Executive Profile

A versatile CSPO certified lead business analyst cum project manager with 15 years of experience in Project Management, Business Analysis (Techno Functional), **Reference/Trade Data On-boarding and Management (Instrument/Counter Party data), Data Remediation**, Transaction and Reg Reporting, etc.. I have worked on multiple initiatives catering to business transformation, client/counterparty data solutions, vendor on-boarding and legacy application decom. 9+ years of experience with leading investment banks such as UBS, Morgan Stanley and Fidelity Investments. In addition to this, I have 5+ years of experience with reference data vendors such as Thomson Reuters (Refinitiv) and IHS Markit (S&P) with a well-demonstrated track record in handling decom/migration projects for Fidelity, UBS and Morgan Stanley.

Professional Experience

1. eClerx Services Limited

Feb 2019 – Present

Associate Program Manager (Lead Business Analyst cum Project Manager)

A. Client : Internal (ECM : **eClerx Compliance Manager**) | (Project Manager/Lead BA)

Counter Party Data API Integration

- Identification of APIs for sourcing the counterparty SSI/reference data (LEI, legal name, legal extension, BIC code, etc.)
- Data modelling, FRD/tech artefacts creation for on-boarding API data
- **Data Remediation** : Built a reconciliation to compare API CP data vs the CP data sourced via RPA
- Project management (end-to-end planning and coordination with Dev and QA team, weekly reporting to higher management, etc.)

B. Client : HSBC (Strategy & Change : SSV & Market Ops)

Data Remediation: Recon Standardization and Rationalization (Project Manager/Lead BA)

- Identified opportunities to rationalize, consolidate & minimize duplication of reconciliations (Trade, Cash & Position)
- Optimization of IT platforms/systems and data feeds.
- Identification of missings critical data elements.
- Ensure completeness of reconciliations from control stand-point
- Recommendation pertaining to decom of redundant, duplicate recons.
- Recommendation to enhance match rates in SIRE (internal AI based tool)

C. Client : Morgan Stanley

1. Index/ETF Squad (Scrum Master Cum Project Manager/Lead BA)

As scrum master, I was managing all scrum ceremonies (daily scrum calls, backlog refinement, tech refinement, sprint planning and retrospective). Responsible for tracking the BoW progress, stakeholder management etc. while working as BA/PM on below mentioned projects

A. STOXX On boarding

- Working as Lead BA/PM on STOXX (Index data provider) on-boarding
- Responsible for end-to-end requirement gathering, vendor data analysis, data modelling, documentation, etc.
- Integration of multiple vendor files to create the golden copy
- Creation of cross referencing (X-ref) logic for golden copy creation
- Identification of impact of various corporate action events on indices and implementing the same basis data provided in vendor files
- Automated the map-gap analysis for data migration/decom using SQL, Unix
- Creation of project plan, data migration plan/run-book & other artifacts like BRD, FRD, Project Charter etc.
- Keeping a track of project timelines and highlight the risks and impediments, as required

B. MSCI & S&P (N6) API On-boarding (Project Manager/Lead BA)

- Worked on analysis required to integrate/onboard the new MSCI & S&P API
- Identification of various API end points required to be considered for fetching the desired index header and composition level data
- Impact analysis pertaining to various corporate action events and proposed implementation strategy for various index variants
- Responsible for end-to-end requirement gathering, vendor data analysis, data modelling, documentation, etc.
- Creation of cross referencing (X-ref) logic for golden copy creation

C. Index/ETF DQ Tool Enhancements

- Proposed and implemented various enhancements pertaining to Index/ETF data quality tool (Legion UI)
- Creation of wireframes for addition of new functionalities/attributes to be exposed on UI
- Coordination with key business stakeholders for getting their approvals on new designs/layouts

2. Legacy Application Decom (Scrum Master cum Project Manager/Lead BA)

- Working on automation (idea proposed by me) of comparative vendor analysis for multiple vendors via SQL, UNIX and Alteryx to ensure the smooth data on boarding from various vendors
- Automated (partially) the map-gap analysis for data migration/decom using SQL, Unix and AI/ML tools
- Creation of project plan, data migration plan/run-book & other artifacts like BRD, FRD, Project Charter etc.
- Keeping a track of project timelines and highlight the risks and impediments, as required

- Map-gap analysis for comparing the “As Is” and “To Be” state
- Mapping the data attributes from legacy application to new application
- Investigation of raw files from various vendors, identification of cross referencing (match and merge) logic
- Identification and implementation of transformation and business rule applicable for each attribute
- Proposal of vendor hierarchy on the basis of accuracy and completeness scores (confidence scores) pertaining to each vendor
- Ensuring that data model remains intact to ensure that there is no downstream impact
- Performing functional and UAT testing like creating test data, writing and executing test cases
- Writing test cases and performing the UAT
- Representing squad in working group, vendor governance meetings, acquiring BU approvals and sign-offs

3. EMIR (Derivatives Regulation) Sourcing and Recon Utility

- On boarding of EMIR data from Refinitiv
- Comparison of vendor data vs client’s internal master data
- Setting up frame work for various reports pertaining to EMIR
- Data modelling, artefact creation

4. Creation of Multi Source UI

- Worked on creation of a multi-source UI which enables ops users to perform a real time comparison of data from multiple vendors/sources such as Bloomberg, Refinitiv and Exchange Data Feeds

5. MIFID II Recon (Internal reference data vs ESMA/FCA data) - (Scrum Master Cum Project Manager/Lead BA)

- Created schema for on-boarding a complex data files from ESMA and FCA
- Decoding complex business logics from legacy system & replicating same logics on ESMA/FCA data.
- Use of data normalization, transformation for creating appropriate data models
- Created 10+ customized recon report for transaction reporting team
- Recon of 35 (simple) and 27 (complex) attributes through intellimatch.
- Analysis and onboarding of 20 complex/huge ESMA/FCA feed files (size ≈ 100GB) containing approx. 20 million rows and 180+ attributes in mongo DB
- Recon dashboard creation for displaying age wise exceptions at attribute level.
- Participated in Design Council Meetings and various vendor governance meetings
- Responsible for writing test cases and performing UAT

6. MIFID II – Direct Sourcing from ESMA/FCA (Scrum Master Cum Project Manager/Lead BA)

- Eliminating the dependency on external data vendor (Refinitiv) by alternatively sourcing the data directly from ESMA/FCA which is available free of cost.
- Data modelling, artefact creation.

7. Creation of Bulk Upload Utility (Scrum Master Cum Project Manager/Lead BA)

- A bulk upload tool was created to upload ESMA/FCA data in client's internal database
- This eliminated the ops dependency on QAPM to perform multiple backend update on daily basis
- Implementation of overrides while performing backend updates

8. SFTR Implementation (Scrum Master Cum Project Manager/Lead BA)

- Integration of reference data pertaining to SFTR into client's database
- RFB implementation on the basis of recommendations from transactions reporting team
- Data accuracy and completeness analysis performed for reportable attributes
- Enhanced instrument as well as entity level (LEI) data coverage by sourcing missing data from ANNA, Refinitiv, GLEIF and Bloomberg, LEI-ISIN mapping file & GLEIF LEI data file.

9. EBR Implementation (Scrum Master Cum Project Manager/Lead BA)

- On-boarding of reference data (from Rimes) pertaining to EBR into client's database
- Involved in artifact creation, data quality enhancement, GUI creation, writing and executing test cases (UAT)
- Implemented system based control that permits only "Authorized Benchmark" to be used by client for trade booking
- Mapped ≈ 48K indices from Equities & 20K from FI universe, enhanced RIC coverage from 75% to 95%

10. Manual Touch Reduction

- Aim was to reduce the manual effort by ops by reducing the exceptions generated via various reports/RFBs

2. Capgemini (Client : UBS)

June 2017 – Feb 2019

Senior Consultant (Lead Business Analyst cum Project Manager)

1. Classic Decom (End of Life- Reference Data Migration Project)

- Worked as a Project Manager/lead Business Analyst for "End of Life- Migration Project (Fixed Income/ Equities/ Derivatives)" wherein an old legacy application was decommissioned in multiple phases.
- Responsible for end to end delivery of the project, right from requirement gathering till go live.
- Creation and maintenance of Project Planning documentation and other artifacts
- Data Model creation, Identification of new attributes, placeholders and their mapping with respective feed for various asset classes/ financial regulations (EMIR, MiFID, FATCA, Volcker, SFTR)
- Requirement analysis and documentation – BRD, FRD, ARS and SDD creation.
- Performing functional testing and coordinating for UAT/SIT
- DQM/ Exception reports created for new application
- Performed map-gap analysis for various (to be migrated) asset classes
- Extensive use of SQL / Unix (beginner) for performing dummy migrations. Exploring ETL/Informatica for identifying mappings/ SQL logics at various levels.

2. FinFrag (OTC Derivatives Regulation)/HK Stamp Duty: Regulatory Data Onboarding from SIX Telekurs & HK Exchange

- Worked as a Project Manager/lead Business Analyst for onboarding of FinFrag and HK Stamp Duty data
- On boarded FinFrag data from SIX Telekurs and HK Stamp duty data from HK exchange files
- Creation of critical documents (BRD, FRD) and data modelling for onboarding feed files □ Created and executed the Project plan

3. European Benchmark Regulation (EBR) Implementation

- Worked as a lead BA/PM for onboarding of EBR data (pertaining to indices and benchmarks) from Rimes and Refinitiv (external vendors). Created and executed the Project plan
- Creation of documents like Project plan , BRD, FRD and did data modelling for onboarding feed files □ Identifying and resolving vendor data quality issues

3. IHS Markit

July 2013 – June 2017

AVP (Lead Business Analyst cum Project Manager)

1. Instrument Reference Data Enhancement/Automation Projects:

- Lead a team of 2 BAs and 2 developers responsible for delivering key enhancements pertaining to instrument/client reference data offerings of IHS Markit
- Creation of RFPs (Request for Proposal) to assist sales team while they are pitching for a client
- Publish daily RAG metrics/ detailed project updates/status to key stakeholders
- Proposing the logics/rules, triggers and validations to enhance data quality
- Design, implement, create test data and execute test cases
- Use of SQL, UNIX, EDM tool in various stages of analysis/testing
- Exposure to data vendors like Bloomberg, Refinitiv, Clearstream, Euroclear, SEDOL, ANNA & CUSIP web
- Creation of flowcharts/artifacts related to various enhancements performed by the team

2. Entity Reference Data Enhancement

- Analysis of proposed entities offering in comparison to similar offerings by other vendors/IBs.
- Build v/s Buy decision analysis on the basis of cost model provided by third party (proposed) vendors
- Data modelling, defining the logics, validations, rules pertaining to proposed entity attributes
- Also worked on automation of legal entity creation and sector classification from various sources

3. Automation (Internal derivation/sourcing) of Country of Risk (CoR) Values:

- Proposed and implemented the CoR derivation logic in IHS Markit
- This resulted in cost savings worth 2 FTEs
- CoR was derived basis country of Inc, domicile, headquarter location etc.
- Acted as a PM cum BA for the end-to-end implementation of this project

4. Fidelity Investments

May 2012 – July 2013

Associate Specialist (Business Analyst)

1. Reference Data Enhancement Projects (Analytics & Data Services/Reference Data team)

- Worked on enhancements pertaining to their internal reference data applications
- Requirement documents creation, testing and other BA related activities
- Worked as a BA for on boarding an external vendor (Kingland) for entity hierarchy data

2. Kingland Vendor On boarding (Counter party Data On boarding)

- Worked as a BA for end-to-end on boarding of an external vendor (Kingland) for counterparty data (legal name, legal ext, incorporation, domicile, parent subsidiary relationship/ownership data)

Thomson Reuters (Refinitiv)

July 2011 – Feb 2012

Corporate Actions Analyst

- Analysis of various corporate action events from the Reuters news feeds/exchange announcements.
- Creation/modification of various corporate action events in various Thomson Reuters products
- Handling of the client query related to the database of various corporate action events.

Certifications

- Certified Scrum Master (CSM)
- CSPO
- Claude AI (Anthropic)

Skills

• Project Management • Techno Functional Business Analyst • Product/Client Reference Data SME • Data Analysis • SQL • UNIX • Capital Markets • UAT • Leadership • Stakeholder Management • Data Modelling • Strategic Planning • Risk Management • Cross-Functional Collaboration • Agile • Vendor Management • Change Management • Root Cause Analysis

Education

2011 - M.B.A. (Finance) from International Institute of Professional Studies (IIPS), D.A.V.V., Indore
