

Nisha Singh

Technical Product Owner

8050075317/ 9611005522

Nishasingh.nisha@gmail.com

About me

A Technical Product Leader with over 15 years of IT experience, including 5+ years as a Technical Product Manager / Product Owner driving end-to-end product development for enterprise and SaaS platforms. Experienced in defining product vision, roadmap strategy, product requirements, backlog prioritization, and delivering customer-centric solutions through Agile and cross-functional collaboration.

Strong experience in Generative AI, Agentic AI, RAG, Azure OpenAI, Prompt Engineering, AI-powered chat/voice solutions, Azure, Azure DevOps, API integrations, Copilot Studio, and Power Automate. Experienced in translating business problems into AI-enabled product opportunities, prototyping AI solutions, defining success metrics, and partnering with engineering and data teams to move AI capabilities from discovery and POC through product delivery and continuous optimization.

Bridges product strategy and technical execution, with experience across Healthcare, Banking/Financial Services, Telecommunications, Network & Security, and enterprise SaaS environments.

AI / GenAI / Agentic AI Product Expertise

Generative AI | Agentic AI | RAG | Azure OpenAI | Microsoft Azure | Azure DevOps | LLM | Prompt Engineering | AI Product Lifecycle

1. Experience in Generative AI, Agentic AI, RAG (Retrieval-Augmented Generation), Azure OpenAI, Prompt Engineering, and AI-powered conversational solutions.
2. Designed and prototyped multi-step AI workflows, RAG-based solutions, tool-enabled automation, decision-support workflows, and controlled human-in-the-loop patterns.
3. Worked with Azure and Azure OpenAI to explore and prototype enterprise AI use cases aligned with business and operational requirements.
4. Defined AI product requirements, user journeys, success criteria, quality metrics, user feedback mechanisms, and continuous improvement approaches.
5. Experience using Azure DevOps for product backlog management, requirements, user stories, sprint execution, tracking, and Agile delivery.
6. Evaluated AI-enabled solutions using baseline performance, response quality, efficiency, user feedback, adoption, and business-impact metrics.
7. Identified AI and automation opportunities by analyzing customer feedback, operational inefficiencies, product analytics, and business requirements.

Positions Held

- Technical Product Manager
- Technical Product Owner
- Scrum master
- Tech Project manager
- Lead QA Automation
- Developer

Education / Certifications

- Executive Digital Product Management from IIM Bangalore
- Generative AI & Agentic AI with Business Application from IIM Bangalore
- PMP Certified by PMI
- CSM by Scrum Alliance
- CSPO by Scrum Alliance
- Bachelor of Computer Application from Ranchi University

Areas of Expertise

Consulting Engagements

- Digital Product Management
- Design Thinking
- Project Management
- Agile / waterfall/ DevOps
- Technical Leadership
- Technologies - C, C++, Java, SQL, Python, ETL and Databricks.
- UHG
- Cisco
- Citi Bank
- Standard Chartered Bank
- Vodafone (Payment /Collection/Billing)
- Western Union Bank
- NBCU

Industry Sectors

- Finance / Banking
- Health care
- Telecommunication
- Network & Security

Tools

- JIRA- Execution
- Confluence- Documentation
- AHA- Planning
- Miro- Discovery

Organization: Wipro

Period: Jan 2022 till Date

Organization: Capgemini

Period: Nov 2013 to Dec 2021

Organization: Infinite Computer Solutions (India) LTD

Period: June 2010 to Nov 2013

Organization: Amdocs

Period: Jan 2010 to June 2010

Experience and Accomplishments

Technical Product Owner –Cisco (Wipro Managed Project)

- Developed and owned the product vision, strategy and roadmap for assigned software product feature.
- Partnered with Engineering, Operation, UX and cross- functional stakeholders to identify repetitive and high-friction operational processes and translate them into automation-first product opportunities.
- Manage all aspects of new products offerings, including concept validation, pricing and demonstration.
- Identified opportunities to apply AI and Automation across product and operational workflow by analyzing user feedback, process inefficiencies, product analytics, and business requirements.
- Plan Product Feature launches through the Various stages of Beta.
- Bring Voice of Developer and voice of Customer back to the platform feature crew and help drive backlog prioritization, envisioning and innovative extensibility features, informed by market feedback
- Prioritized features and enhancement based on business value, customer impact and technical feasibility.
- Keep up with changes in software development tools and techniques used in the product development lifecycle.
- Identifies and track product issues in relation to performance, customer acceptance, customer risk, compliance and manufacturability.

- Regular communicates product status, updated and progress to stakeholders at all levels, both internally and externally.
- Establish product Success criteria using customer feedback, adoption analytics, operational metrics, quality, risk and business impact to continuously optimize product outcomes.
- Developed PRD Lightweight prototype and POC to validate product concepts, workflow improvements, and Ai-enabled automation opportunities, prioritize opportunities and drive execution.
- Led product requirements and backlog prioritization for Databricks-based ETL and data analytics initiatives, ensuring reliable, scalable, and business-focused data products.
- Defined user stories, acceptance criteria, and data quality requirements workflows using Databricks

Technical Product Owner –SCB (Wipro Managed Project)

- Managed and groomed products Backlog translated user objective, persona, scenario, and business need into epics, user stories, acceptance criteria, and high-level requirements.
- Worked with Partner and cross-disciplinary team to identify customer needs, translate them into product requirements and deliver differentiated solutions.
- Uses data to build insights into product or platform requirements consistent with the shared vision for the product.
- Responsible for building and grooming product backlog, including writing, creating Confluence pages of Planned features also involved in RCA
- Manage project Schedules, identify risk and communicate them to project Stakeholders.
- Bring Voice of Developer and voice of Customer back to the platform feature crew and help drive backlog prioritization, envisioning and innovative extensibility features, informed by market feedback.
- Driving the projects and be the points of Contact on the team
- Partners with the product Manager to identify new product opportunities that reflect the needs of customers.
- Prioritize features, enhancements and fixes based on business value, customer feedback and market trends
- Analyze, Track and evaluate product metrics Including work to time, cost and quality target across the Product development life cycle.
- Articulating feature requirements and acceptance criteria to the development team in terms of user's objective, users' personas and scenario
- Communicate with stakeholders to understand their needs and expectations while managing their priorities and concerns.
- Review completed work against the acceptance criteria and decide whether it meets the required quality and functionality
- Regular review and refine the backlog with the team to ensure there are enough "ready" stories to load the next 1 to 2 sprints
- Work with release management and other stakeholders to plan and execute release, ensuring they meet business objectives
- Use data and feedback to continuously improve the product and adjust priorities.
- Support and encourage collaboration within the team to achieve product goals and solve issues.

- Keep-up to date with industry trends and market conditions and competitive products to make informed decisions and recommendations.
- Make key decisions about product features, priorities, and trade-offs to balance competing demands and deliver value.

Product Owner: - UHG -(Wipro Managed Project)

- Owned product vision, strategy, roadmap, and backlog for enterprise software products, translating customer and business needs into prioritized product features and measurable outcomes.
- **Led product discovery and requirements for Generative AI and Agentic AI use cases**, identifying opportunities to automate repetitive operational workflows and improve user productivity.
- **Designed and prototyped RAG-based AI solutions using Azure OpenAI**, exploring retrieval-augmented conversational experiences, contextual responses, and enterprise knowledge access.
- Worked with engineering teams to define **RAG workflows, knowledge retrieval requirements, prompt/context handling, response quality criteria, and human-in-the-loop controls** for enterprise AI use cases.
- Leveraged **Microsoft Azure and Azure OpenAI** for AI solution prototyping and enterprise product experimentation, translating business requirements into scalable AI-enabled product capabilities.
- Used **Azure DevOps** for product backlog management, feature/user-story tracking, acceptance criteria, sprint execution, release tracking, and cross-functional delivery.
- Developed PRDs, lightweight prototypes, and POCs to validate **AI-enabled automation and RAG use cases** before engineering investment, helping stakeholders evaluate feasibility, user value, and business impact.
- Partnered with Engineering, Operations, UX, and cross-functional stakeholders to identify high-friction processes and convert them into **AI-first product opportunities**.
- Defined product success criteria using customer feedback, adoption analytics, operational metrics, quality, risk, and business impact to continuously optimize AI-enabled solutions.
- Led product requirements and backlog prioritization for **Databricks-based ETL and data analytics initiatives**, ensuring reliable, scalable, and business-focused data products.

- **Scrum Master**– Standard Chartered Bank (**Payment / Reporting/Alerts**) (SCB managed Project)

- Manage two Squad and Work with Cross-Functional Team of Talented, Supportive, and Motivated colleagues.
- Worked with product Owners / Technical Delivery team and scrum team to align expectation on schedule and efforts and ensure good quality of delivery.
- Successfully Delivered the critical task i.e. migrating the application from monolith to microservices architecture. Vulnerability Management and developing new features & Enhancement and migrate the bank report from BIRT to Jasper
- Manage Regular reflection and Checkpoints with Product, Development, Release, and Iteration
- Coached Scrum teams and supporting product owners to remove impediments and backlogs, enhance velocity, and help teams to adopt Agile methodology.
- Hold Regular Reflections and checkpoints with product, Development, Release, and Iteration Manager on the release scope and delivery feasibility, with specific attention and high priority item planned for the release.
- Drive Scrum ceremonies (estimation, daily stand-up, sprint planning, retros, etc...)
- Work with the team on ADO board, JIRA setup/fixes, Dashboard enhancements, reporting.
- Coach the team members in Agile Frameworks and Training needs
- Monitor and Report on Product Burndown and Velocity
- Developing strategies for continuous monitoring, evaluation and improvement of all aspects of product delivery including but not limited to, analysis of customer feedback, facilitation of agile ceremonies and artefact production, identification and mitigation of risks
- Help the team find out the way to operate more efficiently, keep the team accountable to their commitments, and promote a self-organizing mind set.
- **Scrum Master –: Western Union Bank (Capgemini Managed project)**
 - Leads Squad and worked closely with product Owners, coordinating product backlog, and grooming and story estimation.
 - Facilitate scheduled ceremonies (backlog, estimation, daily stand-up, sprint planning, retros, etc...)
 - Facilitated Release Planning, Sprint Planning, Retrospective meetings
 - Work with the team on JIRA setup/fixes, Dashboard enhancements, reporting, etc...
 - Facilitated Release Planning, Sprint Planning, Retrospective meetings.
 - Follow-up with the stakeholders on impediments resolution
 - Removed team impediment daily to allow the team to deliver the sprint goals and Deliverable
 - Determining the team's capacity/velocity for the upcoming sprints.
 - Lead daily scrums and scrums of scrum to communicate current days goals, previous day achievements, and impediments or concerns in an Agile Scrum environment.
 - Coached and mentored team members, stakeholders, and leadership on the benefits of Agile and Scrum
 - Tracked daily progress using Burn down chart metrics.
 - worked with projects in functional issues and helping with best practices

Project Lead QA Automation- NBCU

- Designing, Enhancing and Executing the Business Scenarios for CAFE Application (SAFE-Flaptracks-NetSuite) Using JIRA and ALM.
- Sprint planning and User Story Estimation
- Analysis of the User story and Creating Test Strategy document
- Test scenario and Test case Preparation (Developed test scenario, test cases for Functional
- System Integration Testing on Application (SAFE, Flaptracks and Oracle NetSuite
- Analysis the User stories and Creating Test cases and execution.
- Execution of Test Set in Quality Center using Test Lab Module
- Smoke and Sanity testing for every sprint
- Performed Exploratory testing at the end of each sprint before QA sign off on
- The application to ensure that the business scenarios are working as expected
- Sending BI- weekly report, Monthly deck and Metrics report of the project team

Java Developer - NBCU

- Understanding the requirements and converting those into functional requirements, design and development.
- Coordinate with other developers and software professionals
- Developed multiple modules using React 16.1 for DMS
- Coordinate with other developers and software professionals
- Code Reviews and quality checks
- Dynamically generated web pages in html using Thyme leaf.
- Provide application security (authentication, authorization and other security features) using Spring security.
- DB design to store data in Database
