Career Objective:

ServiceNow Certified Professional with 5.2 years of hands-on experience in ServiceNow development and implementation, holding CSA, CAD, and CIS-DF certifications. Specialized in ITAM, SAM, HAM, ITSM, and Custom Application Development, with strong expertise in designing scalable solutions, automating business processes, and integrating ServiceNow capabilities to meet enterprise requirements. Proven ability to work across multiple ServiceNow modules, translate business requirements into efficient technical solutions, and deliver high-quality applications aligned with business objectives.

Professional Summary:

- Experience in IT Asset Management (ITAM) including Hardware Asset Management (HAM) and Software Asset Management (SAM), along with ITSM modules such as Incident Management, Problem Management, Change Management, and Service Catalog.
- Hands-on experience across the asset lifecycle: procurement, inventory, allocation, maintenance, normalization, reconciliation, and retirement.
- Worked on creating UI Policies, Data Policies, and UI Actions for ITAM and ITSM processes.
- Worked on SAM integrations with Microsoft and Adobe to support software discovery, entitlement, license consumption, and compliance data.
- Designed and developed Reports and Dashboards for asset tracking, compliance, and operational insights.
- Worked with Workflow Editor and Flow Designer, creating custom workflows for ITAM, HAM, SAM, and ITSM modules.
- Strong experience in creating and managing Service Catalogs, Record Producers, and Order Guides, including asset request and fulfillment workflows.
- Experience in creating Custom Tables and Custom Applications to support ITAM and business requirements.
- Experience in creating Email Notifications for asset lifecycle events and approvals.
- Experience in creating and managing Users, Roles, and Groups, including role-based access for ITAM users.
- Strong knowledge of Transform Maps, Import Sets, Update Sets, and ACLs.
- Worked on Import Sets using Transform Maps for asset data ingestion and CMDB/ITAM data population.
- Experience in data normalization and reconciliation activities to ensure accurate asset records.
- Worked on Client-side and Server-side scripting for asset automation and validations.
- Extensive experience with ServiceNow Glide APIs such as GlideRecord, GlideSystem, GlideAggregate, and GlideAjax.
- Knowledge of HTML, CSS, and JavaScript.
- Experience in REST integrations with third-party applications such as Salesforce and

- external asset sources.
- Actively involved in ServiceNow upgrade activities, including monitoring and resolving skipped records.
- Strong communication skills with effective collaboration with managers, stakeholders, and team members.
- Experience interacting with customers' business and technical teams to gather ITAM requirements and translate them into scalable technical solutions.
- Quick learner with the ability to adapt to new technologies and tools.

Technical Skills

- ☒ Service Now (ITSM,ITAM,HRSD),CSA,CAD,CIS-DF
- ☒ Languages: HTML, CSS
- ☒ Scripting: JavaScript

Education

- B.Tech at Madanapalle Institute Of Technology and Science at Madanapalle. (2019)

Professional Experience

1. I Worked as a ServiceNow Developer at Lytcone Technologies Private Limited since May-2021 to Dec-2024.
2. I Worked as a ServiceNow Custom Application Developer at Genpact India Private Limited From Dec 2024 to May 2025(with payroll Quess Corp Pvt Ltd).
3. I am working as a ServiceNow Developer at Deloitte USI since June 2025 to Present(with payroll of Solventek pvt ltd).

Project Profile

Project #1

Client: Weyerhaeuser Pvt Ltd

Role: ServiceNow Developer

Duration: June 2025 – Present

Project Description

The project focuses on implementing and enhancing IT Asset Management (ITAM) solutions, including Hardware Asset Management (HAM) and Software Asset Management (SAM), using ServiceNow. The objective is to automate asset lifecycle processes, improve asset visibility and compliance, and maintain accurate asset data through normalization and reconciliation. The solution supports end-to-end asset management from procurement through retirement while integrating with ITSM.

Roles & Responsibilities

- Implemented and enhanced ITAM, HAM, and SAM modules to manage the complete asset lifecycle, including procurement, inventory, allocation, maintenance, and retirement.
- Configured hardware and software asset models, categories, lifecycle states, and related configurations based on organizational requirements.
- Worked on SAM processes, including software license tracking, entitlement management, compliance monitoring, and license reclamation.
- Performed data normalization and reconciliation to maintain accurate and reliable asset and license data.
- Designed and developed Service Catalog items and Record Producers for asset requests, approvals, and fulfillment.

- Developed and maintained Business Rules, Client Scripts, UI Policies, and UI Actions to automate asset-related processes.
- Created reports and dashboards to provide visibility into asset utilization, compliance, and cost optimization.
- Worked with Import Sets and Transform Maps to import asset data from external systems and vendors.
- Implemented ACLs and role-based access controls to secure asset-related data.
- Participated in ServiceNow upgrade activities, including testing ITAM/SAM functionality and resolving skipped records.
- Collaborated with business stakeholders, procurement teams, and asset managers to gather requirements and deliver scalable ITAM solutions.
- Provided production support, troubleshooting, and continuous enhancements to ensure system stability and user satisfaction.

Project #2

Client: Genpact India Pvt Ltd

Role: ServiceNow Developer

Duration: December 2024 – May 2025

Project Description

The project focused on implementing and enhancing ServiceNow IT Asset Management (ITAM) capabilities, primarily across Software Asset Management (SAM), Hardware Asset Management (HAM), and Custom Applications. The solution was designed to automate asset-related processes, improve data accuracy, streamline software licensing and hardware lifecycle management, and support business-specific requirements through custom ServiceNow applications.

Roles & Responsibilities

- Worked on SAM and HAM implementations and enhancements based on business requirements.
- Configured and maintained software models, hardware models, asset records, categories, lifecycle states, and asset-related configurations.
- Worked on software entitlements, license compliance, software consumption, reclamation, and license tracking.
- Supported hardware asset lifecycle management, including procurement, inventory, assignment, transfer, maintenance, and retirement.
- Developed and configured Custom Applications to address business-specific asset management requirements.
- Designed and developed Service Catalog items, Record Producers, Variables, and Variable Sets for asset-related requests.
- Developed and maintained Business Rules, Client Scripts, UI Policies, UI Actions, and Data Policies.
- Designed and configured Inbound and Outbound Email Actions to automate business processes and notifications.
- Created customized notifications and email templates to improve communication between stakeholders.
- Worked with Import Sets and Transform Maps to import and transform asset and software data from external sources.
- Performed data validation, troubleshooting, and reconciliation to maintain accurate asset information.
- Created reports and dashboards to provide visibility into asset utilization, software compliance, and operational metrics.
- Participated in ServiceNow upgrade activities, including testing functionality and analyzing skipped records.

- Gathered requirements from business stakeholders and translated them into scalable ServiceNow solutions.

Project #3

Client: City Of Hope Pvt Ltd

Role: ServiceNow Developer

Duration: March 2023 – December 2024

Project Description

The project focused on implementing and customizing ServiceNow IT Asset Management (ITAM) capabilities, with primary emphasis on Software Asset Management (SAM), Hardware Asset Management (HAM), and Custom Applications. The solution supported end-to-end asset lifecycle management, software license compliance, asset data management, and business-specific automation through customized ServiceNow applications.

Roles & Responsibilities

1. Implemented and enhanced SAM and HAM functionalities, supporting end-to-end software and hardware asset lifecycle management.
2. Configured software/hardware models, asset categories, lifecycle states, entitlements, license allocation, compliance, consumption, and reclamation processes.
3. Worked on SAM integrations with Microsoft and Adobe to support software discovery, entitlement, license consumption, and compliance data.
4. Developed and customized ServiceNow Custom Applications based on business requirements.
5. Designed and developed Service Catalog items, Record Producers, Variables, Variable Sets, and Workflows for asset-related processes.
6. Developed and maintained Client Scripts, Business Rules, UI Policies, UI Actions, and Data Policies for business process automation.
7. Worked with Import Sets and Transform Maps to import, transform, and validate hardware, software, and asset data.
8. Configured ACLs, Users, Groups, and Roles to implement secure, role-based access to asset and application data.
9. Created Reports and Dashboards to provide visibility into asset utilization, software compliance, and operational metrics.
10. Participated in ServiceNow upgrade activities, including testing, monitoring, and resolving skipped records.
11. Used Update Sets to migrate configurations across development and testing environments.
12. Gathered requirements from business stakeholders and translated them into scalable technical solutions.
13. Provided production support, troubleshooting, and enhancements for SAM, HAM, integrations, and custom applications.

Project #4

Client: Inspire Sleep Pvt Ltd

Role: ServiceNow Administrator & Developer

Duration: August 2021 – February 2023

Project Description

The project involved implementing and customizing Incident Management, Problem Management, Change Management, and Service Catalog capabilities in ServiceNow for Loan Depot. The solution

focused on improving IT service management processes and automating request fulfillment through customized catalog items and workflows.

Roles & Responsibilities

- Configured and customized Incident, Problem, and Change Management modules based on business requirements.
- Developed and maintained Service Catalog items, Variables, Variable Sets, and Workflows for different business requirements.
- Gathered requirements from clients and translated them into technical solutions and catalog configurations.
- Developed Business Rules, Client Scripts, UI Actions, and UI Policies to implement business requirements.
- Used HTML, CSS, and JavaScript to enhance ServiceNow user interfaces and form experiences.
- Worked with Import Sets, Transform Maps, and data imports to migrate and load data into ServiceNow.
- **Platform Roadmap Ownership:** Contributed to the ServiceNow platform roadmap by identifying ITAM, SAM, HAM, and ITSM enhancement opportunities, prioritizing automation and process improvements based on business requirements.
- **Platform Enhancement Planning:** Worked with business and technical stakeholders to define and prioritize ServiceNow enhancements, including custom applications, Service Catalog workflows, integrations, and asset lifecycle improvements, ensuring alignment with long-term platform objectives.
- Created and configured SLAs and Email Notifications to support IT service processes.
- Configured Forms, Lists, and related table configurations according to business requirements.
- Created and administered Users, Groups, and Roles.
- Participated in ServiceNow upgrade activities, including monitoring and analyzing skipped records.
- Used Update Sets to migrate configurations from development to testing environments.
- Performed testing and troubleshooting of configurations and customizations to ensure solution quality.
- Collaborated with stakeholders to understand requirements and deliver ServiceNow solutions aligned with business needs.

Micro Certification:

- **ServiceNow Micro-Certification – Flow Designer:** Hands-on experience designing automated workflows, approval processes, and reusable flows for ITAM, HAM, SAM, and ITSM processes.
- **ServiceNow Micro-Certification – Performance Analytics:** Experience developing dashboards, KPIs, and operational metrics for asset utilization, software compliance, and IT service performance.

Declaration:

I hereby declare that the above details furnished by me are true to the best of my knowledge.
