

Career Summary

Senior Business Analyst with extensive experience delivering **digital lending and mortgage platform transformations** across **retail banking ecosystems**. Proven expertise analyzing and improving **end-to-end lending journeys** including **application capture, credit assessment, underwriting, decisioning, loan origination, and servicing**. Specialized in **Salesforce-enabled lending ecosystems, Loan Origination Systems (LOS), and API-driven fintech integrations** supporting broker, direct, and partner channels. **Experienced working closely with credit policy teams, brokers, operations, product owners, and technology partners to design scalable, compliant, and customer-centric lending platforms**. Strong capabilities in **process modelling (BPMN), workflow automation, decisioning logic, requirements engineering, and UAT strategy**, ensuring lending platforms deliver operational efficiency, improved broker experience, and regulatory compliance.

Skills Summary

- DOMAIN and FUNCTIONAL EXPERTISE** - End-to-end **loan origination lifecycle: lead sourcing**, application capture, **credit assessment, underwriting, decisioning, loan booking, and servicing**; Loan Origination Systems (LOS) **workflow design and rule-based credit decisioning**; Credit policy translation into platform logic, **eligibility rules, and automated decisioning**; Broker / **DSA / fintech lead ingestion** and application orchestration; Digital lending journeys including **KYC, bureau checks, document verification, eSign, disbursement**; Customer **journey optimization** across **digital lending channels**
- REQUIREMENTS and BUSINESS ANALYSIS** - Business Requirements Document (BRD), Functional Specification Document (FSD), **User Stories**, Acceptance Criteria, **Data Dictionary, Process Flows (AS-IS / TO-BE), Gap Analysis, Impact Analysis, Stakeholder Workshops, Backlog Refinement, Definition of Done (DoD), UAT Strategy, Test Scenarios, Defect Triage, Traceability (RTM)**
- TECHNICAL and DATA ACUMEN** - **API Integrations (REST), JSON, XML, SQL, Data Mapping & Transformation, Core Banking Integrations, Credit Bureau Integrations, KYC & Verification Systems, Swagger / Postman API Validation, Data Validation & Reconciliation, Error Handling & Integration Behavior, Event-Driven Integrations**
- TOOLS and PLATFORMS** - Power BI, Jira, Confluence, **MS Excel (Pivot Tables, Lookups), Visio, BPMN, Figma, Draw.io, Postman, Swagger, SQL**
- GOVERNANCE and DELIVERY** - Agile / Scrum Delivery, UAT Planning & Execution, Release Readiness, Change Management, Risk & Dependency Management, Stakeholder & Vendor Coordination, Compliance Alignment, Audit Readiness, Production Go-Live & Post-Deployment Stabilization

Professional Summary

Digital Business Analyst (Lending) | Skillmine Technology Consulting | HDFC Bank Apr 2024 – Dec 2025

- Led **end-to-end business analysis for digital lending platform initiatives**, covering loan application capture, credit assessment, underwriting workflows, decisioning, and loan origination.
- Facilitated structured workshops with credit, operations, product, fintech partners, and technology teams** to identify pain points in lending journeys and design improved platform workflows.
- Analyzed **AS-IS loan origination processes** and designed **TO-BE lending workflows** to improve decisioning speed, reduce manual intervention, and enhance customer experience.
- Translated **credit policy and underwriting rules** into system behavior, eligibility logic, and workflow decision nodes within LOS/LMS platforms.
- Defined **functional requirements, process maps, user stories, and acceptance criteria** for lending platform enhancements across multiple asset products.
- Designed API-driven workflows enabling **lead ingestion, KYC verification, bureau checks, credit scoring, loan approval, and disbursement orchestration**.
- Identified opportunities to **automate manual credit assessment tasks and streamline data capture**, improving operational efficiency across partner-led lending journeys.
- Collaborated with engineering and architecture teams to implement **event-driven lending workflows and real-time credit decisioning integrations**.
- Owned **UAT planning and execution**, validating platform behavior against real-world lending scenarios and ensuring alignment with credit policy and operational processes.
- Tested functional requirements and decisioning logic** to confirm system outcomes matched expected **lending policy and underwriting scenarios**.
- Supported release cycles including **defect triage, resolution prioritization, and post-implementation validation** of lending platform improvements
- Led **end-to-end Business Analysis for LOS & LMS modernization** under a **BaaS operating model** for asset products including **Credit Cards, Personal Loans, Gold Loans, and Auto Loans**, enabling **API-first native digital journeys** across channels.
- Owned **functional and API requirements** for integration with **Lending Service Providers (LSPs) and Technology Service Providers (TSPs)**, covering **lead sourcing, credit decisioning, KYC, eSign, disbursement, and repayment orchestration**.
- Acted as the **BA owner for asset onboarding journeys**, translating product and regulatory needs into **API contracts (request/response, error handling, SLAs)** for seamless integration between **core lending systems, partner platforms, and fintech ecosystems**.
- Collaborated with architecture and engineering teams to define **event-driven and synchronous APIs** enabling **real-time credit decisioning, limit management, loan booking, and post-disbursement servicing** across asset classes.
- Drove **native digital journeys (bank-owned UX)** to reduce dependency on partner UI, improving **regulatory control, auditability, and customer experience consistency** across lending products.
- Supported **UAT and regulator-aligned validations**, ensuring LOS/LMS releases met **RBI audit expectations**, partner certification requirements, and internal risk/compliance sign-offs.
- Enabled **scalable BaaS lending capabilities** by standardizing **partner onboarding, API versioning, and reusable asset journey components**, accelerating launch timelines for new lending products and partners.
- Drove stakeholder reviews and obtained formal sign-offs** across business and technology teams.
- Planned and tracked development sprints and release schedules**.
- Acted as a single point of coordination between business, product, technology, operations, and external vendors**.
- Facilitated requirement discussions, solution design reviews, and implementation workshops**.

- Translated business requirements into detailed functional and technical specifications.
- Logged and tracked requirements with internal technology teams and third-party vendors.**
- Governed all delivery stages** including **business discussions, solution design, development, UAT**, mock runs, and **production releases**.
- Drove UAT planning, defect triage, and sign-off coordination.**
- Monitored delivery timelines and intervened proactively to address slippages.**
- Identified risks, interdependencies, and constraints**; proactively driving mitigation plans.
- Led **third-party risk management** for all DSA partnerships, covering vendor due diligence, financial and IT risk assessments, contractual safeguards, audit rights, and ongoing partner reviews.
- Defined and maintained **end-to-end process documentation** for partner onboarding, loan origination, disbursal, servicing, and exception handling, ensuring traceability and control checkpoints.
- Implemented **continuous monitoring and MIS reporting** covering volumes, conversion metrics, SLA adherence, operational exceptions, and risk indicators, enabling proactive management actions.
- Delivered **scalable, repeatable BaaS asset integration models**, enabling faster onboarding of new Online DSAs while maintaining regulatory and audit integrity.
- Led **end-to-end requirements gathering** for data, reporting, and workflow solutions, working directly with business and operations teams to understand data dependencies, pain points, and reporting gaps.
- Translated operational and regulatory needs into **clear functional and technical specifications**, enabling development teams to deliver consistent, well-governed solutions.
- Worked closely with technology teams to **validate solution designs**, ensuring alignment with business objectives, platform standards, and data governance expectations.
- Coordinated sprint planning, backlog prioritization, and delivery sequencing across parallel initiatives, improving **delivery predictability and release readiness**.
- Drove **data quality checks and traceability reviews**, reducing reporting defects and downstream rework during UAT and post-release cycles.
- Provided regular progress updates, risk visibility, and decision support to senior stakeholders, enabling timely course correction and prioritization.
- Drove **API-first digital platform development, enabling rapid partner onboarding and scalable integrations across fintech ecosystems.**
- Owned and prioritized the product backlog and roadmap for digital lending and BaaS platforms**, ensuring alignment with customer needs and business value.
- Led UAT coordination and defect triage** across internal and FinTech teams, **achieving 30% reduction in high-severity production defects** within early release cycles.
- Supported **enterprise data and reporting initiatives** by partnering with global stakeholders to define reporting requirements, operational metrics, and workflow enhancements.
- Facilitated structured workshops to capture business processes, data flows**, and control points, translating them into actionable requirements for delivery teams.

Lead Business Analyst | Aligne AI | HSBC

Sep 2023 – Apr 2024

- Owned **backlog prioritization and delivery outcomes** for Digital First-enabled enterprise platforms supporting fintech and banking use cases.
- Translated regulatory and control requirements into **execution-ready epics and user stories**, ensuring traceability from policy intent to platform delivery.
- Coordinated delivery across **security, risk, compliance, and engineering teams**, balancing speed of execution with regulatory assurance.
- Managed **multi-vendor delivery dependencies**, ensuring alignment across internal bank platforms and third-party systems.
- Ensured solutions aligned with **enterprise security and architectural standards**, supporting safe and compliant platform releases.
- Supported go-live readiness**, including operational controls, audit readiness, and pre-release risk assessments.
- Served as the **front door to engineering teams, ensuring business and operational needs were translated into outcome-focused user stories.**
- Balanced rapid feature experimentation with platform reliability and operational readiness**, critical for enterprise adoption.
- Partnered with risk, compliance, and legal teams to translate regulatory conditions into delivery checkpoints and acceptance criteria, ensuring releases met internal and external regulatory expectations.
- Collaborated with stakeholders and BI developers to **validate wireframes during UAT**, reducing rework and accelerating dashboard adoption by **30%+**

Product Owner / Business Analyst Manager | IRIS Software | Citibank

Aug 2021 – Aug 2023

- Acted as **Lead Business Analyst** for defined **MCA platform capabilities, owning backlog, delivery sequencing, and phased roadmap execution** across multiple global releases.
- Translated **the risk & controls operating model into epics, features, user stories, and acceptance criteria, ensuring traceability** from regulatory obligations to system behavior.
- Owned prioritization and dependency management** across risk, compliance, technology, data, and external vendor teams supporting the platform.
- Balanced **speed of delivery with regulatory, security, and audit constraints**, ensuring no compromise to control integrity during releases.
- Provided **regular delivery status, risk, and dependency reporting to senior stakeholders**, including CRO-aligned leadership.
- Owned requirements and functional design for API-driven integrations (read/write)** enabling risk, control, attestation, and reporting **data flows across enterprise platforms.**
- Defined and enforced non-functional requirements** including **security, resilience, performance, data integrity, and auditability**, aligned to Citi enterprise standards.
- Partnered** with Enterprise Architecture, Security, Risk, Compliance and Controls teams to **ensure platform changes adhered to firm-wide architectural and compliance standards.**
- Supported platform modernization initiatives**, including microservices-based redesign, improving scalability, deployment efficiency, and resilience—critical for regulated platforms.

- **Collaborated with UX and Information Architecture teams** to design intuitive user journeys for complex assessment and control workflows, improving adoption and operational efficiency.
- **Owned go-live readiness activities**, including **control validation**, **cutover planning support**, **data quality checks**, and **risk sign-offs** ahead of controlled production releases.
- **Ensured end-to-end traceability from requirements → controls → test cases → UAT → production sign-off.**
- Supported annual, semi-annual, and quarterly MCA attestations, ensuring platform outputs met regulatory and audit expectations.
- **Partnered with 1st Line of Defense, Risk & Compliance (2LoD)**, and ICRM under the **Three Lines of Defense model** to **ensure compliant delivery.**
- **Prepared delivery artefacts and evidence for audit and regulatory reviews, maintaining high confidence with internal and external reviewers.**
- **Acted as a single coordination point** across business, risk, compliance, technology, QA, and vendor teams **for assigned platform capabilities.**
- **Facilitated global design, discovery, and prioritization workshops**, aligning diverse stakeholders across Lines of Business and regions.
- **Drove accountability** with control owners and delivery teams **to resolve dependencies, scope conflicts, and delivery risks.**
- Supported QA teams through test strategy alignment, Test Case Reviews, Defect triage, and Formal Release sign-off.
- **Owned UAT strategy and release readiness, coordinating defect triage and prioritization, resulting in ~30% reduction in high-severity production defects.**
- **Tracked delivery KPIs and quality metrics, using insights to inform roadmap adjustments and backlog re-prioritization.**
- **Managed cross-team dependencies and delivery risks, escalating proactively to ensure timely releases in complex, multi-stakeholder environments.**
- **Owned go-live readiness activities** including approvals across **Product, Digital Banking, Operations, Risk & Compliance**, control validation, defect closure, stakeholder approvals, and production readiness checks for regulated banking platforms.

Lead Business Analyst – CRM & Lending | Persistent Systems | IDFC First Bank

Feb 2020 – Aug 2021

- Led **end-to-end Business Analysis for Personal Loans, Overdraft, and Current Account products**, covering **customer onboarding, credit assessment, account opening, disbursement, and lifecycle servicing.**
- Defined **functional and system requirements** across **LOS, LMS, and Core Banking Systems**, ensuring seamless integration between **digital channels, credit engines, and servicing platforms.**
- Partnered with product, risk, and operations teams to design **rule-driven credit policies**, eligibility checks, and **real-time decisioning workflows** for PL and OD products.
- Supported **API-led integrations** with internal systems and external partners for **KYC, bureau checks, e-mandates, eSign, disbursements, and repayments.**
- Delivered **Current Account digital journeys**, including **CKYC, document verification, account funding, transaction limits, and post-onboarding servicing.**
- Authored **BRDs, FRDs, user stories, process flows, and data mappings**, ensuring traceability from **business requirements to technical implementation.**
- Worked closely with compliance teams to ensure adherence to **RBI guidelines**, internal policies, and audit requirements across asset and CASA products.
- Supported **UAT and production validation**, coordinating defect triage, regression testing, and release sign-offs across lending and account platforms.
- Drove **journey optimization initiatives** to reduce **TAT, manual interventions, and drop-offs**, improving customer experience and operational efficiency.
- Acted as a bridge between **business, technology, and vendor teams**, enabling faster rollout of enhancements and regulatory changes.
- Led requirements and implementation support for a **digital account onboarding platform**, reducing customer onboarding time by **35%** and improving account opening completion rates by **20%.**

Business Analyst – Retail Banking | Capgemini, Sapient Consulting

Jul 2015 – Apr 2019

- Delivered business analysis for a **loan origination system (LOS) transformation**, streamlining credit approval workflows and reducing loan processing turnaround time by **30%.**
- Identified and implemented **process automation opportunities** across retail banking operations, reducing manual processing effort by **25%** and improving operational efficiency.
- Partnered with compliance teams to integrate **KYC and AML regulatory requirements** into digital onboarding flows, ensuring **100% regulatory compliance** during system upgrades.
- Facilitated stakeholder workshops across **product, technology, operations, and risk teams**, aligning requirements for a multi-million dollar retail banking transformation program.
- Designed **future-state process models and gap analyses** that enabled successful migration to a **new core banking platform**, impacting over **1M+ retail banking customers.**
- Developed **data-driven reporting dashboards** for product performance tracking, enabling leadership to identify cross-sell opportunities and increase product adoption by **15%.**
- Played a key role in **Agile delivery**, refining and prioritizing **200+ user stories** and supporting sprint planning to accelerate feature delivery for mobile banking enhancements.
- Coordinated **UAT execution across multiple business units**, ensuring successful validation of banking system releases with **zero critical post-production defects.**
- Implemented improvements to **credit card application workflows**, reducing application drop-off rates by **18%** and improving approval conversion.
- Conducted **root cause analysis on transaction failures**, leading to system fixes that reduced payment processing errors by **22%.**
- Supported launch of **new digital banking features** that increased active mobile banking users by **25% within the first year.**

Technology Analyst (Java,Middleware) | Infosys,Hitachi Consulting,Fundtech

Sep 2008 – Apr 2015

- Contributed to the **development and production support of a Global Payment Platform (GPP)** for a leading **European bank**, processing **30 + million transactions annually**, with high availability and SLA-driven performance.
- Worked closely with **Java-based backend services and middleware layers**, supporting **API-driven payment processing, message orchestration, and system-to-system integrations**.
- Monitored **project health across time, scope, and budget**, proactively identifying delivery risks and coordinating mitigation plans with technical and business stakeholders.
- Led the setup of a **Knowledge Management Centre**, institutionalising **payments domain knowledge, integration patterns, incident playbooks, and troubleshooting guides** to improve support efficiency.
- Partnered with business and operations teams to **analyse change requests and resolve day-to-day production issues**, translating functional needs into **technical impact assessments and solution options**.
- Drove **continuous improvement initiatives**, recommending **performance optimizations, defect reductions, and cost-saving opportunities** across middleware and integration layers.
- Played a key role in **Root Cause Analysis (RCA)** for **high-severity production incidents**, identifying failure points across **APIs, message queues, and downstream systems**, and ensuring permanent fixes.
- Completed an **onsite assignment in the UK** to design and deliver a **new middleware interface**, significantly reducing recurring business incidents and improving system resilience.
- Supported **Business-As-Usual (BAU) analysis, implementation, and testing**, managing **prioritization of defects, enhancements, and operational tasks** alongside project deliverables.
- Actively participated in **User Acceptance Testing (UAT)** for defect fixes and enhancements, validating **end-to-end API flows, data integrity, and regression stability** before production release.
- Worked on an **automotive configurator platform** for a **large Japanese automobile manufacturer**, supporting **API integrations, pricing logic, and configuration workflows** for US customers.
- Chaired **technical and business review meetings**, coordinating with **client Project Managers** to track progress, resolve blockers, and align delivery milestones.

Education		
Course	Institute	Year
MBA, PGPM	SPJIMR, Mumbai	2018 - 2019
Advanced Program in Information Management	McCombs School of Business, University of Texas, Austin, US	2018 - 2019
B. Tech. (Electronics and Communications)	Maharaja Agrasen Institute of Technology, Delhi	2004 - 2008

Certifications		
CSPO	Scrum Alliance	2021
CSM	Scrum Alliance	2020
ITIL V4	Axelos	2020
