CAREER OBJECTIVE

Power Platform Developer with **3+ years of hands-on experience** in designing and delivering **business process automation, Microsoft Teams chatbots**, and **AI-powered workflows** using **Power Automate** and **Copilot Studio**. Strong expertise in **email automation, Teams-based conversational bots, Dataverse integrations**, and Power Apps, helping organizations improve productivity and reduce manual effort through intelligent automation.

PROFILE SUMMARY:

- Designed and implemented **Copilot Studio chatbots integrated** with **Microsoft Teams** to handle employee queries and process requests.
- Built **Power Automate flows to summarize incoming emails**, extract key information, and post actionable insights directly into Teams.
- Automated business workflows using **approval flows, scheduled automations, and Teams notifications**, reducing response time significantly.
- Developed **Canvas and Model-Driven Apps** integrated with Dataverse and SharePoint Online.
- Created **Power BI dashboards** to track automation KPIs and operational performance.
- Collaborated with business users to identify automation opportunities and deliver scalable solutions.
- Developed and maintained **PowerApps (Canvas Apps, Model-Driven Apps)** and automated workflows using Power Automate, ensuring modern and user-friendly application design.
- Hands-on experience in designing and developing cloud solutions based on **Microsoft Power Platform** using **Power Apps, Power Automate, Power BI, Power Apps Portal** and Common Data Service (CDS).
- Experienced in **Power Automate** working with **services, triggers, actions, conditions, parallelism, and loops**.
- Worked with services, triggers, actions, conditions, parallelism, and loops - Run a flow on a schedule, calling custom business services - Using **approval options, observing flows, Team Flows**
- Creating and deploying applications using **PowerApps** to enhance business productivity.
- Designing and implementing automated workflows with **Power Automate** to streamline operations.
- Utilizing **Power BI** to develop data analytics solutions that support decision-making processes.
- Applied **UX and UI** principles to create modern, user-friendly **PowerApps Canvas** applications.
- Worked with **SharePoint, SQL, and Dataverse** to integrate and manage data effectively.
- Develop **custom PowerApps** components to match specific customer requirements
- Automated workflows using **Power Automate**, saving over 500 man-hours per month.
- In-depth knowledge and experience on stages of **Software Development Life Cycle (SDLC)** based on agile methodology and scrum process.

TECHNICAL SKILLSET:

- **Automation & AI:** Power Automate (Cloud & Scheduled Flows), Copilot Studio, AI Builder
- **Chatbots & Collaboration:** Microsoft Teams Bots, Adaptive Cards, Email & Teams Notifications
- **Power Platform:** Power Apps (Canvas & Model-Driven), Dataverse, Power BI
- **Email Automation:** Outlook triggers, email summarization, sentiment & intent handling
- **Integrations:** SharePoint Online, SQL, Custom & Standard Connectors
- **Data & Logic:** Power Fx, DAX, Power Query
- **Delivery:** Agile, SDLC, Stakeholder Collaboration

EXPERIENCE SUMMARY:

- Working as Power Platform Developer in **ParallelDots (Remote)** from Aug 2024– 23 Jan
- Worked as Business Consultant / Power Apps Developer in **Quation Solutions** from Feb 2022– Jul 2024

CERTIFICATION:

- Microsoft Certified: Power BI Data Analyst Associate (**PL-300**)
- Microsoft Certified: Power Platform Fundamentals (**PL-900**)

EDUCATION:

- Bachelor of Science (Physics) — Savitribai Phule Pune University in 2018

PROJECT SUMMARY:

Project 1:

- **Project Name** : Microsoft Teams Chatbot for Employee Support
- **Client** : Dell
- **Technology/Tools** : Copilot Studio, Microsoft Teams Integration, Power Automate, Dataverse, Outlook Connector, SharePoint Online, AI Builder (Intent & Entity Handling), Power Fx
- **Role** : Power Automate/Apps Developer

Responsibilities:

- Designed and developed an **AI-powered conversational chatbot using Copilot Studio**, tailored for internal employee support use cases.
- Deployed and configured the chatbot within **Microsoft Teams**, enabling seamless access through employee workspaces.
- Created **intents, topics, entities, and conversation flows** to handle common employee queries such as requests, approvals, and status tracking.
- Integrated the chatbot with **Power Automate workflows** to trigger backend business processes and approval mechanisms.
- Implemented **adaptive cards in Microsoft Teams** for rich user interactions, request submissions, and real-time status updates.
- Built **Power Automate approval flows** to route employee requests to respective approvers and notify users upon completion.
- Connected chatbot workflows with **Dataverse and SharePoint Online** for secure data storage and retrieval.
- Configured **Outlook email notifications and Teams alerts** to keep stakeholders informed throughout the process lifecycle.
- Applied **AI capabilities** to improve intent recognition and enhance chatbot response accuracy.
- Implemented role-based access and user context handling using **Teams authentication**.
- Performed **unit testing, UAT support, and production deployment**, ensuring reliability and performance.
- Collaborated with business stakeholders to gather requirements and continuously enhance chatbot capabilities.
- Reduced manual support effort by automating repetitive queries and improved response turnaround time significantly.

Project 2:

- **Project Name** : Email Summarization & Automation Solution
- **Client** : Sappe
- **Technology/Tools** : Copilot Studio, Microsoft Teams Integration, Power Automate, Dataverse, Outlook Connector, SharePoint Online, AI Builder (Intent & Entity Handling), Power Fx
- **Role** : Power App/Automate Developer

Responsibilities:

- Designed and developed **Power Automate automated flows** triggered by incoming **Outlook emails** based on specific conditions (sender, subject, keywords, priority).
- Integrated **AI Builder and Copilot AI capabilities** to **summarize email content**, extract key points, and identify intent or request type.
- Implemented **email classification logic** to route requests to appropriate Teams channels or stakeholders.
- Built **Teams notifications and adaptive cards** to post summarized email insights for faster review and decision-making.
- Automated creation of tasks, approvals, or follow-up actions based on extracted email information.
- Stored summarized data and metadata in **Dataverse / SharePoint Online** for tracking, auditing, and reporting.
- Configured **exception handling, retries, and logging mechanisms** to ensure reliable automation.
- Optimized flow performance by reducing unnecessary actions and implementing parallel branches where applicable.
- Collaborated with business users to fine-tune summarization rules and improve accuracy.
- Conducted **testing, UAT support, deployment, and post-production monitoring** of automation workflows.
- Ensured data security and compliance while handling email content and user information.
- Significantly reduced manual effort required to read and process high-volume emails.
- Improved response time by delivering **actionable summaries directly to Microsoft Teams**.
- Enhanced operational efficiency through AI-driven email processing and automation.
