

A multi-faceted professional accustomed with proven skills; targeting Senior/Mid-level opportunities as **Project /Product Management, Product Manager with** an organization

Profile Summary

Seasoned Senior Project/Product Manager with over 20 + years of experience, including a successful track record of delivering regulatory programs. Expert in large-scale **Payments Transformation (ISO 20022/SWIFT)** and Digital Transformation initiatives. Proven ability to lead cross-functional, global teams across 40+ applications with budgets up to \$60M. Certified in PMP, CSM, and SAFe, with a deep focus on design thinking and customer-centric product delivery.

With a profound specialization in Agile Product and Project Management and IT Project, Program Management, & Product Management my journey has been marked by leading transformative initiatives, notably the modernization of electronic funds payments systems using ISO 20022 standards. My role involves steering projects that harmonize global payment infrastructures, a critical evolution for the financial landscape.

The skill to manage multiple teams and ensure cost-effective delivery of complex software systems was honed during my tenure at Citi/Altimetrik, there, our collective effort resulted in the successful migration of SWIFT messages to ISO 20022, aligning with the global adoption timeline set for 2025. This experience underscores my commitment to excellence and the strategic vision in managing large-scale, high-impact programs within the banking sector and Retail.

Delivered Software product/Project from small to large scale from ideation to inception.

Delivered of strategic direction for a specific product or portfolio, including the implementation of methodologies, processes, goals and objectives Relationship management of specific product or portfolio stakeholders, including identifying relevant stakeholders and external third-party services.

Ability to work with multiple stakeholders / senior management / cross-functional teams to influence them for quicker decisions, manage sudden technical roadblocks and be able to clear them.

Provided regular status updates to the steering committee, stakeholders and executive leaderships.

Expertise in managing risk of a project and developing the mitigation plan. Ensuring the dependencies are tracked and managed eg RAID (Risk assumptions issues and dependency).

Product Management: Retail industry: - DC, SCM, Warehouse management, shipping and receiving, E-commerce.

Banking and Payment: Swift, payment, Credit and debit transfer for Bank to Bank and credit card payments (High level) , Payments and settlement. ISO20022.

Notable Accomplishments Across the Career

Effectively Delivered a large Complex Transformation Product/Program in CITI on payment systems using Agile - Converting SWIFT MT to ISO 20022 format for South Africa Domestic/CBPR payments (40 + Applications/Teams).

Delivered multiple inter related projects in a large regulatory program at HSBC – Ring fence Bank, separating HSBC UK from HSBC Bank – Non-Ring fence bank.

Led & implemented a multichannel inventory Product/Project, managing the inventory across DC, Stores, and Dot com (E-Commerce) at Target

Education

Bachelor of Engineering from Osmania University Campus, Hyderabad with 75%

PG Diploma (Computer Application) from Hyderabad India with 77%

Core Competencies

Product /Project Management/ Business analyst
Payment Domain – Payment and various settlements
Payment's regulations and governing bodies
Risk and AML
Requirement gathering, Data analysis
System integration
Product delivery, Ideation to launch
Stakeholder management & Cross-Functional collaboration
Strategic Planning, Roadmap, solution prototype, Epic and story mapping
Product/Program Scope, budget, time, Resource
Design Thinking methodology
Customer centricity
Cloud technology – AWS
Managing vendors and 3 rd party tools

Certification

PMP: Project Management Professional Certification – Aug 2011– PMI Institute
ITIL: ITIL foundation certificate in IT service management – EXIN
CSM: Citified Scrum Master – Scrum alliance
AWS: AWS Certified Cloud Practitioner
SAFe: SAFe Certified
SAFe : POPM Certified

Leadership Soft Skills :

Negotiation & Conflict Management
Visionary and Decision Making
Good Listener & Communicator
Team Building & Interpersonal Skills
Leadership and Delegation
Analytical & Creative Problem Solving
High Business Ethics & Trustworthy

Membership

- **PMP:** Project Management Professional – Member since- Aug 2011
 - **Toastmaster International** – Completed Competent Communicator (CC)- Member 2008
-

Technical Skills

Languages: Java, J2EE, Web Services, API, REST API, Cloud – AWS, PL/SQL, RPG, ILERPG, CI/CD	Database: Oracle 10g, SQL , DB2/400, Mongo DB	Tools: ServiceNow, HP ALM, QC,JIRA, Planview, Clarity PPM, VISIO, MS Project, Remedy,	Methods: Agile Methodology, Waterfall
--	--	--	--

Key Result Areas:

- Requirement gathering, in the form of Epic and meeting different stake holders and creating a roadmap for the E2E (End to end) release of a product.
 - Conduct interviews, Brainstorming workshop, surveys and document analysis to create compressive business requirement
 - Bridging the gap between business and IT, by liaising with the users for the high-level requirements and converting them in Epics.
 - Discussing with Architects and technical team and elaborating the Epics to features and detailed user stories
 - Defining user stories with clear acceptance criteria.
 - Experienced in analyzing the current business model for performing Gap analysis and generating “As-Is” to “To- Be” process flows
 - Define and maintain the product roadmap aligned with business goals.
 - Develop, PI planning, timelines, track and manage project delivery (Act as a scrum master)
 - Expertise in Design Thinking methodology and practical experience applying it to product development.
 - Strong understanding of consumer product development and Requirement gathering techniques.
 - Seasoned professional with skills in creating Quality Management and Quality Assurance (QA), Test Strategies, Test Plan, Test results for SIT, UAT, Performance testing, regression testing, Identify test design gaps and RTM (Requirement traceability matrix) , functional and Non-Functional Testing
 - Delivered the end-to-end delivery of engineering from requirement gathering to market launch.
 - Understanding of UK /US Payments systems and formats like – SEPA, SWIFT, MT/MX, ISO20022, CHAPS, TARGET, FEDWIRE, CHIPS , ACH, BACS etc
 - Knowledge of Cards payments flow E2E, ISO 8583 flows, payment process and network, settlement process
Swift Payments flow – MT103/104/202/900, Pacs 008/009 , CAMT 054 etc for domestic and cross-border flow
 - FEDWIRE, CHIPS , ACH, BACS etc
 - Knowledge of Cards payments flow E2E, ISO 8583 flows, payment process and network, settlement process
 - Swift Payments flow – MT103/104/202/900, Pacs 008/009 , CAMT 054 etc for domestic and cross-border flow
-

Work Experience

Fiserv (Client)– Pune IND

Via: Mphasis

Jan 2026 to Till date

Role: Sr Product/Program Manager

Multiple projects

- 1) Cards activation
- 2) Fraud Dialer
- 3) Rules UI – Cyber and Control
- 4) SAMSITF – Cyber and Control
- 5) Other applications

Spearheading a comprehensive technical overhaul of 40+ legacy fintech applications to address end-of-support risks and meet modern industry standards for security, scalability, and reliability. Transitioning monolithic, high-latency systems into a high-performance, cloud-ready architecture.

Key Contributions & Achievements

- **AI-Driven Engineering:** Pioneered the integration of AI-assisted coding and re-engineering tools, resulting in a **50% reduction in total project budget by optimizing development workflows.**
- **Application Re-platforming:** Leading the end-to-end lifecycle of re-engineering legacy applications, moving from out-of-support frameworks to modern, scalable tech stacks.
- **Automated Quality Assurance:** Shifted testing left by **implementing AI-powered automated testing suites**, significantly increasing code coverage and reducing manual regression efforts.
- **Scalability & Security:** Re-architected core systems to ensure compliance with global financial security standards while improving system elasticity to handle peak transaction volumes.
- **Strategic Roadmapping:** Currently defining the schedule and delivery milestones for the remaining transformation phases, balancing rapid AI-led development with rigorous fintech integration standards.

Technical Keywords for ATS Optimization

- Methodologies: Re-platforming, Re-engineering, Digital Transformation, Cloud-Native Transition.
- Tools: AI-Assisted Development (LLMs for Code), Automated Testing, CI/CD Pipelines.
- Focus Areas: Legacy System Modernization, Fintech Compliance, Scalability, Cost Optimization.

BMC (client)

Via: Collabra

Sept 2025 to Dec 2025

Role: Sr Product/Project Manager

Multiple projects

- 6) Zuora enhancements
Quote to cash release train, enhancements for CPQ, CLM, Quoting, Commissions, Contracting, Invoice to Revenue and Reporting
- 7) Replace Eloqua with Salesforce Marketing Cloud
Reconnect/configure integrations to Salesforce Marketing Cloud (leverage out of the box connectors wherever possible)
- 8) XWIKI enhancements

- Delivered Multiple Product/Projects – 1-5 Project from medium to large.
- Requirement gathering, in the form of Epic for a Large program, and meeting different stake holders and creating a roadmap for the E2E (End to end) release of a product for Appframework(big project) .
- Bridging the gap between business and IT, by liaising with business for the high-level requirements and converting them in Epics.
- Collaborating with Architects and technical team for the E2E solution, technical Architect solution and elaborating the Epics to features and detailed user stories.
- Creating user stories, Epics, Fewatures with clear acceptance criteria.
- Develop, Product roadmap, PI planning, timelines, track and manage project delivery (Act as a scrum master)

Tech Stack: Java, Microservices, Web Services, REST API, Cloud – AWS, PL/SQL , CI/CD, Jira,

MasterCard – Pune IND (Client)

Via: Inrhythm

Jan 2025 to June 2025

Role: Sr Technical Project/Product

Manager

MasterCard: Multiple projects:

- Customer access program (Mastercard) is dedicated to ensuring the safety, simplicity and security of Mastercard customer access. It has multiple product/Program under it like Web access gateway (Heracles), Secure access service, Security identity management, Application framework
- Secure access services – This product plays a pivotal role in managing security policies, authentication, authorization and token generation. It is a light weight, easily scalable microservices and API. These services align master card cloud enablement as well in soil requirement
- Appframework -Hardened ingress security, validate of all ingress channels and authenticate method (JWT, SAML etc)
- Customer access program is a critical program as all the payments calls in the Mastercard which has to be authorized and authenticated by customer access program.

Responsibilities:

- Delivered Multiple Product/Projects – 1-3 Project from medium to large.
- Requirement gathering, in the form of Epic for a Large program, and meeting different stake holders and creating a roadmap for the E2E (End to end) release of a product for Appframework(big project) .
- Bridging the gap between business and IT, by liaising with business for the high-level requirements and converting them in Epics.
- Discussing with Architects and technical team and elaborating the Epics to features and detailed user stories.
- Creating user stories with clear acceptance criteria.
- Develop, Product roadmap, PI planning, timelines, track and manage project delivery (Act as a scrum master)
- Creating wiki page for the project design, requirement and status reporting
- Run and manage agile process – grooming, planning, prioritization and retrospectives of sprints
- Formalize and streamline process across customer access teams
- Conducting product Demo and getting it approved by the stakeholders
- Proactively identify and mitigate project risks and resolve issues.
- Facilitate identification of timelines, dashboards, success metrics, and financial scorecards for each initiative
- Partner closely with other members of functional project teams to define business requirements and collaborate to deliver.
- Act as a Lead scrum teams in the delivery of high-quality software solutions that meet business needs.
- Work with Agile teams to Define test plans and ensure that products are defect free before User Acceptance Testing.
- Facilitate the User Acceptance Testing process, developing rollout plans and procedures.

Tech Stack: Java, Microservices, Web Services, REST API, Cloud – AWS, Oracle , CI/CD, Jira,

Product /Project Manager – BMC – Pune IND

Via: Collabra Digital

Oct 2023 to Dec 2024 date

Role: Sr Project Manager

Multiple projects:

1) Windows hello, 2) Cyber vault clean room, ISMT Migration SAAS based platform, Active directory recovery project, ITSM rewrite project. 3) Dev ops – Application, Application OS upgrade, DB OS upgrade and DB version upgrade for 70 applications.

Responsibilities: Project Manager and Worked as a Product owner /Business analyst for one of the projects

Project Manager for Windows /Cyber vault

- Delivered Product and Project by Managing triple constraints scope, schedule and cost using Planview tools.
- Develop, Project plan, timelines, track and manage project milestones.

Product owner for ITSM rewrite and Application upgrade project:

- I joined at the time of SIT for this project and SIT had lot of defects
- The detailed requirements were missing hence we got lot of defects in SIT for ITSM project.
- Worked with the users to gather detailed requirements by conducting workshops and understanding various flows and the conditions for each flow
- Did the Gap analysis and found the RCA (root cause of the problem) for why the defect have come, prepared a detailed functions spec and changed the plan to rework.
- Prepared a testing scenario with the help of the business for each if else test cases.
- Rebased lines the project plan, detailed module wise plan and tacking one module at a time
- Was able to achieve success and got appreciation from the Vice president for my work.

Citi : There are basically 3 types of payments that Citi supports.

- Classic Payments
- Instant Payments
- Voyager (Cross border payments)

Citi Payments support 90 countries with more than 250 clearing memberships (e.g. ACH, RTGS, check clearing). Because of on-soil requirements and other legacy systems (20/30 years old), this has resulted in pretty diverse infrastructure requirements.

Citi Direct is payment facilitation system of Citibank which supports all payment systems like book transfer, domestic fund transfer, cross-border transfer etc. There are multiple levels of authorization & approvals involved in payment flow system. Project consists of re-writing the Citi Direct application based on Microservices. Transform the TTS technology platform to have Always-On HA capability with independently manageable and high performing micro-services. It had multiple projects, I was a part of 3 teams

- Black eye: Transforming non- transactional data into Mongo DB from Oracle
- Pioneers: Replacing the DAL (Data base access layer) from oracle to Mongo DB
- Tigers: Creating different API for the teams

Role/Responsibility: Senior Product Manager /Business Analyst - Agile Practice

- Support the Architects and technical team and elaborating the Epics to features and detailed user stories
- Defining user stories with clear acceptance criteria.
- Writing the Epic/Stories for black eye and Pioneers, acceptance criteria for each Epic/story
- Pre PI planning, PI Planning event, and Post PI monitoring, facilitated scrum of scrum, Agile release train sync, System Demo and inspect and adopt.
- Establish Governance and Defect management and triaging the issues using QC
- Working with QA team and creating the test scenario and test strategy
- Preparing the test strategy and test plan for each phase of the project
- Using tools like Jira, Confluence, share point and PTS (Project Tracking system) developing the dashboards and burndown charts
- Expert in –Using of Tools like Jira, Confluence, SharePoint and other Project Management tools - Project Progress Reporting using dashboards or burn down charts, heat maps
- Managing the risk on the program by risk log, evaluating the risk and developing a mitigation plan
- Defining the entry exit criteria for each phase of the project and Conduct Go/No Meeting

Tech Stack: Java, spring boot, Microservices, Web Services, REST API, Cloud – AWS, PL/SQL , CI/CD, Jira,

Citi: Modernize all electronic funds payments systems by establishing a common standard platform based on ISO 20022 Methodology and Standards.

This is a 5-year project taking different countries at a time. The Program consist of 3 major project CBPR+ (Cross border payments), ISO Changes for Ukraine and ISO changes for South Africa. All the SWIFT messages which are coming in as MTXXX messages will get converted to ISO20022 message type. This will help in modern electronic payments system to meet the ever changing regulatory and compliance requirement as well as the emerging payments innovation and in doing so create a future proof system that is able to accept scale, interoperability and flexibility without prejudicing the soundness and integrity required for a robust payment system.

Global adoption of ISO20022 by the SWIFT network system by 2025 covering payments and cash management systems.

Agile Program/Product Manager – Large Program, multiple teams- Followed - SAFe Agile principles and Practices

- Creating the BRD, FRD and the data elements of the new format and the solution delivery.
- Liaising with External stake holders to understanding the regulatory (SAMOS /PASA) requirement and the testing requirement
- Expertise in Design Thinking methodology and practical experience applying it to product development.
- Conduct interviews, workshop, surveys and document analysis to create compressive business requirement
- Strong understanding of consumer product development
- Established and communicate the calendars for iterations and Program increments (PI)
- Pre PI planning, PI Planning event, and Post PI monitoring, facilitated scrum of scrum, Agile release train sync, System Demo and inspect and adopt.

- PI planning event, including acting as master ceremonies, managing time box agenda, coordinating key review decisions and recording the committed objective of the PI
- PI planning – Defining the Agenda, Scope, Story board, Delivery time lines, ROAM
- Help and Facilitate requirements elicitation activities and, where necessary, be able to influence and challenge the business
- Has good understanding to Clearly define business problems/opportunities, business rules, functional and non-requirements as well as user personas and/or stakeholder profiles
- Creating Epics/Features and stories for delivering the specific Product based in the Customer needs.
- Testing – Standalone testing, near partner testing (NPT), E2E Testing, NFT – Non-Functional requirements.
- Market testing or industry Testing – Testing with the external bank and FMI
- Monitor the progress of assigned tasks and take corrective action wherever necessary
- Establish Governance and Defect management and triaging the issues using QC
- Expert in –Using of Tools like Jira, Confluence, SharePoint and other Project Management tools - Project Progress Reporting using dashboards or burn down charts, heat maps
- Managing the risk on the program by risk log, evaluating the risk and developing a mitigation plan
- Present periodic Dashboard reports on the project's status, budget, and quality metrics
- Giving Weekly/Monthly status reports and conducting the meeting with higher managements.
- Preparing the test strategy and test plan for each phase of the project
- Setting up E2E Environment set up with internal and external partners (PASA, SAMOS)
- Managing risks using RAID logs.
- Worked with external vendors/Supplier like IBM, Volante to delivery their code in support our implementation plans and roadmaps identifying opportunities to be faster, better and cheaper.
- Using tools like Jira, Confluence, share point and PTS (Project Tracking system) developing the dashboards and burndown charts
- Defining the entry exit criteria for each phase of the project and Conduct Go/No Meeting

ROI:

XML based, highly structured, extensive rich granular data, Interoperability - bridges the gap between different payment rails (e.g., domestic ACH, real-time payments, and cross-border wires),

Note:

SAMOS: South Africa multiple option settlement - operated by SARB (south Africa reserve bank)

PASA: Payment association of south Africa (operated by SARB)

CBPR: Cross border payments

Tech Stack: Java, Microservices, Web Services, REST API, Cloud – AWS, Oracle/MongoDB, CI/CD, Jira

Virtusa – 2016- to 2019 - Pune as Program Manager / Senior Manager

Client: HSBC | Project: Earth and Moon – RFB Program – UK ring fence Bank .

Delivered multiple inter related projects in a large regulatory program at HSBC – Ring fence Bank, separating HSBC UK from HSBC Bank – Non-Ring fence bank.

The program Earth and moon -The UK Banking Reform Act requires the separation of HBEU's UK retail and SME operations into ring fenced bank (the RFB). The main aim of the project was to separate out the ring fence (RFB) and NRFB bank. This was a regulatory change mandated by the UK government.

All RBWM (Retail banking and Wealth Management) and CMB (Commercial Banking) will fall within the RFB except for few cases where the legislation explicitly prohibits. All GBM (Global Banking and Markets) will fall under Non-Ring Fence Bank. Worked with various teams like payments, authorization, clearing and settlement, core banking, reporting

Delivery Manager for Client Citi : (team size – 100+)

RUBY: RUBY an in-house platform built to support Financial Planning and Analysis (FP&A), CCAR, Treasury, and Risk Management globally for Pre-Provision Net Revenue (PPNR), Balance Sheet forecasting and Interest Rate Risk (IRR) management.

Operational Risk: Op Risk system supports Operational Risk Management functions that include Loss Capture, Risk Capital Reporting and Control functions to ensure that each business has an appropriate control focus and where necessary mandate the modification of in-business or independent control processes. System functionality1 available a) Capture of operational risk event loss data (including Fraud losses) that conforms to the Citigroup Operational Risk Policy b) Operational Risk Capital calculations c) Controls assessment and capture of Risk and Controls Indicators d) Reporting and Data / Scenario analysis tools

TCS – 2004 to 2016 – 12 years in Tata consultancy services (TCS) on various assignment. Loc – USA/UK (10 Yr) and IND (2yr)

Worked with various Major retail clients in USA/UK like Walgreens, Target, best buy, Toysrus, M&S.

Client: Walgreens:

Project: WMS- Fully automated DC and CDI & Loyalty, and POS

Role: Product/Project Manager

Installing a new fully automated Distributions center which include inbound/outbound, location management, shipping, PO etc.

Client – Marks and Spence

Project: WMS – Implementing a New DC

Role: Product/Project Manager

Marks and Spencer (also known as M&S) is a British retailer headquartered in the City of Westminster, London, with over 700 stores in the United Kingdom and over 300 stores spread across more than 40 countries. It specializes in the selling of clothing and luxury food products. This was a large program of 50 M ponds.

The task was to install a new Distribution center with the new package red prairie (external vendor - WMS. Package)

Customization of Red prairie as per requirement of M&S

Responsibilities:

Liaising with business to understand the Food DC (distribution center)

Implemented a new product for foods DC in M& S London (1 Yr.) using the red prairie product.

Creating the integration of red prairie with the other department like, inventory, Purchase order, shipping, logistics, POS

Used customer empathy and design thinking methodology to achieve the customer success

Got Appreciation from the Top Management for delivering the program on time in spite of lot of challenges, hence got a customer satisfaction survey of 10/10

Client: Target

Project: MCIM Program – Multi Channel inventory management Program

Role: Project Manager

Multichannel supply chain encompasses the end-to-end process of getting merchandise. Multichannel inventory program is, managing the inventory across DC, Stores and Dot com (E-commerce). This was a large program which involves work streams like WMS, TMS, Merchandise, dotcom, Item Inventory, PO etc.

The main aim of the project was to manage inventory via different channels

Worked on Waterfall and agile. This project was in phases and once the phase was in production, we had created the agile team for the upgrade of the application's new changes. This was a large project of \$ 60 Millions

Responsibilities across various projects:

- Requirements gathering from User for different modules and preparing the use case
- Preparing roadmap for the complete end to end delivery.
- Converting the business requirements to the HLD and LLD, Code review and fixes
- Project planning giving the milestone date for each phase of the projects/testing based on the inputs from all the work streams.
- Scope Management - Defining scope, Formulates and defines technical scope and objectives of project for project personnel. Creating WBS – deliverables. Base lining the scope
- Cost Management – Budget tracking and base lining the cost. Preparing estimate.
- Giving the Work to offshore for development and tracking/Monitoring the development
- Module planning giving the milestone date for each phase of the Module, testing based on the inputs from all the teams
- Based on the business requirement plan effort and schedule were determined and thus giving the complete budget of the project and also managing the resources
- Collaborate and communicate with Business Units, project teams, vendors, sponsors, and stakeholders in relation to project status, task assignments, vendor activities, financials, change requests, and risk/impacts.
- Onsite-offshore coordination for the team as the development team is located at offshore
- Coordinating with other vendors like SSI for data flow and system testing and issues resolution with them.
- Preparing test strategy for various phases of testing
