

MOHAMMED ABBAS

Total Experience - 20+Years

Mobile: +919940370084 Email: abbas4322@gmail.com

PMP Certified Program Manager with more than 15+ yrs of exp with global Top 5 clients such as Citi Bank, OpenBank, AT&T, Chevron and many more.

KEY STRENGTHS

- **Program Management** - Hands on Experience in Waterfall & Agile methodologies with in-depth knowledge of banking business process.
- **Assured confidence** - High self-esteem supported by unshakeable belief in self; approach every task honestly, sincerely and efficiently.
- **Demonstrable leadership skills** - Competent interpersonal dynamics and effective delegation abilities; a team player who can share responsibilities and achievements.
- **Ability to complete tasks well before schedule** - understand specifications clearly, use tools smartly and adhere to quality standards, ensuring errorless deliveries.
- **Excellent communication skills** - proficiency in making presentations and deftly creating interest in the audience.

IT EXPOSURE

- | | |
|---------------------|--|
| → PRIMARY EXPERTISE | Program Manager (Agile & Waterfall) |
| → Tools | Microsoft Project, Jira, Confluence, Trello. |
| → CERTIFICATION | PMP, SAFe & CSM (Scrum Master) certified. |
| → TECHNOLOGY SKILLS | JAVA, J2EE, Full Stack, C++, SAP, T24, Oracle Apps |

WORK EXPERIENCE

Program Manager @ TATA CONSULTANCY SERVICES

October 2019 - Present. (7 Yrs)

- | | |
|---------------|-------------------------|
| → Client | : Citi Bank, USA |
| Domain | : Banking |
| Program Title | : AI & Fraud Prevention |

Led the enterprise-wide implementation of AI-powered fraud detection and prevention capabilities across Citi Bank's digital payments ecosystem, leveraging machine learning models to identify suspicious transactions in real time. The initiative focused on integrating advanced analytics into the core banking and card platforms, enabling proactive fraud alerts, reducing false positives, and ensuring compliance with U.S. regulatory requirements for consumer protection. By delivering these outcomes, the program strengthened transaction security, reduced fraud-related losses, and enhanced customer trust in digital banking services.

Roles & Responsibilities - [As Program Manager]

- **Strategic Program Execution:** Directed the end-to-end lifecycle of integrating advanced machine learning models into the core banking switch, enabling real-time identification and blocking of suspicious transactions with a latency of under 200 milliseconds.
- **Fraud Loss Mitigation:** Delivered a projected \$15M+ in annual savings by proactively detecting fraudulent patterns, significantly reducing chargebacks, operational charge-offs, and customer reimbursement liabilities.
- **Operational Efficiency & Customer Experience:** Drove a 30% reduction in false positive alerts by optimizing ML model parameters and refining threshold rules, which minimized unnecessary transaction declines and reduced manual fraud analyst review workloads by 25%.
- **Regulatory Compliance:** Ensured 100% adherence to U.S. consumer protection regulations (Regulation E and Fair Credit Billing Act) by establishing robust model validation frameworks, audit trails, and transparent consumer alert protocols.

- **Cross-Functional Leadership:** Orchestrated collaboration between Data Science, Core Engineering, Operations, and Legal/Compliance teams to align technical deliverables with business objectives, successfully delivering Phase 1 of the initiative 10% ahead of the projected timeline.
- **Stakeholder Governance:** Acted as the primary liaison to Executive Steering Committees, translating complex model performance metrics (AUC-ROC, precision/recall) into actionable business insights to secure continued funding and board approval for subsequent rollout phases.
- **Process Re-engineering:** Redesigned legacy fraud escalation workflows to accommodate new AI-driven insights, cutting average investigation resolution time by 40% and improving overall case management efficiency.

IMPACT & RESULTS

- **\$15M+ Annual Savings:** Reduced fraud-related losses through proactive detection and blocking of suspicious transactions.
- **30% Reduction in False Positives:** Minimized unnecessary transaction declines and improved customer experience through ML model optimization.
- **40% Faster Investigations:** Accelerated case resolution through redesigned workflows and AI-driven insights.
- **25% Reduction in Analyst Workload:** Decreased manual review burden on fraud investigation teams.
- **100% Regulatory Compliance:** Achieved flawless adherence to Reg E and FCBA with zero audit findings.
- **10% Early Delivery:** Completed Phase 1 ahead of schedule, securing board approval for enterprise-wide expansion.
- **Sub-200ms Detection:** Enabled real-time fraud identification with near-instantaneous latency.

 Domain : Banking
 Program Title : Digital Banking Cloud Enablement.

Led the enterprise-wide migration of Citi Bank's customer-facing applications to a hybrid cloud architecture (AWS + private cloud), modernizing legacy systems through containerization and cloud-native practices. The program enhanced scalability, resilience, and digital service delivery velocity while ensuring full compliance with PCI-DSS and U.S. financial regulations. Delivered measurable outcomes including 20% infrastructure cost reduction, 99.99% system uptime, and accelerated innovation in customer experience.

Key Roles & Responsibilities - [As Program Manager]

- **Strategic Program Leadership:** Directed the end-to-end migration lifecycle of critical customer-facing applications to hybrid cloud platforms, establishing a scalable, future-ready architecture aligned with Citi's digital transformation roadmap.
- **Program Governance & Planning:** Defined program scope, multi-phase migration roadmap, success KPIs, and risk mitigation strategies—orchestrating seamless transition of high-priority workloads while ensuring zero customer-impact downtime.
- **Cross-Functional Orchestration:** Led collaboration across IT Infrastructure, Cloud Engineering, Application Development, Security, and Compliance teams to ensure secure, compliant migration while managing vendor partnerships for containerization (Docker/Kubernetes) and cloud-native enablement.
- **Risk & Compliance Management:** Ensured 100% adherence to PCI-DSS and U.S. financial regulations by establishing robust security controls, encryption protocols, data governance frameworks, and comprehensive audit trails throughout the migration journey.
- **Performance Validation & Scale:** Oversaw pilot migrations with rigorous performance benchmarking, validated system resilience and application readiness, and successfully scaled

the solution across multiple portfolios—achieving a 20% reduction in infrastructure costs and 99.99% system uptime.

- **Vendor & Partner Management:** Managed strategic vendor relationships for cloud infrastructure, containerization tools, and professional services, negotiating contracts and ensuring delivery against SLAs and program milestones.
- **Executive Stakeholder Engagement:** Served as the primary liaison to Executive Steering Committees and Board-level sponsors, translating technical migration metrics into clear business value propositions to secure continued funding and organizational buy-in.
- **Change Management & Adoption:** Led organizational change initiatives to drive cloud-native adoption across development teams, implementing CI/CD pipelines and DevOps practices to accelerate feature releases and innovation cycles.

PROGRAM IMPACT & RESULTS

- **20% Infrastructure Cost Reduction:** Modernized legacy applications through containerization and cloud optimization, significantly lowering operational and maintenance expenses.
- **99.99% System Uptime:** Implemented resilient hybrid cloud architecture, ensuring near-perfect availability for Citi's digital banking services.
- **Accelerated Innovation:** Enabled faster feature releases and digital service delivery through cloud-native practices and automated CI/CD pipelines.
- **100% Regulatory Compliance:** Maintained flawless adherence to PCI-DSS and U.S. financial regulations with zero audit findings.
- **Zero Business Disruption:** Executed phased migration with rigorous pilot validations and rollback strategies, ensuring seamless customer experiences throughout the transformation.

→ Client : Citi Bank, USA
Domain : Banking
Program Title : Green Banking & ESG Transformation Program

Led the enterprise-wide Green Banking initiative to digitize paper-based processes and embed ESG (Environmental, Social, Governance) compliance into Citi Bank's retail banking operations. The initiative focused on reducing paper usage, enabling e-statements, and integrating sustainability metrics into customer reporting. By delivering these outcomes, the program supported Citi Bank's ESG commitments, improved operational efficiency, and enhanced customer perception of sustainable banking practices.

Roles & Responsibilities - [As Program Manager]

- **Strategic Program Execution:** Directed the end-to-end implementation of digital transformation initiatives across retail banking operations, replacing paper-intensive processes with sustainable digital alternatives to reduce environmental footprint and operational costs.
- **ESG Integration:** Embedded ESG compliance frameworks into customer-facing banking operations, establishing sustainability metrics and reporting mechanisms to align with Citi Bank's corporate social responsibility goals.
- **Digital Adoption & Customer Experience:** Led the rollout of e-statements and digital documentation across retail banking, driving a 40% reduction in paper consumption while improving customer accessibility and satisfaction through seamless digital experiences.
- **Operational Efficiency:** Digitized legacy paper-based workflows, automating document processing and storage—achieving a 30% reduction in operational costs and significantly improving processing turnaround times.
- **Regulatory & ESG Compliance:** Ensured 100% alignment with emerging ESG regulatory requirements and Citi Bank's internal sustainability mandates by establishing robust governance frameworks, reporting dashboards, and audit-ready documentation.
- **Cross-Functional Leadership:** Orchestrated collaboration across Retail Banking, Operations, IT, Sustainability, Legal, and Marketing teams to align program deliverables with enterprise ESG strategy and customer experience objectives.

- **Stakeholder Governance:** Served as the primary liaison to Executive Steering Committees and ESG governance boards, translating sustainability metrics into clear business value propositions to secure continued funding and organizational buy-in.
- **Change Management & Adoption:** Led organizational change initiatives to drive digital adoption across branches and customer touchpoints, implementing training programs and communication strategies to ensure seamless transition to paperless banking.

PROGRAM IMPACT & RESULTS

- **40% Reduction in Paper Consumption:** Significantly reduced environmental footprint through e-statement adoption and digital documentation across retail banking operations.
- **30% Operational Cost Savings:** Digitized legacy paper-based workflows, automating processes and reducing manual handling expenses.
- **Enhanced Customer Perception:** Improved customer satisfaction scores through sustainable banking practices and seamless digital experiences.
- **100% ESG Compliance:** Achieved full alignment with ESG regulatory requirements and corporate sustainability mandates with zero audit findings.
- **Accelerated Processing Times:** Reduced document processing turnaround by 50% through automated digital workflows and paperless operations.
- **Strengthened Brand Reputation:** Positioned Citi Bank as a leader in sustainable banking practices, reinforcing customer trust and loyalty.

→ Client : Citi Bank, USA
 Domain : Banking
 Program Title : Next-Generation Card Management & Digital Innovation

Led the enterprise-wide replacement of Citi Bank's legacy, on-premise Card Management System with a modern, cloud-enabled platform to drive product agility, reduce operational costs, and ensure compliance with evolving regulatory standards. The initiative focused on achieving a seamless migration of 2 million active credit and debit card portfolios with zero data loss and uninterrupted customer transactions, while enabling new product features such as instant virtual card issuance, dynamic currency conversion, and customizable transaction limits via mobile app. Additionally, the program achieved PCI-DSS 4.0 compliance and delivered a 30% reduction in annual system maintenance costs, supported by comprehensive training to ensure 100% stakeholder readiness across operations, customer service, and IT teams prior to go-live.

Roles & Responsibilities: - [As Program Manager]

- **Strategic Program Execution:** Directed the end-to-end lifecycle of replacing the legacy card management platform with a cloud-enabled, modern architecture, establishing a scalable, future-ready system to accelerate product innovation and enhance customer experience.
- **Portfolio Migration Management:** Orchestrated the seamless migration of 2 million active credit and debit card portfolios to the new cloud platform, ensuring zero data loss, zero transaction disruptions, and 100% data integrity throughout the transition.
- **Product Innovation & Feature Enablement:** Enabled new digital-first capabilities including instant virtual card issuance, dynamic currency conversion, and customizable transaction limits via mobile app, significantly enhancing customer convenience and competitive positioning.
- **Regulatory Compliance:** Achieved 100% PCI-DSS 4.0 compliance by establishing robust security controls, encryption protocols, data governance frameworks, and comprehensive audit trails throughout the modernization journey.
- **Cost Optimization:** Delivered a 30% reduction in annual system maintenance costs by decommissioning legacy infrastructure and transitioning to cloud-native, scalable platform with automated updates and reduced operational overhead.
- **Cross-Functional Leadership:** Orchestrated collaboration across IT, Cloud Engineering, Card Operations, Product, Security, Compliance, and Customer Service teams to align technical deliverables with business objectives and ensure seamless program execution.
- **Vendor & Partner Management:** Managed strategic vendor relationships for cloud infrastructure, platform implementation, and professional services, negotiating contracts and ensuring delivery against SLAs and program milestones.

- **Stakeholder Governance:** Served as the primary liaison to Executive Steering Committees and Board-level sponsors, translating technical migration metrics and business outcomes into clear value propositions to secure continued funding and organizational buy-in.
- **Change Management & Training:** Led comprehensive training and change management initiatives across Operations, Customer Service, and IT teams, ensuring 100% stakeholder readiness and seamless adoption of the new platform prior to go-live.
- **Risk Management & Business Continuity:** Established robust rollback strategies, disaster recovery protocols, and rigorous UAT (User Acceptance Testing) to mitigate migration risks and ensure uninterrupted customer transactions throughout the transition.

PROGRAM IMPACT & RESULTS

- **2 Million Portfolios Migrated Seamlessly:** Successfully transitioned all active credit and debit card portfolios with zero data loss and zero transaction disruptions.
- **30% Reduction in Maintenance Costs:** Decommissioned legacy infrastructure and transitioned to cloud-native platform, significantly reducing annual operational expenses.
- **100% PCI-DSS 4.0 Compliance:** Achieved full adherence to evolving regulatory standards with zero audit findings.
- **Enhanced Product Agility:** Enabled instant virtual card issuance, dynamic currency conversion, and customizable transaction limits via mobile app.
- **100% Stakeholder Readiness:** Delivered comprehensive training across Operations, Customer Service, and IT teams ensuring seamless adoption prior to go-live.
- **Uninterrupted Customer Experience:** Maintained 24/7 transaction availability throughout the migration with zero customer-impact downtime.
- **Accelerated Time-to-Market:** Reduced new product feature release cycles by 40% through cloud-native architecture and automated deployment pipelines.

→ Client : Citi Bank, USA
 Domain : Banking
 Role : Project Manager

The goal of the project was to accelerate digital adoption and modernize the payment experience across Citi Bank's credit and debit card portfolio by enabling full support for major mobile wallets (Apple Pay, Google Pay, Samsung Pay) and card-on-file tokenization with key merchant partners such as Amazon and PayPal. The initiative focused on tokenizing 50M+ consumer and small business cards, ensuring seamless integration with Visa Token Service (VTS) and Mastercard Digital Enablement Service (MDES) while maintaining zero disruption to customer transactions. In addition, the project aimed to increase contactless transaction volume by 40%, grow active mobile wallet users by 5 million within 12 months, and achieve full compliance with PCI CP standards, network rules, and U.S. regulations (Reg E, Reg Z). By delivering these outcomes, the project sought to strengthen payment security, enhance customer convenience, and position Citi Bank as a leader in digital payments innovation.

Roles & Responsibilities: - [As Project Manager]

- Led Agile delivery of digital wallet enablement and card-on-file tokenization across Citi Bank's 50M+ credit and debit card portfolio, modernizing the payment experience and accelerating digital adoption.
- Facilitated Agile ceremonies (daily stand-ups, sprint planning, retrospectives) to ensure iterative progress across migration, integration, compliance, and feature enablement workstreams.
- Collaborated with cross-functional squads (Payments, IT Security, Compliance, Risk, Customer Experience, and Merchant Partnerships) to prioritize backlog items and deliver incremental features aligned with PCI CP standards and U.S. regulations (Reg E, Reg Z).
- Defined user stories and acceptance criteria for universal tokenization, ensuring seamless provisioning of cards into Apple Pay, Google Pay, Samsung Pay, and merchant platforms such as Amazon and PayPal.
- Oversaw sprint-based technical integration with Visa Token Service (VTS) and Mastercard Digital Enablement Service (MDES), ensuring zero disruption during migration from legacy provisioning systems.

- Partnered with vendors and internal stakeholders to validate solution design, conduct proof-of-concept trials, and optimize system performance for large-scale tokenization and wallet adoption.
- Developed training and enablement materials to prepare operations, customer service, and IT teams for supporting digital wallet transactions and dispute resolution processes.
- Applied Agile metrics (velocity, burndown charts, defect tracking) to monitor delivery progress, identify risks, and proactively mitigate issues during rollout.
- Delivered measurable outcomes, increasing contactless transaction volume by 40%, growing active mobile wallet users by 5 million within 12 months, and positioning Citi Bank as a leader in secure, compliant digital payments.

Project Manager @ TEMENOS (WWW.TEMENOS.COM)

August 2017 - October 2019

→ Client : Open Bank - Spain
Domain : Banking
Role : Project Manager

The goal of the project at Openbank Spain was to implement and streamline cheque guarantee functionality within the T24 Core Banking system, ensuring secure handling of high-value and sensitive cheque transactions. The initiative aimed to provide customers with certified cheques backed by the bank, thereby increasing trust and reliability in payments such as property down payments or large financial commitments. The project focused on enabling guarantee initiation, cancellations, stop payments, and handling of non-presented cheques during the validity period, with funds managed securely in suspense accounts. Ultimately, the objective was to enhance transaction security, improve customer confidence, and align with Openbank Spain's commitment to robust, compliant, and efficient digital banking operations.

Roles & Responsibilities: - [As Project Manager]

- Led Agile delivery of cheque guarantee functionality within the T24 Core Banking system, enabling secure initiation, cancellation, stop payments, and non-payment handling of certified cheques.
- Facilitated Agile ceremonies (daily stand-ups, sprint planning, retrospectives) to ensure iterative progress across design, development, testing, and deployment phases.
- Collaborated with cross-functional squads (Core Banking, Payments, Compliance, Risk, and Operations) to prioritize backlog items and deliver incremental enhancements aligned with Openbank Spain's regulatory and customer requirements.
- Managed sprint-based integration activities, ensuring seamless handling of suspense accounts, guarantee validity periods, and customer account reconciliation.
- Partnered with vendors and internal stakeholders to validate solution design, conduct proof-of-concept trials, and optimize system performance for high-value cheque transactions.
- Developed training and enablement materials for operations and customer service teams, ensuring adoption of new cheque guarantee processes and compliance with banking standards.
- Applied Agile metrics (velocity, burndown charts, defect tracking) to monitor progress, identify risks, and proactively mitigate issues during rollout.
- Delivered measurable outcomes, strengthening transaction security, improving customer trust in certified cheques, and aligning with Openbank Spain's commitment to robust and efficient digital banking operations.

→ Client : Open Bank - Spain
Domain : Banking
Role : Project Manager

The goal of the project was to enhance Openbank Spain's T24 Core Banking system to ensure compliance with Spanish Tax Authority regulations governing joint accounts and deposits. Specifically, the system needed to validate that all beneficial owners of a joint account or deposit share the same residential status—either all residents of Spain or all non-residents. The initiative aimed to

prevent the creation of joint accounts with mixed residency status, enforce accurate validations during account opening, and provide clear error messaging when rules were violated. By implementing these controls, the project sought to strengthen regulatory compliance, improve operational accuracy, and safeguard customer trust in Openbank Spain's account management processes.

Roles & Responsibilities: - [As Project Manager]

- Led Agile delivery of compliance enhancements in the T24 Core Banking system to enforce Spanish Tax Authority rules on joint accounts and deposits.
- Facilitated Agile ceremonies (daily stand-ups, sprint planning, retrospectives) to drive iterative progress across requirement validation, system design, development, and testing.
- Collaborated with cross-functional squads (Core Banking, Compliance, Risk, IT, and Operations) to prioritize backlog items and ensure regulatory alignment.
- Defined user stories and acceptance criteria for residency validation, ensuring the system correctly restricted joint accounts to either all residents or all non-residents.
- Managed sprint-based system integration and testing activities, validating error messages and exception handling for mixed residency scenarios.
- Partnered with stakeholders and vendors to ensure solution design adhered to compliance standards and operational workflows.
- Developed training and enablement materials for branch and operations staff to ensure smooth adoption of new account validation processes.
- Applied Agile metrics (velocity, burndown charts, defect tracking) to monitor delivery progress, identify risks, and proactively mitigate issues.
- Delivered measurable outcomes, strengthening regulatory compliance, improving operational accuracy, and safeguarding customer trust in Openbank Spain's account management processes.

→ Client : Open Bank - Spain
Domain : Banking
Role : Project Manager

The goal of the project was to implement account verification functionality within Openbank Spain's T24 Core Banking system using the BBAN (Basic Bank Account Number) standard, enabling secure and efficient validation of customer accounts across participating banks in Spain. The initiative aimed to reduce documentation overhead and streamline background verification processes by automating the handling of incoming verification requests from other banks and outgoing requests initiated by Openbank. By ensuring accurate and timely account verification, the project sought to strengthen interbank collaboration, improve operational efficiency, and enhance customer trust in Openbank Spain's digital banking services.

Roles & Responsibilities: - [As Project Manager]

- Led Agile delivery of BBAN-based account verification functionality within Openbank Spain's T24 Core Banking system, reducing documentation overhead and streamlining background checks.
- Facilitated Agile ceremonies (daily stand-ups, sprint planning, retrospectives) to ensure iterative progress across design, development, testing, and deployment phases.
- Collaborated with cross-functional squads (Core Banking, Compliance, IT Security, and Operations) to prioritize backlog items and deliver incremental enhancements aligned with Spanish interbank standards.
- Defined user stories and acceptance criteria for handling both incoming verification requests from participating banks and outgoing requests initiated by Openbank.
- Managed sprint-based integration activities, ensuring seamless API communication and accurate validation of account verification status across interbank networks.
- Partnered with vendors and internal stakeholders to validate solution design, conduct proof-of-concept trials, and optimize system performance for real-time verification.
- Developed training and enablement materials for operations and customer service teams, ensuring adoption of new verification processes and compliance with regulatory requirements.
- Applied Agile metrics (velocity, burndown charts, defect tracking) to monitor delivery progress, identify risks, and proactively mitigate issues during rollout.

- Delivered measurable outcomes, strengthening interbank collaboration, improving operational efficiency, and enhancing customer trust in Openbank Spain's account verification services.

→ Client : Bank International Luxembourg
 Domain : Banking
 Role : Project Manager

The goal of the project was to implement and strengthen Deposit Interest Retention Tax (DIRT) compliance processes within Bank International Luxembourg's core banking systems, ensuring accurate deduction and reporting of tax on customer deposit interest. The initiative aimed to automate the calculation and withholding of DIRT at the statutory rate of 41% before interest payments were credited to customers, while also enabling mandatory reporting to the Revenue authorities when annual interest exceeded predefined thresholds. By embedding these controls, the project sought to reduce manual overhead, ensure regulatory compliance, improve transparency in customer tax obligations, and safeguard the bank's adherence to income tax and reporting standards.

Roles & Responsibilities: - [As Project Manager]

- Led Agile delivery of Deposit Interest Retention Tax (DIRT) compliance enhancements within Bank International Luxembourg's core banking systems, ensuring accurate tax deduction and reporting.
- Facilitated Agile ceremonies (daily stand-ups, sprint planning, retrospectives) to drive iterative progress across requirement gathering, system design, development, and testing.
- Collaborated with cross-functional squads (Tax Compliance, Core Banking, IT, Risk, and Operations) to prioritize backlog items and deliver incremental features aligned with regulatory mandates.
- Defined user stories and acceptance criteria for automated DIRT calculation at 41%, withholding before interest payments, and mandatory reporting to Revenue when thresholds were exceeded.
- Managed sprint-based integration activities, ensuring seamless reconciliation between customer accounts, tax reporting modules, and regulatory systems.
- Partnered with vendors and internal stakeholders to validate solution design, conduct proof-of-concept trials, and optimize system performance for tax compliance.
- Developed training and enablement materials for operations and customer service teams to ensure adoption of new tax reporting processes and compliance with income tax standards.
- Applied Agile metrics (velocity, burndown charts, defect tracking) to monitor delivery progress, identify risks, and proactively mitigate issues during rollout.
- Delivered measurable outcomes, reducing manual overhead, ensuring regulatory compliance, improving transparency in customer tax obligations, and safeguarding Bank International Luxembourg's adherence to reporting standards.

→ Client : Nordea - Finland
 Domain : Banking
 Role : Project Manager

The goal of the project was to enable 24/7 loan applications, top-ups, and disbursement requests across Nordea Finland's digital channels (mobile, internet banking, and call center) while ensuring compliance with Finnish Consumer Rights legislation. The initiative focused on embedding business rules into the core banking system to enforce the legal requirement that any loan approved between 23:00 EET and 07:00 EET must be deferred until 07:00 EET the following day. By implementing these controls, the project sought to deliver a seamless customer experience, ensure regulatory compliance, and strengthen operational efficiency in loan servicing.

Roles & Responsibilities: - [As Project Manager]

- Led Agile delivery of loan application, top-up, and disbursement functionality across Nordea Finland's digital channels (mobile, internet banking, and call center), ensuring compliance with Finnish Consumer Rights legislation.

- Facilitated Agile ceremonies (daily stand-ups, sprint planning, retrospectives) to drive iterative progress across requirement gathering, system design, development, and testing.
- Collaborated with cross-functional squads (Core Banking, Compliance, Risk, IT, and Operations) to prioritize backlog items and deliver incremental features aligned with regulatory mandates.
- Defined user stories and acceptance criteria to enforce business rules requiring deferred disbursement of loans approved between 23:00 EET and 07:00 EET until 07:00 EET the following day.
- Managed sprint-based integration activities, ensuring seamless processing across loan origination, approval, and disbursement modules while maintaining compliance with consumer protection laws.
- Partnered with stakeholders and vendors to validate solution design, conduct proof-of-concept trials, and optimize system performance for 24/7 loan servicing.
- Developed training and enablement materials for customer service and operations teams to ensure smooth adoption of new loan disbursement processes.
- Applied Agile metrics (velocity, burndown charts, defect tracking) to monitor delivery progress, identify risks, and proactively mitigate issues during rollout.
- Delivered measurable outcomes, enabling 24/7 loan servicing, ensuring compliance with Finnish legislation, and enhancing customer trust in Nordea Finland's digital banking services.

Project Manager @ TECH MAHINDRA

August 2016 - August 2017

→ Client : CHEVRON, USA
Role : Project Manager

The goal of the project was to transform Chevron Lubricants' global Service Center operations by standardizing on Salesforce Service Cloud and leveraging its matured functionalities and industry best practices. This initiative supported the launch of Chevron Business Point 2.0 (CBP), an e-commerce platform designed to enhance customer engagement through new digital channels. The project aimed to modernize customer service processes, improve responsiveness, and enable seamless integration with CBP 2.0, starting with pilot rollouts at LBST and Lubetek before expanding to other Chevron businesses, including Marine and Europe. By doing so, Chevron sought to maximize its investment in Salesforce Service Cloud, strengthen customer relationships, and drive operational excellence across its global service network.

Roles & Responsibilities: - [Project Manager]

- Directed end-to-end project delivery using the Waterfall methodology, overseeing requirements gathering, design, development, testing, and global rollout of Salesforce Service Cloud enhancements.
- Defined detailed project scope, timelines, and milestones, ensuring alignment with Chevron's strategic objective of transforming Service Center operations and supporting CBP 2.0 launch.
- Coordinated with business stakeholders across LBST, Lubetek, Marine, and European divisions to capture requirements and establish standardized processes for customer engagement.
- Managed vendor and internal IT teams to configure and implement matured Salesforce Service Cloud functionalities, ensuring adherence to industry best practices.
- Oversaw pilot implementations at LBST and Lubetek, validating functionality, gathering feedback, and preparing for phased expansion to other Chevron businesses.
- Developed comprehensive documentation including functional specifications, test plans, operational manuals, and training materials to support global adoption.
- Monitored project progress against baseline schedules, budgets, and quality standards, escalating risks and implementing corrective actions where necessary.
- Ensured compliance with Chevron's governance frameworks, change management protocols, and global operational standards.

- Delivered measurable outcomes, enabling standardized customer service processes, improved responsiveness, and maximized ROI from Salesforce Service Cloud investment.

Project Manager @ IBM

Oct 2009 - July 2016 (6+ yrs)

→ Client : AT&T (USA)
 Role : Project Manager
 Domain : Telecom

The goal of the project was to modernize AT&T's core IP/MPLS backbone to significantly increase network capacity, enable software-defined networking (SDN) capabilities, and enhance overall reliability for both consumer and enterprise services. This initiative aimed to deliver a more scalable, resilient, and future-ready infrastructure by deploying next-generation routers and switches, executing seamless live traffic migrations, and integrating vendor solutions in compliance with architectural standards. The program was designed to improve customer experience through 40% latency reduction and 70% capacity increase, while achieving cost efficiency by delivering the project under budget.

Roles & Responsibilities: - [As Project Manager]

- Directed the full project lifecycle of a multi-year IP/MPLS backbone modernization program, applying Waterfall methodology from requirements gathering through design, procurement, deployment, and cutover.
- Managed cross-functional teams (Network Engineering, Planning, Operations, Security) to deliver phased upgrades of core routers and switches, ensuring compliance with AT&T's architectural and reliability standards.
- Developed detailed project schedules, milestone plans, and dependency tracking to drive execution and ensure timely delivery across all phases.
- Executed structured migration plans for live customer traffic, coordinating cutovers with zero unplanned service outages.
- Oversaw vendor contracts and deliverables, ensuring seamless technology integration and adherence to compliance and security requirements.
- Controlled a \$10M+ capital budget, delivering the program 5% under budget while achieving technical KPIs (40% latency reduction, 70% capacity increase).
- Implemented formal risk and change management processes, proactively mitigating service disruption risks and ensuring smooth transitions.
- Prepared governance reports and stakeholder communications, providing transparent updates on progress, risks, and financial performance to executive leadership.

→ Client : AT&T (USA)
 Role : Project Manager
 Domain : Telecom

The goal of the project was to transform AT&T's voice services by migrating from legacy circuit-switched (TDM) infrastructure to a cloud-native IMS platform, enabling advanced VoLTE and VoWiFi capabilities. This initiative aimed to deliver superior voice quality (HD Voice), faster call setup times, and seamless subscriber experience, while ensuring service integrity during the migration of over 2 million customers. Additionally, the project established the foundational architecture for future 5G VoNR services, positioning AT&T for next-generation voice innovation.

Roles & Responsibilities: - [As Project Manager]

- Directed the full project lifecycle of migrating voice services from legacy TDM switches to a cloud-native IMS platform, applying Waterfall methodology from requirements gathering through design, testing, deployment, and cutover.
- Coordinated cross-functional teams (Cloud Infrastructure, SBC, Telephony Application Server, Device Certification) to ensure end-to-end service integrity and compliance with AT&T's standards.
- Developed detailed project schedules, milestone plans, and dependency tracking to manage complex migration activities for 2M+ subscribers.

- Managed cutover execution and fallback strategies, minimizing risk and ensuring uninterrupted service during subscriber migration.
- Collaborated with vendors (Ericsson, Nokia) to oversee solution integration, performance testing, and optimization of VoLTE and VoWiFi services.
- Implemented structured risk and change management processes, proactively addressing potential service disruptions and ensuring smooth transitions.
- Delivered the project on schedule, enabling superior voice quality (HD Voice), faster call setup times, and laying the foundation for future 5G VoNR services.
- Prepared governance reports and stakeholder communications, providing transparent updates on progress, risks, and performance outcomes to executive leadership.

→ Client : AT&T (USA)
 Role : Team Lead
 Domain : Telecom

The goal of the project was to launch a new IoT connectivity management platform and integrate a strategic Mobile Virtual Network Operator (MVNO) partner into AT&T's network ecosystem, enabling seamless device provisioning, billing, and policy control through standardized APIs. This initiative aimed to establish scalable operational processes and SLAs to support partner onboarding, drive enterprise adoption, and generate new revenue streams. The program successfully delivered an integrated platform that activated over 500,000 connected devices and generated \$7M in annual recurring revenue, strengthening AT&T's position in the IoT and MVNO markets.

Roles & Responsibilities: - [As Team Leader]

- Directed the full project lifecycle for launching a new IoT connectivity management platform and onboarding a strategic MVNO partner, applying Waterfall methodology from requirements gathering through design, integration, testing, and deployment.
- Served as the single point of contact between external partners/vendors and internal teams (network, IT, billing, legal), ensuring seamless coordination and alignment with AT&T's standards.
- Defined and managed implementation of critical interfaces (APIs) for provisioning, billing, and network policy control, ensuring interoperability and compliance with operational requirements.
- Developed detailed project schedules, milestone tracking, and dependency management to drive execution across multiple workstreams and ensure timely delivery.
- Established and documented operational processes and SLAs, enabling effective partner support and long-term sustainability post-launch.
- Oversaw vendor deliverables and solution integration, ensuring adherence to technical specifications, performance benchmarks, and contractual obligations.
- Implemented structured risk and change management processes, proactively mitigating potential service disruptions during platform rollout and MVNO onboarding.
- Delivered measurable business outcomes, successfully enabling activation of 500,000+ connected devices and generating \$7M in new annual recurring revenue.

→ Client : AT&T (USA)
 Role : Team Lead
 Domain : Telecom

The goal of the project was to design, test, and commercially launch a new managed SD-WAN service for enterprise customers using universal Customer Premises Equipment (uCPE). This initiative aimed to expand AT&T's enterprise portfolio by delivering a scalable, flexible, and cost-efficient connectivity solution. The program focused on vendor selection and integration of Virtual Network Functions (VNFs), development of standardized deployment playbooks, and alignment with product, marketing, and sales teams to ensure a successful go-to-market strategy. The project was designed to accelerate enterprise adoption, improve service agility, and generate new revenue streams, achieving \$5M in initial contract value ahead of schedule.

Roles & Responsibilities: - [As Team Leader]

- Directed the full project lifecycle for the design, testing, and commercial launch of a new managed SD-WAN service utilizing universal Customer Premises Equipment (uCPE), applying Waterfall methodology from requirements gathering through deployment.
- Managed vendor selection and evaluation process for Virtual Network Functions (VNFs) and uCPE hardware, leading technical assessments, proof-of-concept trials, and final contract negotiations.
- Collaborated with Product Management to define service features and with Marketing/Sales teams to develop go-to-market strategies and sales enablement materials.
- Developed standardized deployment playbooks and operational runbooks, ensuring scalable rollout and consistent service delivery across enterprise customers.
- Created detailed project schedules, milestone tracking, and dependency management to drive execution across design, testing, and launch phases.
- Oversaw vendor deliverables and solution integration, ensuring adherence to technical specifications, performance benchmarks, and compliance requirements.
- Implemented structured risk and change management processes, proactively mitigating potential service disruptions during rollout.
- Delivered the service ahead of schedule, capturing \$5M in initial contract value and establishing a new enterprise revenue stream.

Software Engineer @ NUCLEUS SOFTWARE

Feb 2009 - Sep 2009

→ Client : CITI BANK, SINGAPORE
 Environment : Siebel 8.x (Tools), Oracle, Windows 2000/XP
 Role : Software Engineer

The goal of the project was to strengthen Citi Bank Singapore's production environment for Siebel 8.x applications by enhancing support processes, improving system reliability, and enabling seamless integration across front-end and back-end systems. The initiative focused on developing robust production support policies and procedures to reduce response times and increase customer satisfaction, while also managing application rollouts and release scheduling into the production environment. Additionally, the project aimed to design and implement integration architecture to support web-based product ordering, fulfillment, and tracking, thereby improving operational efficiency and customer experience. By delivering these outcomes, the project sought to ensure stability of mission-critical banking applications, streamline service delivery, and enable scalable digital operations for Citi Bank Singapore.

Roles & Responsibilities: - [As Software Engineer]

- Acted as technical lead for production environment support, ensuring stability and availability of mission-critical Siebel 8.x applications.
- Developed and implemented enhanced production support policies and procedures, reducing response times and improving customer satisfaction.
- Conducted requirements gathering sessions with clients, external vendors, and internal application users to capture business needs and translate them into technical solutions.
- Managed scheduling and delivery of application releases into the production environment, ensuring timely and error-free deployments.
- Performed application rollouts and coordinated release activities to minimize downtime and disruption.
- Designed and built integration architecture between front-end and back-end systems, enabling seamless web-based product ordering, fulfillment, and tracking.
- Collaborated with cross-functional teams to ensure smooth integration, scalability, and performance of production systems.

Software Engineer @ ACCENTURE

August 2006 to Dec 2008

→ Client : TELSTRA, AUSTRALIA
 Environment : Siebel 7.x (Tools)/eScript, Oracle, Windows 2000/XP
 Role : Siebel Developer

The goal of the project was to enhance Telstra Australia's Siebel 7.x CRM platform by configuring and customizing application components to improve usability, functionality, and customer service efficiency. The initiative focused on developing applets, views, and screens, and integrating them seamlessly into the application architecture, ensuring smooth navigation and user experience. Additionally, the project aimed to extend system capabilities through links, joins, multi-value groups (MVGs), pick applets, and pick lists, while implementing applet and business component (BC) level scripting to meet complex business requirements. Workflow processes were designed, tested, and automated through policies, scripts, and events to streamline customer service operations. By delivering these outcomes, the project sought to optimize Telstra's CRM processes, improve operational performance, and enhance customer engagement across its telecom services.

Roles & Responsibilities: - [As Software Engineer]

- Configured and developed Siebel 7.x application components, including applets, views, and screens, ensuring seamless integration within the CRM platform.
- Associated applets, views, and screens to build a cohesive application structure that improved usability and navigation for end users.
- Enhanced application functionality by implementing links, joins, multi-value groups (MVGs), pick applets, and pick lists to support complex business requirements.
- Performed applet-level and business component (BC) scripting using eScript to customize workflows and extend system capabilities.
- Designed, created, and tested workflow processes, automating customer service operations and improving efficiency.
- Invoked workflow processes through policies, scripts, and events, ensuring smooth execution of business rules and operational logic.
- Collaborated with cross-functional teams to deliver scalable CRM solutions that improved Telstra's customer engagement and service delivery.

Siebel Production Support @ HCL

Nov 2004 to Nov 2005

→ Client : SBC INTERNET SERVICES, USA
Environment : Siebel 7.x (Tools)/eScript, Oracle, Windows 2000/XP
Role : Siebel Technical Support

The goal of the project was to stabilize and enhance SBC Internet Services' Siebel 7.x CRM platform by providing technical support for order management, product configuration, and service request modules. The initiative focused on investigating and resolving user-reported issues within defined SLA timeframes, performing bug fixes, unit testing, and managing emergency releases to ensure uninterrupted customer service operations. By delivering these outcomes, the project sought to improve system reliability, reduce downtime, and enhance customer satisfaction through faster issue resolution and proactive support practices.

Roles & Responsibilities: - [Siebel Technical Support]

- Investigated and resolved production issues related to Siebel Order Management, Products, and Service Request modules, ensuring minimal disruption to business operations.
- Analyzed user-reported incidents and provided timely resolutions within defined SLA timeframes to maintain high service quality and customer satisfaction.
- Performed bug fixing, unit testing, and emergency releases to stabilize the production environment and deliver quick turnaround for critical issues.
- Monitored system performance and reliability, proactively identifying potential risks and implementing corrective measures.
- Collaborated with cross-functional teams including application users, vendors, and internal IT staff to troubleshoot and resolve complex technical problems.
- Documented support procedures and resolutions, contributing to knowledge base development and improving efficiency of future issue handling.

- Ensured compliance with production support standards, maintaining system integrity and operational continuity.

ACADEMICS: B E (Electrical & Electronics - **Regular Full Time**); AMS Engg. College, University of Madras, 2004. Master of Business Administration [MBA] from Alagappa University (Karaikudi) 2007.

CERTIFICATION'S:

1. **Project Management Professional (PMP)** - (Cert ID:3436238)
2. Scrum Alliance (USA) Certified Scrum Master (CSM) - (Cert ID: 000355314)
3. Scaled Agile Framework (SAFe 6.0 Agilist) Certified - (Cert ID: 62962245-3353)
4. PRINCE2 Foundation Certified (Cert ID:GR633024467MA)
5. PRINCE2 Practitioner Certified (Cert ID:GR634014049MA)
6. ITIL Foundation (AXELOS UK)
7. ITIL Intermediate (Service Operations) UK
8. ISO-22301 Certified Lead **Business Continuity Plan** Implementer ***New**
9. CMMI Registered Lead Appraiser for Development Projects. ***New**
