PROFESSIONAL SUMMARY

Enterprise AI Engineer with **8+ years** across NLP, Health Care, Media, OTT Platforms, semantic search, and production-grade GenAI systems. **3+ years building enterprise Gen AI & RAG platforms**, multi-agent AI workflows, and LLM-powered applications using LangChain, LangGraph, AutoGen, FastAPI, and vector databases, MCP servers, fine-tuned domain models and HIPAA-compliant pipelines. Experienced in architecting scalable AI orchestration pipelines, enterprise compliance automation systems, and AI-driven content generation workflows.

EXPERIENCE

AI Tech Lead · Cyient

Apr 2026 – Present · Hyderabad, India.

- Architecting enterprise AI Agent workflows and scalable orchestration systems leveraging LangGraph and RAG design patterns.
- Leading technical discussions around AI workflow integration, backend architecture, and reusable AI platform capabilities.
- Mentoring AI engineers on prompt engineering, vector search systems, and scalable AI deployment practices.

Deputy Manager – AI · Reliance JIO

Aug 2022 – Apr 2026 · Hyderabad, India

- Architected enterprise RAG-based Semantic Search platform using E5 embeddings, FAISS indexing and cross-encoder reranking serving **50M+ JIO users** with **40% reduction in search latency**.
- Led a team of **4 engineers** to build multi-agent JIO Email Automation Platform for JIO Fiber, Internet and Set-Top Box — classifying customer complaints across **10+ categories** using LangChain, LangGraph and AutoGen processing **50,000+ support emails/month**.
- Built RAG pipeline fetching resolution documents from vector database, auto-drafting personalized response emails via GPT-4.1 to reduce resolution time from **1 day to 2 hours** cutting manual triage effort by **75%**.
- Led delivery of JIO AI-Powered Hyperlocal Ad Generation Platform with 4 specialized agents — scanning competitors within **5km radius** via Maps API and MCP servers, generating newspaper and fence ad creatives via **Google Gemini Nano** and **16-second promotional videos via Google Veo 3.1** across **500+ business campaigns**.
- Designed JIO Multilingual Voice Assistant Bot supporting **5+ Indian languages** integrating Deep Learning STT, LLM chatbot using Llama V2 and LangChain and GlowTTS pipeline achieving **89% intent recognition accuracy**.
- Designed scalable FastAPI microservices for semantic retrieval and automated validation workflows supporting large-scale document corpus across JIO Email and Search platforms.

Associate AI Engineer · Legato Health Technologies (Carelton Global Solutions)

Sep 2020 – Aug 2022 · Hyderabad, India

- Built **Intelligent AppBot Review System** NLP pipeline performing sentiment analysis on user app comments, auto-detecting bugs via context-aware models, and auto-raising and assigning IT tickets reduced manual app review effort by **60%** and cut average ticket assignment time across enterprise healthcare clients.
- Engineered **Healthcare Document Template Analysis platform** using YOLO V5 and TensorFlow Object Detection (TFOD) on AWS SageMaker processed **1000+ healthcare PDFs**, annotated training data via LabelImg, trained and benchmarked models achieving mAP of 80% integrated into enterprise Cognitive platform ML pipeline supporting different document types.
- Delivered **Intelligent Meeting Transcription Tool** full pipeline processing Webex recordings through Google Speaker Diarization and NVIDIA Jasper Seq2Seq STT implemented SyncNet (MTCNN) for speaker face + lip detection and Hough line transformation for PPT/DOCX screen content extraction auto-generating meeting minutes with **80% transcription accuracy** all pipelines built in compliance with **HIPAA standards** for PHI/PII data handling.
- Built transformer-based summarization pipeline and React UI (login, upload, dashboard) for Transcription and AppBot tools deployed across 2 healthcare enterprise clients processing **250+ meeting recordings/month**.

Data Scientist – Computer Vision · NVIDIA Graphics India Pvt Ltd

Sep 2017 – Dec 2019 · Hyderabad, India

- Applied Computer Vision for Object Detection and Path Detection pipelines supporting NVIDIA's Autonomous Vehicle (AV) systems worked across multiple AV modules including road object detection and lane/path detection.
- Generated and curated training datasets for AV models performed data mining and feature extraction to support model development and improvement cycles.
- Developed and maintained Quality Assurance procedure documentation for dataset validation workflows monitored dataset quality and provided structured feedback to improve labelling accuracy.

TECHNICAL SKILLS

- **GenAI & LLMs:** LangChain, LangGraph, AutoGen, MCP Servers, RAG, Prompt Engineering, Multi-Agent Systems, Agentic AI, OpenAI GPT-4.1, Llama, Mistral, BERT.
- **Fine-Tuning:** LoRA, QLoRA, SFT, Hugging Face Transformers, PEFT.
- **ML & NLP:** Transformers, TensorFlow, PyTorch, Deep Learning, NLP, OCR, Computer Vision, Speaker Diarization.
- **Backend & APIs:** Python, FastAPI, Flask, REST APIs, Microservices, Async Python, PostgreSQL.
- **Vector & Databases:** FAISS, Pinecone, MongoDB, ChromaDB, Azure AI Search.
- **Cloud & DevOps:** Azure OpenAI, Azure Cognitive Services, AWS SageMaker, GCP, Docker and CI/CD.
- **AI Coding Tools:** Cursor, GitHub Copilot, Claude Code.

CERTIFICATIONS & RECOGNITION

- **Certifications:** Professional Data Science — Imarticus / Genpact / NSDC · Professional Machine Learning — Imarticus / IBM / NSDC · Deep Learning: Advanced NLP & RNN — Udemy · Deep Learning: Advanced Computer Vision & GAN — Udemy
- **Recognition:** Technical Reviewer — Apress Publications · Two-time Anthem Impact Award — Legato Health Technologies

EDUCATION

B.Tech – Computer Science & Engineering: CMR Technical Campus (2013 – 2017)
