

K Sreenivasulu

Synopsis: ETL Pipeline, Data warehouse, Big data testing and Data base testing –
Having 7+ years of total working Experience in Insurance, Banking and Healthcare domain- Having experience in manual testing

E-mail: sreenu777111@gmail.com

MOB: +919963025349

EXPERIENCE SUMMARY

- Having Work experience in Big Data-Hadoop Testing Technology Stack like HDFS, Hive, HBase and Sqoop, ETL Testing, and Database Testing.
- Involving in Functional Testing & Regression Testing and Data quality testing
- Involving in writing SQL queries and Database Checkpoints to verify data quality and calculations, reviews
- Performed data validation testing writing SQL queries
- Extensively worked with concepts of SQL like joins, Set operators
- Good experience in Data warehousing concepts.
- Supported the extraction, transformation, and load process (ETL DataStage) for a Data Warehouse from their legacy systems using DataStage.
- Strong knowledge in software development life cycle (SDLC), software testing life cycle. (STLC), Bug /Defect life cycle, Defect tracking and management.
- Familiar with SQL, BI tools, agile methodologies, and oracle data base.
- Having good knowledge of sql programs, procedure, function, and package.
- Good knowledge in Data warehouse.
- Aware about Data warehouse models like star schema, snowflake schema.
- Good knowledge in dimensions like SCD-1, SCD-2, SCD-3 and Fact table.
- Good knowledge in normalization and de-normalization concept.
- Expert knowledge in preparing test cases and test scenarios to test the business requirement.
- Expertise in defect tracking tools like JIRA.
- Good knowledge in manual testing.
- Knowledge in Analysis of Bug Severity, Bug tracking system and Bug Reporting.

Areas of Experience

Industries

Insurance, Banking and Healthcare

RDBMS

Oracle, HIVE, Impala, SQL ,AWS Synapse, Snowflake, Databricks, Pyspark .

Utility Tools

DataStage, ADF, TOAD, SQL developer, Python, DBeaver, SSMS, MYSQL

Operating Systems

Windows, UNIX

FTP

Putty, WinSCP

Defect Tracking Tools

JIRA, HPAMT, TFS

K Sreenivasulu

QUALIFICATION

M.B.A(Sri Venkateshwara university)
BSc (Computers) from Sri Venkateshwara university

WORK EXPERIENCE

- Worked as Software Engineer in UST Global Information technology, from Oct 2024 to still date.
- Working as System analyst in Hexaware, Chennai from Jan 2021 to Oct 2024.
- Worked as Senior QA Engineer in Quikr India Private LTD, Bangalore from Jun 2018 to April 2020.

Project Details

Project#4

Title : Data Origination Hub
Client : First Citizens Bank
Domain : Banking
Role : Data Engineer/QA Test Engineer
Period : Oct 2024 to Till
Environment : SSMS, MY SQL, Netezza, DataStage.
Tools/Techniques : ETL, IICS, Snowflake, Python, S3,ADF.
Team Size: :8

Description:

First Citizens Bank is a top 20 U.S. financial institution with over \$200 billion in assets, headquartered in Raleigh, NC. It offers a wide range of banking services, including personal and commercial banking, and is part of the larger financial holding company, First Citizens Bancshares, Inc. The bank was founded in 1898 and operates over 550 branches across the United States.

Responsibilities:

- Attend sprint Planning meeting with the Developers, Product owner and scrum master to understand scope of the user stories and to mitigate the risks involved in completing the tasks.
- To Understand the detailed design, business requirement, Source to Target mapping document.
- Attend Daily stand-up meeting with the Developers, BA and scrum master, to discuss about the status of the user stories.
- Understanding the transformation rules in mapping documents as per client requirements.
- Writing the test strategy and test plan document as per client requirement.
- Writing test cases based on Functional specs and business requirement documents.

K Sreenivasulu

- Execution of Test Cases and reporting the bugs through defect tracking tool.
- Validated data in Target database according to business rules
- Prepared SQL queries to validate the ETL processed data in target database.
- Validating the SCD-1 and SCD 2 type validation.
- Verifying the column mapping between source and target databases
- Providing UAT support, handling defect triage call and conducting root cause analysis.
- Preparing test data and validating test data
- Mapping sheet analysis.
- Analysis of test results and logging defects.

Project#3

Title : TMK_VBS_EBM_H&I
Client : Trustmark
Domain : Health care
Role : QA Test Engineer
Period : Jan 2022 to Oct 2024
Environment : SSMS, MY SQL, WINSQL
Tools/Techniques : ETL, Azure ADF, Azure Synapse,Python,Pyspark
Team Size: :12

Description:

Trustmark Voluntary Benefits offers **Life, Accident, Critical Illness, Disability, and Hospital insurance solutions** that help policyholders achieve greater financial security and well-being. For more than 100 years, Trustmark been building a different kind of benefits company, and going beyond the needs of our customers. *Trustmark* offers employee benefits that help businesses and employees thrive. *Trustmark's* solutions enhance wellbeing and provide greater financial.

Responsibilities:

- Attend sprint Planning meeting with the Developers, Product owner and scrum master to understand scope of the user stories and to mitigate the risks involved in completing the tasks.
- To Understand the detailed design, business requirement, Source to Target mapping document.
- Attend Daily stand-up meeting with the Developers, BA and scrum master, to discuss about the status of the user stories.
- Understanding the transformation rules in mapping documents as per client requirements.
- Writing the test strategy and test plan document as per client requirement.
- Writing the test cases based on Functional specs and business requirement documents.
- Execution of Test Cases and reporting the bugs through defect tracking tool.
- Validated data in Target database according to business rules
- Prepared SQL queries to validate the ETL processed data in target database.

K Sreenivasulu

- Validating the SCD-1 and SCD 2 type validation.
- Verifying the column mapping between source and target databases
- Providing UAT support, handling defect triage call and conducting root cause analysis.
- Preparing test data and validate test data
- Mapping sheet analysis.
- Analysis of test results and logging defect.
- Uploading test cases & Results in Tracker.
- Defect logging in Tracker

Project#2

Title : Argus_Data_Infrastructure_FPP_H&I
Client : Verisk
Domain : Banking
Role : Senior Software Test Engineer
Period : Jan 2021 to Jan 2022
Environment : AWS, Hive, MobaXtream
Tools/Techniques : Big Data QA - Hive 0.12.0.
Team Size: :8

Description:

WiZink is an online Bank, with presence in Spain and Portugal. The Bank offers retail banking products and services including deposits and savings accounts, credit cards, ATMs, and internet banking solutions. It maintains the historical and live data in database and generates different reports.

Responsibilities:

- Understanding the transformation rules in mapping documents as per client requirements.
- Writing the test cases based on Functional specs and business requirement documents.
- Execution of Test Cases and reporting the bugs through defect tracking in Excel.
- Validated data in Target database according to business rules
- Prepared SQL queries to validate the ETL processed data in target database.
- Verifying the column mapping between source and target databases
- Preparing test data and validate test data
- Uploading test cases & Results in Tracker.
- Defect logging in Tracker.

Project 1:

Title	: Supply Chain Analysis
Client	: <u>Quikr</u>
Domain	: Retail
Role	: Test Engineer
Period	: Jun 2018 to April 2020
Environment	: SQL, Manual testing
Tools/Techniques	: SQL, Application testing
Team Size:	:5

Description:

This project is related to the creation of retail data analytics layer for the analysis of Efficiency and Risks due to Excess and Shortage of inventories in the supply chain of E-Commerce industries. This also deals with the calculation of Optimal Inventories for each of the product falling in the supply chain.

Responsibilities:

- Understanding the customer requirements.
- Designed High level test scenarios and test cases.
- Executed test cases in QC.
- Preparing queries to validate the data from system and end to end testing perspective.
- To Understand the detailed design, business requirement, Source to Target mapping document.
- Preparing inventory details identify the shortage of inventories.
- Validated data in Target database according to business rules
- Prepared SQL queries and executed to validate the processed data in target database.
- Worked closely with Dev team
