C.B.S.E BOARD

10TH - 76%

C.B.S.E BOARD

KEY SKILLS

Python

GenAI, LLM

Machine Learning

Deep Learning

NLP, NLU, Spacy, OCR

Hugging Face, Distil Bert, Transformer

ANN, CNN, RNN, Rest API

Langchain, Cognitive Search, Embedding

Prompt Engineering, Redis Db, Pinecone

NumPy, Pandas, Scikit- Learn, Docker

Azure, function app, Web app, Form Recognizer

AWS

CERTIFICATIONS

Azure AZ-900

Deep Learning Prerequisites

ABOUT

As a seasoned Data Scientist, I bring over total 7 years of IT, nearly 4 years of hands-on experience in Python-based Data Science, specializing in cutting edge technologies like Machine Learning, Deep Learning, Time Series, Transfer Learning and 2 years in Generative AI. From transforming business problems to implementing state-of-the-art models like GenAI, Transformer, Distil Bert, Hugging face.

EXPERIENCE

DATA SCIENTIST • FEB 2022- PRESENT

Capgemini • Bangalore

Chatbot (Retrieval Augmentation Generation) GenAI: -

Working in utilizing GenAI for Retrieval Augmentation Generation (RAG) within the Semiconductor sector, I led the successful execution of end-to-end RAG architecture to overcome specific business challenges. Leveraging cutting-edge technologies such as Amazon Bedrock, Faiss, Langchain, and employing techniques like Prompt Engineering, chunking methods, and pre-processing, I ensured the seamless integration of advanced tools. Additionally, I utilized Azure durable function, Azure Webapp, and Rest API to enhance functionality and provide efficient solutions.

Knowledge Search (Question & Answer) GenAI: -

Implemented a knowledge search(Q&A) system for client by leveraging GPT3, GPT3.5, and GPT4 models. Applied azure form recognizer to ensure precise information extraction and developed pre-processing pipeline for efficient data storage and chunking. Applied prompt engineering with few shots to classify diverse query types so to extract relevant chunk from Redis database and to find best utilized chunks and their metadata to generate context of utilized chunks. Integrated a structured data pipeline to fetch details from snowflake database by generating snowflake query with the help of prompts. Implemented article and summary generation, showcase business Insights by using research and news documents. Limit the model to provide any sensitive information or personal information and connected the user interface with a Rest API for seamless data exchange.

Locomotive Part Failure Prediction: -

The objective of this project is to predict the is failure of Locomotive parts based on different machine components. Locomotive failure prediction using different Time series Algorithms.

Identified last transactions happened for all locomotive parts for maintenance from raw data and we predicted maintenance cost for next coming years.

DATA SCIENTIST • SEP 2021- JAN 2022

Experis IT • Bangalore

Online Retail Analysis

The project focuses on analyzing online retail data to enhance business performance and customer experience. We worked with datasets that included orders, customers, sellers, products, and customer reviews. By analyzing purchase patterns, customer orders, and feedback, we aimed to identify trends, uncover insights, and make data-driven recommendations that could improve customer satisfaction and increase revenue. Skills used: NumPy, Pandas, Matplotlib, Plotly, Machine Learning, SQL

Tableau Developer • JULY 2014- JUNE 2016

Athena Chhattisgarh Power LTD(Contract) • Kharsia

Store Data Management using Tableau: -

This project involved using Tableau to create an interactive dashboard for managing store data, including sales, inventory, and customer behavior. The goal was to provide insights that could optimize inventory, improve sales performance, and better understand customer preferences. Key metrics visualized included total sales, stock levels, product trends, and profitability across different stores and regions.

Tableau Developer • FEB 2013- JUNE 2014

Monnet Spat & Energy LTD (Graduate Apprentice Trainee) – Kharsia

Sales Performance Dashboard: -

Developed an interactive Tableau dashboard to track and visualize sales performance across regions and product categories, enabling real-time insights into business trends and performance metrics." Skills -Tableau, SQL (for data querying), Excel (for data manipulation), Data sources: SQL databases, CSV files, etc.
