

MD FAISAL

SENIOR SOFTWARE ENGINEER

Senior Full Stack Developer with 7+ years of experience designing and building scalable, distributed backend systems and modern front-end applications, with strong expertise in Java 21, Spring Boot, Domain-Driven Design (DDD), and event-driven architecture using Kafka and event-listener/webhook patterns. Experienced applying DDD to model complex hierarchical and relational domain structures, designing configuration-driven and versioned systems, and building REST APIs and Microservices that act as a foundation layer for multiple dependent services — across both JVM and Node.js ecosystems. Comfortable working across React.js front ends for data visualization, dashboards, and configuration interfaces, and collaborating with distributed, cross-functional teams.

PROFESSIONAL EXPERIENCE

Ontime Global Private Ltd.

Senior Software Engineer Aug 2025 – May 2026

Learning Mate Solutions Pvt. Ltd.

Senior Software Engineer Feb 2023 – May 2025

Dreamcare Developers Pvt. Ltd.

Software Engineer Jan 2019 – Dec 2022

SUMMARY OF SKILLS

- Strong expertise in Java 21 and Spring Boot for designing and building distributed backend microservices and RESTful APIs, using virtual threads to improve concurrency and throughput under load.
- Applies Domain-Driven Design (DDD) practices — bounded contexts, aggregates, and domain modules — to keep business logic decoupled from infrastructure concerns, across both Java/Spring Boot and Node.js/Nest.js services.
- Experience modeling complex hierarchies, relationships, and configuration-driven, versioned data models as a shared foundation layer for multiple dependent services.
- Hands-on experience with event-driven architecture, including Kafka for asynchronous service integration and webhook/event-listener patterns for lighter-weight async workflows.
- Skilled in React.js and TypeScript for building configuration UIs, dashboards, and data visualization interfaces integrated with backend REST APIs.
- Working knowledge of AWS cloud platforms, Docker, Kubernetes, and CI/CD pipelines (GitHub Actions, Jenkins) with Git-based source control.
- Strong systems-thinking and problem-solving skills, translating real-world business structures into system models in collaboration with product and domain experts.
- Proven leadership skills directing distributed/offshore engineering teams, with strong client and stakeholder handling across cross-functional, multicultural teams.
- Proficient in AI-assisted software development using GitHub Copilot, Cursor AI, ChatGPT, Claude AI, Gemini, and Amazon Q Developer.

EDUCATION

BCA

Dr. D.Y. Patil University, Pune

HSC

Karnataka Board

RELEVANT SKILLS

- Java 21
- Spring Boot
- REST APIs
- Domain-Driven Design (DDD)
- Event-Driven Architecture
- Kafka
- Microservices
- Distributed Systems
- React.js
- TypeScript
- JavaScript
- Redux
- Next.js
- Data Visualization / Dashboards
- SQL Server
- MongoDB
- AWS
- Docker
- Kubernetes
- CI/CD (GitHub Actions, Jenkins)
- Git
- System Design
- Low Level Design (LLD)
- Micro Frontend
- Module Federation
- Agile / Scrum
- Problem Solving
- Leadership
- Client / Stakeholder Handling

AI-ASSISTED DEVELOPMENT TOOLS

- GitHub Copilot
- Cursor AI
- ChatGPT
- Claude AI
- Gemini
- Amazon Q Developer
- Windsurf IDE
- Continue.dev
- Codeium
- Tabnine

PROJECT DETAILS

Project 1 || Telecommunications Platform

Senior Software Engineer | Offshore Team Lead Aug 2025 – May 2026

Description: Enterprise-scale telecommunications application for Verizon Business customers, built with Micro Frontend and Microservices architecture, enabling customers to manage business network services, monitor connectivity, configure enterprise solutions, and access digital self-service capabilities.

Responsibility:

- Led and coordinated an offshore team of developers, ensuring successful sprint execution and on-time delivery of project milestones.
- Partnered with business stakeholders, architects, and product owners to gather requirements and translate real-world business and network structures into system models.
- Drove System Design and Low-Level Design (LLD) discussions, applying Domain-Driven Design (DDD) principles to model complex hierarchies and relationships across network and billing domains.
- Developed and maintained backend microservices and REST APIs using Java 21 and Spring Boot, leveraging modern language features (records, pattern matching, and virtual threads) to improve concurrency, service performance, and maintainability.
- Implemented event-driven integrations using Kafka to support asynchronous processing and consistency across multiple dependent services.
- Built and maintained Micro Frontend applications using React.js, TypeScript, and Module Federation, improving modularity and independent deployability.
- Designed and built ETL and batch-processing microservices with Node.js to extract, transform, and load network usage and billing data across enterprise systems on a scheduled basis.
- Integrated an AI-powered chatbot into the customer self-service portal to automate common support queries and cut down manual ticket volume.
- Conducted code reviews and mentored team members to raise development standards across the team.
- Managed source code through Git workflows and supported CI/CD deployment pipelines in partnership with QA and DevOps.

Technology Stack: React.js, TypeScript, Node.js, Java 21, Spring Boot, Kafka, REST APIs, Domain-Driven Design, Event-Driven Architecture, Microservices, ETL Pipelines, Micro Frontend, Module Federation, System Design, LLD

Project 2 || MyEdio (E-Learning Platform)

Senior Software Engineer Feb 2023 – May 2025

Description: Scalable EdTech platform enabling students and professionals to access online courses, coding exercises, assessments, learning resources, job opportunities, and analytics, built with React.js on the frontend and .NET Core Microservices with Entity Framework on the backend.

Responsibility:

- Developed responsive, reusable UI components using React.js, React Hooks, and Material UI for course catalogs, learner dashboards, and assessment screens.
- Integrated frontend applications with .NET Core Microservices through RESTful APIs to power course enrollment, progress tracking, and certification workflows.
- Modeled hierarchical and relational database schemas using the Entity Framework Code-First approach for courses, assessments, learning resources, and job-opportunity modules.
- Designed and optimized complex SQL Server queries and stored procedures to support learner analytics and reporting dashboards at scale.
- Authored a SQL Server stored procedure and scheduled it as a daily SQL Server Agent job to automatically refresh learner-progress and course-analytics data without manual intervention.
- Worked with Redis caching alongside SQL Server to improve response times for frequently accessed course and catalog data.
- Collaborated with Product Owners, QA Engineers, Architects, and DevOps teams in Agile Scrum environments; used GitHub for source control, code reviews, and release management.

Technology Stack: React.js, JavaScript, Redux Toolkit, .NET Core Microservices, Entity Framework, SQL Server, SQL Server Agent Jobs, Redis, REST APIs

Project 3 || Health Manager

Software Engineer Feb 2021 – Dec 2022

Description: Healthcare management application for handling products, warranties, and multi-file image uploads, with hierarchical category/subcategory configuration, custom file pickers, and real-time form validation. Integrated Google Analytics for user tracking, Redux Toolkit and RTK Query for state and API management, and AWS S3 for drag-and-drop file uploads.

Responsibility:

- Developed responsive and reusable UI components using React.js, JavaScript, HTML5, CSS3, and Material UI, including hierarchical category/subcategory configuration screens.
- Adopted Next.js for server-rendered, patient-facing pages, improving SEO and initial load performance for the hospital's public-facing modules.
- Developed modular backend services using Nest.js to structure appointment scheduling and billing logic with dependency injection and clean, testable architecture.
- Built and maintained additional backend REST APIs using Node.js and Express.js, integrating with MongoDB and AWS S3 for file storage and retrieval workflows.
- Developed RESTful APIs for patient registration, appointments, billing, medical records, and reporting modules.

- Applied Domain-Driven Design principles within Nest.js, structuring business logic into bounded modules — appointments, billing, patient records — with clear domain boundaries via dependency injection.
- Implemented event-driven, asynchronous processing (webhook notifications and Node.js event listeners) for workflows such as file-upload processing and status updates.
- Implemented role-based access control and secure authentication for administrators, doctors, nurses, and hospital staff.

Technology Stack: React.js, Next.js, Nest.js, Node.js, Express.js, MongoDB, Redux Toolkit, RTK Query, REST APIs, AWS S3, Domain-Driven Design, Event-Driven Architecture

Project 4 || Internet Banking System

Software Engineer Jan 2019 – Dec 2020

Description: Internet Banking System integrating the various levels of interaction between the bank and its customers, providing the necessary interface for customers to avail banking services online.

Responsibility:

- Designed and implemented responsive user interfaces using React.js, Material UI, HTML5, CSS3, and JavaScript.
- Migrated key frontend modules to Next.js to enable server-side rendering, improving initial page load performance for banking dashboards.
- Built backend REST APIs using Nest.js alongside Express.js, introducing a modular, testable service architecture for banking transaction workflows.
- Leveraged Next.js API routes for lightweight backend endpoints supporting account summary and transaction history features.
- Built reusable and dynamic frontend components using React Functional Components and Hooks; managed application state using Redux and Redux Toolkit.
- Collaborated with cross-functional teams following Agile Scrum methodologies.
- Integrated frontend applications with backend services using Axios and REST APIs.
- Structured backend services using Nest.js modules following Domain-Driven Design principles, separating account, transaction, and authentication logic into bounded domain modules.
- Implemented event-driven notifications (webhooks and event listeners) for transaction and account activity updates, decoupling notification handling from core transaction logic.

Technology Stack: React.js, Next.js, Nest.js, Redux, JavaScript, Node.js, Express.js, MongoDB, Mongoose, REST APIs, GitHub, Postman, Domain-Driven Design, Event-Driven Architecture

CORE STRENGTHS

- Skilled in designing distributed, event-driven backend systems using Java 21, Spring Boot, and Kafka, applying Domain-Driven Design (DDD) to model complex business domains.
- Applies DDD consistently across ecosystems — bounded contexts and domain modules in Spring Boot as well as Nest.js — keeping business logic decoupled from infrastructure and framework concerns.
- Experience building configuration-driven, versioned data models and hierarchical/relational structures that act as a foundation layer for multiple dependent services.
- Comfortable designing event-driven workflows at different scales, from Kafka-based service integration to lightweight webhook/event-listener notifications.
- Full-stack versatility across React.js/Next.js front ends (including data visualization and configuration UIs) and Java/Node.js/.NET backends.
- Comfortable translating real-world business structures into system models in collaboration with product and domain experts.
- Proven leadership directing offshore/distributed engineering teams, with strong stakeholder and client handling across cross-cultural, geographically distributed teams.
- Strong systems-thinking and problem-solving abilities, balancing flexibility versus control in configuration-heavy systems.
- Working knowledge of AWS cloud, Docker, Kubernetes, and Git-based CI/CD pipelines for automated, version-controlled deployments.
- Writes clean, well-documented, testable code and participates actively in code reviews to maintain quality and share knowledge within the team.
- Early adopter of AI-assisted engineering practices (GitHub Copilot, Cursor AI, ChatGPT, Claude AI, Gemini, Amazon Q Developer) to speed up coding, debugging, and documentation.
- Comfortable working across banking, healthcare, EdTech, and telecom domains, adapting quickly to new business rules and compliance needs.
