Professional Summary

Java Full Stack Developer with 2.5 years of experience in designing, developing, and maintaining enterprise-level web applications in the insurance domain. Skilled in building scalable **Spring Boot microservices** and dynamic **Angular frontends**, with hands-on expertise in **REST APIs, JWT authentication and CI/CD**. Adept at solving complex problems, collaborating with cross-functional teams, and delivering business-focused solutions.

Skills

Back-End: Core Java, Spring Boot, Spring MVC, Spring Security, Spring JPA, Hibernate, Microservices, JWT

Front-End: Angular, TypeScript, JavaScript, jQuery, HTML, CSS, JSP, Ajax

Tools & DevOps: Git, Postman, Swagger, Maven, Docker, AWS, Jenkins

Database: MS SQL

Other: Data Structures & Algorithms, Design Patterns

Professional Experience

Software Engineer

April 2023 – Present

Chequs Infotech

- Collaborated with business teams to understand requirements and develop products aligned with business needs.
- Designing and developing both front-end and back-end systems tailored to meet client specifications within the insurance domain.
- Adapting existing implementations to accommodate new requirements or improvements.
- Conducting impact assessments on individual changes, ensuring the composition of modular and optimized code without interrupting current functionalities.
- Engaging in bug resolution and system debugging to maintain optimal performance.
- Identifying the root cause of issues and executing timely resolutions within defined timelines
- Developing comprehensive unit tests and overseeing database operations to ensure accurate data insertion or modification during the initial development phases.
- Having Good Exposure on implementing **OOPs** Principles.
- Hands on Experience working with **ORM** Technology **Hibernate**.
- Implemented **inter-service communication** using **Feign Client**, ensuring seamless API integration between services.
- Optimized application performance by replacing CDN-based libraries with locally stored files, ensuring seamless functionality even in low or no internet conditions.
- Designed and implemented **multi-module applications** in **Spring Boot**, improving **code modularity, maintainability, and scalability**.
- Built and deployed a full-stack application by generating an executable JAR for Spring Boot backend and building the Angular frontend.
- Used **Maven** to build and generate executable JAR files for Spring Boot backend services.
- Hands-on experience with **CI/CD** pipelines using tools like Jenkins/Git CI to automate build and deployment processes for Spring Boot and Angular applications.
- Developed and maintained **Spring Boot microservices** in a distributed architecture to handle insurance domain workflows.

Projects

AFRI - Life Insurance Software Management Application

Responsibilities:

- Involved in the discussion, estimation, analysis, design and implementation of Business requirements.
- Fixing the defects raised during testing.
- Used best coding practices and naming conventions while writing code in Java and spring.
- Created and modified new and existing pages, applied new styles on the pages with the help of JavaScript and Angular.
- Resolved production issues and implemented requirement changes to improve system performance and usability.

Technologies Used:

- Frontend: Angular, HTML, CSS
- Backend: Spring Boot, Hibernate
- Database: MS SQL
- Version Control: Git

Acacia - Health Insurance Portal

Responsibilities:

- Developed and enhanced microservices architecture using Spring Boot.
- Integrated Feign Client to facilitate efficient inter-service communication between microservices.
- Designed and developed dynamic Angular forms to collect and validate user data efficiently.
- Designed and implemented DTO (Data Transfer Object) classes for structuring API request bodies.
- Utilized Object Mapper to efficiently map DTO classes to DO classes for seamless data processing and database operations.
- Designed and developed a Global Exception Handler in Spring Boot, ensuring centralized error handling across the application.
- Logged and tracked exceptions efficiently using **SLF4J** aiding in **faster debugging and issue resolution**

Technologies:

- Frontend: Angular, HTML, CSS,
- Backend: Spring Boot
- Database: MS SQL

Education

BSC - VDA Degree College

Certifications

- JavaFullStack Developer – Jspiders
- REST API – Hacker Rank
