilities and implement appropriate security patches and updates.

- Collaborated with cross-functional teams to plan and execute network expansion projects.
- Resolved complex network issues by analyzing logs, conducting packet captures, and performing root cause analysis.
- Created and maintained network documentation, including network diagrams, configurations, and SOPs.
- Assisted in vendor selection and managed relationships with network equipment suppliers and service providers.
- Mentored and trained junior network engineers, providing guidance and support in network troubleshooting and best practices.

Network engineer L2

Asap Infosystems,

MARCH -2017 – May 2018

Role and Responsibility

- Plan, design, and implement complex network solutions for enterprise customers.
- Troubleshoot and resolve escalated network issues, including LAN/WAN, VPN, and security.
- Analyse network performance and develop solutions to optimize network performance.
- Collaborate with cross-functional teams to develop network designs and provide recommendations on network architecture and configurations.
- Ensure network security and compliance with industry standards and regulatory requirements.
- Install, configure, and maintain networking equipment including switches, routers, firewalls, load balancers, and VPN appliances.
- Conduct network testing and evaluate new technologies to improve network performance.
- Create and maintain network documentation, including network diagrams, IP address assignments, and network configurations.
- Provide technical mentorship and guidance to L1 engineers.

Wipro Technologies Ltd.

(Telstra), Pune Senior Network Engineer

MAR 2016 to November 2016

Role and Responsibility

- Engaged in troubleshooting of ADSL 2 routers.
- Managed Routers creating Vlans, Troubleshooting of Network related issues
- Utilized SIAAM & Siebel Portal for tickets Completed phone registration Polycomvvx500.
- Verified & updated cisco router configuration and often Juniper routers.
- Rendered network L1 support to more than 5K devices as well as to USA based CU's
- Monitored VLAN & VTP configuration on new L2 devices.

- Formulated weekly & monthly reports of reported issues Observed link on PRTG & NetFlow
- Created ticket on remedy.
- Provided rotational after-hours (on-call) support for APAC (Asia Pacific) & America
- Administered a multi-server 5+ node network, along with 5 team members.

(Network Engineer L1)

Javi System, Mumbai Mar 2014- Feb 2016

- Client: Bank of India Data Centre
- Key Result Areas:
- Engaged in monitoring network of routers, switches, and multiplexers through SDH network Resolved daily network problems in the respective network.
- Rendered telephonic customer support in case of technical & software related problems.
- Liaised with Field Engineer for managing the installation, maintenance and troubleshooting of n/w Gained experience on Cisco Router 1800, 2800, 2900, 3400 series and so on
- Steered the upgradation of IOS on 2800, 1800, 1900, 2900, series Cisco Router

Educational Qualification:

BOARD/UNIVERSITY	School/College	Examination
MBA	OP Jindal Global University	MBA in IT and AI
Maharashtra	MUMBAI UNIVERSITY	PGD IN IT and Cyber Security
Senior Management Programme	IIM Indore	SMP(IIMI 05)
Karnataka	ST. claret	BCA
Maharashtra	GURU NANAK Jr College	HSC
Maharashtra	DOMINIC SAVIO VIDYALAY	SSC

Declaration:

I certify that to the best of my knowledge and belief, this CV correctly describes me, and my qualifications.

Bhupendar Singh
