About Projects @ PWC (Investment Banking – KYC AML Periodic Review)

- At PWC, worked for a US Investment Bank – KYC AML process which consists of Case management system, Risk Ranking system and Customer Database Management system.

- All the above systems are used for conducting periodic review for existing clients of the bank where the KYC/AML is verified and updated as per the risk ranking of the customers.
- Case Management system is the primary system where the periodic review is conducted, Risk Ranking system calculates the risk of the bank's customers and Customer Database Management System is where the customer's information is available on real time basis.
- Mainly involved in various priority requirements from Clients across the world to Introduce and update functionalities of Case Management system while conducting the periodic review of the customers.
