

I need two senior Angular resources as per the below defined JD.

Mainly we are looking for an experienced (6-10 years) Java developer and if possible also experience in FE development is there.

For the UI&UX skills basic knowledge should be there.

- **Angular Front-End Expertise:**
 - Proficiency with Angular (latest versions), TypeScript, and RxJS
 - Strong understanding of Angular component architecture, modules, and dependency injection
 - Experience with state management solutions (e.g., NgRx) and reactive forms
 - Familiarity with common front-end tooling (Webpack, Angular CLI) and best practices
- **Web UI & UX Skills:**
 - Solid grasp of HTML5, CSS3, and responsive design principles
 - Experience integrating front-end design frameworks (e.g., Bootstrap, Material Design)
 - Knowledge of cross-browser compatibility and accessibility standards
- **Java & Spring Boot Back-End Expertise:**
 - Strong foundation in Java and object-oriented programming concepts
 - Experience developing RESTful APIs using Spring Boot, Spring MVC, and Spring Data JPA/Hibernate
 - Knowledge of Spring Security for authentication and authorization
 - Familiarity with microservices architecture and domain-driven design principles
- **Database & Persistence Layer:**
 - Proficiency with relational databases (e.g., MySQL, PostgreSQL) and SQL
 - Experience with JPA/Hibernate and database schema design
 - Basic knowledge of NoSQL databases (e.g., MongoDB) is a plus
- **Testing & Quality Assurance:**
 - Experience with unit testing (JUnit, Mockito) and integration testing on the back-end
 - Familiarity with front-end testing frameworks
 - Adherence to code quality standards, including code reviews, linting, and static analysis tools
