SUMMARY

Detail-oriented Data & Business Analyst with 7+ years of experience, including 4+ years in model validation across regulatory and credit risk models. Proven expertise in CCAR, CECL, and IFRS9, with strong command of Python, SQL, SAS, PySpark, and Tableau.

CORE SKILLS

- Python
- NumPy
- Pandas
- SQL
- Machine Learning
- Statistics
- Dash
- Plotly
- SAS
- PySpark
- Tableau
- Model Validation
- Data Visualization
- CCAR / CECL / IFRS9
- Credit Scoring (PD, LGD, EAD)
- XGBoost (ML)
- Stress Testing
- Backtesting
- AUCROC / KS / PSI

EDUCATION

PGP – Data Science & Engineering

Great Learning | Nov 2019 – Oct 2020

B.E – Electronics & Telecom

K.C. College of Engineering | 2010 – 2014

CERTIFICATIONS

- PGP in Data Science & Engineering
- SQL for Data Analytics – Udemy

PROFESSIONAL EXPERIENCE

Assistant Manager – Model Validation

Genpact | Bengaluru, Karnataka

Feb 2022 – Present

- ▶ Validated CCAR regression, error correction, and time series models covering sensitivity analysis, stress testing, and backtesting using MAE, MSE, and MAPE metrics.
- ▶ Performed independent validations of loss forecasting models for CCAR/Stress Testing including conceptual soundness, model performance, scenario analysis, and implementation verification.
- ▶ Provided full-scope validation of Scorecard models for risk ranking and decision-making using AUCROC, KS, and PSI metrics.
- ▶ Implemented IFRS9 & CECL models using PySpark on client Workbench and Zeppelin to compare model parameters, variables, and calculations.
- ▶ Developed Dash-based interactive dashboards for model monitoring and performance reporting.
- ▶ Automated Annual Review Reports by importing model results directly into Word via Python, significantly reducing manual effort.
- ▶ Leveraged NumPy and Pandas extensively for data manipulation, statistical analysis, model output processing, and automating data pipelines across validation workflows.
- ▶ Documented findings on conceptual soundness, implementation testing, sensitivity analysis, and backtesting.
- ▶ Created closure memos for Issues Requiring Attention (IRAs) and raised JIRA tickets for full audit trail coverage.

Data Operations Analyst

HDFC Bank | Mumbai, Maharashtra

Jan 2021 – Feb 2022

- ▶ Evaluated technical accuracy of deployed models across all retail and SME portfolios.
- ▶ Independently tested accuracy of credit scores, deployment logic, and performance definitions through data extraction, variable transformation, and model replication.
- ▶ Utilized Oracle, IBM Netezza, DB2, and Python (Jupyter, NumPy, Pandas) for data operations, variable transformation, and model replication.

LSMR & RAN Engineer

Reliance Jio Infocomm Ltd | Mumbai, Maharashtra

May 2017 – Nov 2019

- ▶ Managed integration & configuration of 2.5+ lakh eNodeB sites PAN INDIA including Macro, Micro, Outdoor Small Cells, and IBS sites.
- ▶ Performed troubleshooting of LSMR, MCE, VOMA, and Scheduler systems across all 22 telecom circles.

RF & DTS Lead

Reliance Jio Infocomm Ltd | Mumbai

Oct 2015 – May 2017

- ▶ Independently resolved network issues for assigned zone with high reliability.
- ▶ Conducted LTE network testing across multiple parameters and generated Actix performance reports.

ROLES & RESPONSIBILITIES

LANGUAGES

English • Hindi • Marathi

PROFILES

- [Kaggle](#)
- [Tableau Public](#)
- [GitHub](#)

Genpact | Assistant Manager – Model Validation | Feb 2022 – Present

- ▶ Independently validated CCAR regression and time series models — evaluated forecast accuracy, stress scenario behaviour, and backtesting results using error metrics like MAE, MSE, and MAPE.
- ▶ Carried out end-to-end validation of loss forecasting models under CCAR/Stress Testing — covering model logic review, performance benchmarking, and implementation correctness.
- ▶ Assessed Scorecard models for credit risk ranking — tested discriminatory power and population stability using AUCROC, KS statistic, and PSI across multiple segments.
- ▶ Verified IFRS9 and CECL model implementations on PySpark — cross-checked parameter values, variable definitions, and computation logic against expected model specifications.
- ▶ Built interactive dashboards using Plotly Dash to track model performance KPIs and flag anomalies for ongoing model monitoring.
- ▶ Streamlined validation reporting by automating the generation of Annual Review Reports using Python, directly embedding model outputs into structured Word documents.
- ▶ Utilised NumPy and Pandas to process large validation datasets — performed statistical computations, data transformations, and pipeline automation across CCAR and IFRS9 workflows.
- ▶ Maintained model governance documentation — prepared IRA closure memos and logged audit trails via JIRA for all validation findings and remediation actions.
- ▶ Led deep-dive independent validations of advanced ML models — XGBoost and Transformer-based — within the MRM framework for critical underwriting and credit decisions.
- ▶ Assessed mathematical robustness of XGBoost classifiers — validated train-test integrity, cross-validation design and hyperparameter sensitivity prior to production deployment.
- ▶ Produced MRM validation reports covering algorithmic assumptions, mathematical derivations, implementation gaps, and model risk ratings — escalating IRAs for models not meeting production-readiness standards.

HDFC Bank | Data Operations Analyst | Jan 2021 – Feb 2022

- ▶ Tested deployed credit models across retail and SME portfolios — verified score accuracy, deployment logic, and performance definitions against development benchmarks.
- ▶ Reconstructed scorecard model logic from scratch — replicated variable transformations and score calculations to independently confirm deployment correctness.
- ▶ Used Oracle, IBM Netezza, DB2, and Python (NumPy, Pandas) for data extraction, transformation, and model replication tasks across multiple portfolio segments.
- ▶ Reviewed feature engineering pipelines and algorithmic assumptions of ML-based credit scoring models to confirm conceptual soundness and intended-use alignment.
- ▶ Back-tested ML-driven underwriting models to verify PD stability and mathematical robustness across different economic periods and borrower cohorts.

KEY ACHIEVEMENTS

- ▶ **CCAR Model Validation:** Collaborated with team to discontinue underperforming models through rigorous validation. Successfully validated and implemented a predictive model that reduced forecast error by 19%.
- ▶ **Model Accuracy Scoring:** Evaluated technical accuracy of production models and proactively raised Issues Requiring Attention (IRAs), improving overall model governance.
