SUMMARY

📋 Certified Product Manager and Product Owner with 14 years of experience in Agile product development. Skilled in product strategy, roadmap planning, and leading cross-functional teams to deliver high-impact solutions. Strong expertise in product discovery, backlog ownership, stakeholder management, and value-driven delivery. Proven ability to translate complex business requirements into scalable, customer-centric products. Brings domain experience across banking (investment banking – capital markets), audit, US healthcare and enterprise platforms, with a focus on compliance and user-focused innovation.

🎓 EDUCATION

Eastern Academy Of Science & Technology, Bhubaneswar.,

B.E. : Electronics & Telecom

2002 – 2006 | Pune

IBS, PUNE,

MBA : Marketing Management

2009 – 2011 | Pune

🧠 SKILLS

- Product Management
- Product Road Map & Prioritization Product Discovery & MVP Definition Stakeholder Management
- Agile Methodology Product Ownership Backlog Management
- Scrum Ceremonies (Sprint Planning, Reviews & Demos)
- Value-Based Delivery & KPIs Epics, Features, User Stories, & Acceptance Criteria
- Story Mapping Vertical Slicing User Journey
- UX Collaboration & Functional Design

- Prompt Engineering Generative AI Agentic AI
- RAG (Chunking, Embedding, Retrieval)
- UAT & Release Readiness Data-Driven Decision Making Digital Transformation Investment Banking
- Capital Market - Equity Trading SWIFT
- Settlements US Healthcare

EXPERIENCE

Deloitte, Technical Product Manager

02/2020 – Present | Hyderabad

- Gather and analyze business requirements, owning & managing the product backlog aligned to business objectives & strategic priorities, serving as liaison between business stakeholders & technical teams
- Define product scope & roadmap across 6+ product versions, ensuring alignment with stakeholder expectations & organizational goals.
- Translate business requirements into clear epics, features & user stories in GHERKIN format using Behavior Driven Development (BDD) methodology.
- Lead product discovery sessions, requirement workshops, story mapping exercises, & backlog refinement with business & technology stakeholders using MoSCoW prioritization technique.
- Collaborate with UX, architecture, & engineering teams to validate solution designs & ensure feasibility.
- Lead the definition and delivery of AI-powered product capabilities, translating business problems into AI use cases, product requirements, epics, features, user stories and measurable acceptance criteria.
- Partner with AI/engineering and architecture teams to evaluate AI solution approaches, validate technical feasibility, define functional requirements and integrate intelligent capabilities into enterprise product workflows.
- Drive adoption of Generative AI, Agentic AI and RAG-based capabilities to improve automation, decision support, information retrieval and user experience across enterprise platforms.
- Define AI product requirements covering LLM-driven workflows, prompt engineering, RAG processes including chunking, embedding and retrieval, intelligent automation and AI-assisted decision-making.
- Collaborate with engineering and DevOps teams to support Azure-based product delivery and Azure DevOps, including backlog management, sprint planning, work-item tracking, release coordination, dependency management and delivery governance.

- Leverage Azure DevOps for product backlog ownership, epic/feature decomposition, user-story management, sprint execution, release tracking, defect management and visibility of delivery progress across distributed Agile teams.
- Use Azure DevOps dashboards and delivery metrics to monitor sprint progress, identify blockers and dependencies, track release readiness and provide delivery visibility to business and technical stakeholders.
- Lead Agile Scrum framework implementation, facilitate sprint planning, daily standups, sprint reviews, & retrospectives, ensuring readiness & clarity of backlog items.
- Drive end-to-end delivery ownership from ideation through development, UAT, & release, successfully delivering 6+ major product releases ensuring on-time delivery & stakeholder satisfaction.
- Program Increment (PI) demos & progress updates to 60+ senior stakeholders & technical team members, incorporating feedback into future iterations.
- Cloud data platforms & complying to best practices in data engineering
- Translate US Healthcare business and operational requirements into product roadmaps, epics, features, user stories and acceptance criteria, ensuring alignment with business objectives and healthcare stakeholder needs.
- Collaborate with business, technology, architecture and engineering stakeholders to define and deliver healthcare-focused digital and AI product capabilities, balancing business value, technical feasibility, user experience and compliance requirements.
- Lead AI product capabilities and development, collaborating with engineering teams to define AI-driven features, leverage predictive insights, and integrate intelligent automation into product workflows.
- Ensure solutions comply with data privacy, regulatory, & enterprise governance standards, especially relevant to financial, audit & US healthcare platforms.

G4S IT Services, Lead Product Analyst

12/2019 – 02/2020 | Hyderabad

- Works as a liaison between client & dev team.
- Client handling & eliciting business requirement.
- Following AGILE & preparing User stories & defects.
- PBI grooming, prepare Business Flow-diagram.
- Getting sign off on the prototypes & SRS in case of WATERFALL approach

- Conducting Functional Testing to assure quality of the application.
- Actively participate in SCRUM Ceremonies.
- Providing functional KT of the application to engineering team.

TEKsystems, Senior Business Analyst

05/2019 – 11/2019 | Pune

- Owned multiple digital & enterprise products, managing backlogs, priorities, & release plans in Agile environments.
- Partnered with business stakeholders to define product goals, success metrics, & incremental delivery plans.
- Lead requirement elicitation & product refinement workshops to break down complex initiatives into deliverable features
- .Ensured seamless collaboration between business & engineering teams for timely delivery.
- Conducted current-state vs. future-state analysis to support business transformation initiatives.
- Designed delivery dashboards to track sprint progress, supporting leadership visibility & measurable outcomes.
- Supported enterprise-scale rollouts, ensuring adoption, training readiness & business alignment.
- Supported engineering teams by preparing system documentation using MS Visio, and conducted functional testing and User Acceptance Testing (UAT) to validate application quality.

The Digital Group Infotech, Business Analyst

09/2012 – 05/2019 | Pune

- Works as a liaison between client & dev team.
- Client handling & eliciting business requirement.
- Following AGILE & preparing User stories & defects.
- PBI grooming, prepare Business Flow-diagram.
- Getting sign off on the prototypes & SRS in case of WATERFALL approach.
- Conducting Functional Testing to assure quality of the application.
- Actively participate in SCRUM Ceremonies.
- Providing functional KT of the application to engineering team.
- UAT & User Training to the business users, sending Release Notes.
- Change Management Process.
