Synopsis: Level 3 certified **Anaplan Model Builder** with **5+ years overall experience** and **3 years in Anaplan modelling**, designing and developing scalable planning solutions across **Sales Planning, Financial Planning, Supply Chain, Workforce**. Strong at translating business requirements into modular model designs, reconciling data across systems, and delivering user-centric dashboards and workflows. Experience on **Data Hub, Spoke Model, CloudWorks, Workflow, Polaris, ADO , Optimizer, Data & System Integrations, UI-UX**.

EXPERIENCE SUMMARY

- 3+ years of overall experience and **3+ years of** experience in Anaplan modeling, including modules, lists, dashboards, and workflows.
- Expertise in designing and building scalable Anaplan models across **Sales & Finance** etc.
- Delivered **3 end-to-end Anaplan Model implementations** and **Supported 1 Production Models** with performance monitoring, issue resolution and cycle operations
- Excellent communication and collaboration skills, with **Level 3 Anaplan certification** and experience in Scrum teams. Worked in **AGILE methodologies** and having good understanding of **ALM**
- Led **UAT processes**, prepared release documentation, and ensured that models meet performance and compliance standards.
- Good knowledge on relational DBs, Microsoft office products, ETL tools.
- Strong focus on **continuous improvement, automation**, and leveraging **Anaplan Management Reporting and UX features** to deliver impactful business insights and decision support.
- Collaborated cross-functional communication with product owners, BAs and stakeholders to triage model issues and consolidated feedback into the enhancement backlog for roadmap planning and Anaplan model enhancements.

Core Competencies

EPM Tool & Integrations:
Anaplan Product – CloudWorks, ADO, Workflows, Data Hub, Spoke Model Data &

Certification:
Anaplan Level 1, Level 2 & The Anaplan Way & Level 3

Anaplan Modelling:
Sales Planning and FP&A

Experience & Exposure: ALM, UAT process, AGILE, DBs, ETL,

Mohit Kumar

Transenigma (Jan 2025 – Jun 2026)

Client : AstraZeneca
Role : Anaplan Model Builder (Consultant)

Model: Sales Incentive, Commission & Sales Performance Planning Model

Tools & Technologies: Anaplan (Lists, Modules, UX Dashboards), Data Hub / Spoke Architecture, Workflow, CloudWorks, SQL (basic), Jira

Model Description

Built an end-to-end sales planning solution to automate **commission and incentive calculations** and streamline **pipeline, quota allocation, and attainment tracking**. Delivered real-time visibility into payout projections, margin impact, and performance KPIs across regions, products, and sales reps, enabling Sales Leadership and Sales Ops to run faster and more controlled planning cycles.

Project Contributions

- Implemented complex payout logic supporting **tiered commissions, flat-rate incentives, accelerators, caps/floors, and product-based eligibility rules**.
- Designed scalable model architecture using **System modules for mappings** (Rep → Region, Product → Category, Territory → Hierarchy) to ensure performance and maintainability.
- Built interactive dashboards for **quota vs attainment**, pipeline tracking, and commission projections with drill-downs by region, product line, and rep.
- Enabled **what-if simulations** for territory reassignment, quota changes, and new product launch impacts using scenario drivers and controlled inputs.
- Supported reconciliation of commission outputs with HR/Finance records and improved accuracy through validation checks and exception reporting.
- Integrated CRM pipeline and master data using governed import flows and ensured data quality via staged Data Hub loads and validations.
- Supported UAT execution, defect triage, and deployment readiness documentation, ensuring smooth rollout and user adoption.

Mohit Kumar

Model: Financial Planning & Budgeting Model (FP&A)

Tools & Technologies: Anaplan (Modules, Data Hub, Workflow, UX Dashboards), Excel, SQL (basic), Jira

Model Description

Built a driver-based FP&A solution enabling **budgeting, rolling forecasts, and variance analysis** across business units. Improved transparency and cycle efficiency by centralizing planning inputs, standardizing calculation logic, and enabling multi-version comparisons for finance stakeholders.

Project Contributions

- Configured driver-based planning modules for **Revenue, Opex, and Headcount-driven costs**, aligning planning logic with finance assumptions and business rules.
- Designed versioning approach to support **Budget, Forecast, Actuals, and Scenario iterations**, enabling faster reforecasting and controlled comparisons.
- Built variance dashboards and KPI outputs for **Actual vs Budget vs Forecast** with drill-down capability by entity/cost center/account.
- Supported workflow-based submission and review cycles by aligning access, inputs, and approvals for finance users across regions.
- Automated data integration processes between Anaplan and finance source systems using Data Hub staging, improving refresh reliability and reducing manual effort.
- Supported UAT planning, test execution, and documentation (release notes, user guides), ensuring readiness for production deployment.

Mohit Kumar

TCS (Nov 2021 – Dec 2024)

Model: Anaplan Production Support & Model Maintenance (FP&A + Revenue Planning)

Role: Associate Anaplan Model Builder – Production Support

Tools & Technologies: Anaplan (Modules, Lists, UX Dashboards, Actions/Processes, ALM), Data Hub, Workflow, Jira, Excel

Duration : Jun 2023 to Aug 2024

Model Description

Supported business-critical Anaplan models used for **FP&A budgeting/forecasting, revenue planning, cost tracking, and operational performance reporting**. Responsible for day-to-day monitoring, issue resolution, data load support, and minor enhancements to ensure stable operations and accurate planning outputs for Finance and Business teams.

Project Contributions

- Supported daily production activities by monitoring model health, resolving user queries, and ensuring planning inputs and reports were available as per business timelines.
- Assisted in troubleshooting calculation issues, mapping mismatches, and access-related problems by reviewing module logic, system mappings, and import logs.
- Supported periodic data refreshes for Actuals and master data (accounts, cost centers, business units, regions) through controlled import actions and processes.
- Helped maintain Data Hub staging modules for structured loads and supported hub-to-spoke style data movement for reporting and planning consumption.
- Supported month-end / forecast cycles by running standard processes such as Actuals load validation, version updates, and basic reconciliation checks against source extracts.
- Delivered minor enhancements including adding new line items, updating dashboards, improving filters, creating saved views, and supporting usability improvements for end users.
- Participated in UAT support by executing test cases, validating outputs, and tracking defects/enhancement requests through Jira.
- Maintained support documentation such as runbooks/SOPs, recurring cycle steps, and known issue fixes to improve support consistency.

Mohit Kumar

Project Name : DataCore Validation (Banking Domain)

Role : Manual Test Engineer

Tools & Technologies : Manual Testing, Functional Testing, Regression Testing, Usability Testing, Web Testing

Duration : Nov 2021 to May 2023

Project Description

The project focused on validating web and mobile applications to ensure functionality, usability, data accuracy, and overall system stability as per business and technical requirements. It involved end-to-end manual testing across multiple modules, including requirement analysis, test case preparation, test execution, defect reporting, regression testing, and backend data validation using SQL.

The objective was to deliver high-quality releases by identifying critical defects early, improving test coverage, and ensuring a smooth user experience across web, Android, and iOS platforms.

Project Contribution

- Analyzed business requirements, system specifications, and technical design documents to understand application functionality and define effective test scenarios.
- Prepared and executed detailed manual test cases covering functional testing, usability testing, regression testing, smoke testing, and sanity testing.
- Performed end-to-end testing on web and mobile applications, including Android and iOS platforms, to validate features against business requirements.
- Identified, documented, and tracked defects using JIRA and Azure DevOps, ensuring timely communication with development and product teams.
- Executed SQL queries for backend validation to verify database accuracy, data integrity, and consistency across application modules.
- Participated in Agile ceremonies such as daily stand-ups, sprint planning, sprint reviews, and retrospectives to support smooth delivery cycles.
- Collaborated with developers, business analysts, product owners, and QA team members to clarify requirements, resolve defects, and improve product quality.
- Supported regression testing during release cycles to ensure existing functionality was not impacted by new changes.
- Contributed to improving test coverage and defect detection by preparing reusable test scenarios and maintaining proper test documentation.
- Assisted in UAT support by validating user-reported issues and ensuring fixes were properly tested before production release.
