

PRAVEEN JUDE J

Power Platform & Enterprise Solutions Specialist

CONTACT NO: 91-9789260868

EMAIL: praveenjude.js@gmail.com

OBJECTIVE

Proven track record of successfully serving multiple domain and customers with total of 14+ years of experience of building strong stakeholder relationships and maintaining long-term client partnerships, including a single customer engagement spanning more than 6 years.

As an app develop enthusiastic developing, deploying, and managing enterprise applications using Copilot Studio, SharePoint, Power Platform, Microsoft Azure, .NET technologies and GCP with strong expertise in application development, workflow automation, and system integrations, with proven ability to deliver scalable, secure, and user-centric solutions.

SKILLS

Agentic AI, Generative AI and Copilot Studio

.NET 8, C#, Asp.net Core

SharePoint Online, OnPremise

Power Platform: Power Apps (Canvas & Model-driven apps), Power Automate (flows).

GCP Services - Cloud Run, Spanner, Big Query, Task Schedule ETL pipelines micro service using Cloud-run, Spanner. Big Query

Cloud: Azure - Data Factory, App Services, Functions, Azure Blob, Event Hub, SQL, Logic App

Frontend: React.js, Typescript, JavaScript (ES8+), HTML5, CSS3.

Backend: ASP.NET Core, C#, Web API, NodeJS, Python 3

Database: SQL Server, T-SQL, Stored Procedures, Performance Tuning.

Dev Ops & Tools: MS Copilot Studio, Agentic AI, ChatGPT, Claude code, PowerShell (PnP/SharePoint), IIS, build/release pipelines (Azure DevOps/Git Hub)

Others: Agile/Scrum, CI/CD, Integration with Microsoft 365 ecosystem.

Education:

Master in Computer application
-2008-2011

LINKEDIN: <https://www.linkedin.com/in/praveen-jude-j-9598a04a/>

PROFESSIONAL SUMMARY

Nexware Technologies - Project Lead - | Oct 25 ~ May 26

- Leading Power Platform Project integrating with SharePoint
- Architect Designing and developing .NET and Power Platform solution building product-based solutions with automate solutions.
- Mentoring and trainer on Power Platform and governance

Tata Consultancy Service - Lead & Developer | Dec16 ~ Sep25

- **GCP services** using Cloud-Run, Spanner, Big Query for building ETL micro services pipelines using Python
- Stakeholders interaction to translate business needs into technical solutions, create **project plans and timelines**.
- End-to-end develop and delivering custom SharePoint solutions, overseeing both **on-premises** and **SharePoint Online** environments using **SPFx, Power Apps, document automation, and JavaScript Add-ins**.
- **Extensive Power Apps design solution reusable patterns and component libraries development** and extend SharePoint functionality, including custom reporting, search capabilities, and document management features. integrate with SP, Azure, SQL & custom connector, ALM framework with defined governance **Automating workflows and approvals** and REST API integration custom UI.
- **Best practices, code reviews**, and ensuring adherence to **coding standards** and project timelines.
- Collaborated with **UX/UI designers** to ensure seamless and **responsive SharePoint branding**, enhancing user experience across web and mobile devices.

Cognizant - [SharePoint Developer] | 2014 – 2016

- Developing service solution for bank stream using **.NET WCF stack** Integrate with SharePoint 2013 using SOAP API.
- Building internal site for BCP with .NET multi-grid controls using Repository MVC pattern design with generics and collection Extensively worked on SP integrate with designer workflow

Wipro Tech – [.NET Developer] | 2012-2014

- Developing **Web form** using **Web API** in **.Net application** with **SQL database**.

WORKING EXPERIENCE

Project Name: FUSO : 7 month

Client	FUSO
Role	Tech Lead, Trainer & developer
Team Size	8
Technologies	.NET 8, SharePoint Online, Office 365 product, SPFX, ReactJS, JavaScript, Node, Power Apps, Power Automate

Responsibility:

- Extensive Power Apps design solution reusable patterns and component libraries development. ALM framework with defined governance Automating workflows and approvals with report generation and automated paginated Power BI reports via Power Automate service and ETL data works.
- Provided training and mentoring for Power Platform solutions and building solutions.

Project Name: United Parcel Services: 1.5 years

Client	United Parcel Services
Role	Project Lead and Lead Architect
Team Size	12
Technologies	GCP - ETL pipelines micro service using Cloud-run, Spanner, Big Query

Description:

As a Seasoned Tech Lead with architecting and delivering cloud-native solutions on Google Cloud Platform. Expert in designing micro services on **Cloud Run**, globally-consistent transactional storage with **Cloud Spanner**, and robust ETL/streaming pipelines (batch & streaming) to transform and deliver mission-critical data for analytics and operational systems.

Responsibilities:

- Stakeholder's engagement translate business needs into technical solutions, create project plans and timelines.
- Created detailed BRD, FRD, and micro-service wireframes preparing architectural flow and data distribution across client-facing retail application.
- Performed gap analysis and recommended system enhancements that reduced manual work by 25%.
- Worked in an Agile-Scrum environment, contributing to sprint planning and retrospectives.
- Handling team by providing solution and guidelines for code reusability and technical guidelines, best practices, code reviews, and ensuring adherence to coding standards and project timelines.
- Implemented event-driven ingestion patterns (Pub/Sub → Dataflow → Big Query/Spanner) for near-real-time processing and derived metrics used by dashboards and operational services.
- Defined data modeling and partitioning strategies to optimize Spanner performance and cost (proper use of primary keys, interleaved tables, and read vs write locality).
- CI/CD for containers and infra: Git-based pipelines for Dockers builds, vulnerability scans, Cloud Build triggers, and automated deployments to Cloud Run with traffic splitting and canary rollouts.

Project Name: JetBlue Airlines: 6 years

Client	JetBlue Airlines
Role	Project Lead & developer

Team Size	2
Technologies	SharePoint Online, Office 365 product, SPFX, ReactJS, JavaScript, Node JS, Power Apps, Power Automate, Custom connector, Asp.Net, Azure Services, SQL,

Description:

The project is for Airlines domain, specializing in **SharePoint, Power Apps and .NET technologies** for developing and enhancing internal applications. Skilled in building **enterprise portals, workflow automation, crew management solutions, and operations support tools**, ensuring seamless collaboration and improved business processes across Airline departments.

Responsibilities:

- Designed and developed **internal applications** for airline operations, including **crew scheduling, ticketing support, compliance tracking, and maintenance reporting** using **ASP.NET, C#, and SharePoint**.
- Built **custom SharePoint solutions** (web parts, workflows, and lists, document libraries) to manage critical airline documentation and streamline internal approvals.
- Developed **WCF services / REST APIs** for integration between airline operational systems and internal portals.
- Implemented **SharePoint-based intranet portals** for knowledge sharing, flight manuals, and operational announcements.
- Created **automated workflows** for leave requests, incident reporting, and crew onboarding using **SharePoint Designer / Power Automate**.
- Developed **SPFx Application Customizers** to inject custom banners, notifications, and analytics across airline intranet portals.
- Built **SPFx Field Customizers** to visually represent operational data (e.g., crew status, flight status) in SharePoint lists.
- Implemented **SPFx Command Sets** for bulk operations like exporting passenger manifests or triggering workflows.
- Integrated **SPFx Extensions with REST APIs, Microsoft Graph, and custom .NET services**.
- Managed **ALM for SPFx solutions** using **Azure DevOps pipelines** for CI/CD Optimized existing .NET applications for **performance, scalability, and security**, ensuring compliance with airline IT policies.
- Collaborated with business analysts and airline operations teams to **gather requirements** and deliver tailored solutions.
- Migrated legacy airline applications into **modern SharePoint and .NET frameworks**, improving system reliability and user adoption.
- Provided **production support and maintenance** for critical internal airline applications, ensuring minimal downtime.
- Designed and developed **Canvas Apps and Model-Driven Apps in Power Apps** to digitize airline/ internal processes such as crew management, compliance tracking, and operational reporting.
- Implemented **SQL Server, and SharePoint** as data sources, ensuring scalable and secure storage solutions.
- Created **custom connectors** to integrate with **REST APIs, WCF services, and Azure Logic Apps**, enabling seamless data flow between internal .NET applications and Power Platform.
- Automated workflows and business processes using **Power Automate (Flow)**, including **approval flows, notifications, and system-to-system integrations**.
- Applied **role-based security** and **environment governance policies** for managing app access and compliance in enterprise setups.
- Developed **reusable components and templates** for faster delivery of multiple apps across airline business units.

- Embedded **Power BI dashboards into Power Apps** for interactive data visualization and real-time operational insights.
- Worked on **ALM (Application Lifecycle Management)** for Power Platform using **Solutions, Azure DevOps pipelines, and GIT repositories**.
- Implemented **offline capability** in Power Apps for crew operations requiring mobility with intermittent connectivity.
- Collaborated with business users to **gather requirements, design wireframes, and conduct UAT sessions**, ensuring adoption and usability.
- Optimized app performance using **delegation-aware queries**, proper data source design, and formula best practices.
- Extended Power Apps functionality using **Power Fx formulas, JavaScript, PCF (Power Apps Component Framework) controls, and custom APIs**.
- Supported **governance and monitoring** by configuring **Power Platform Admin Center, DLP (Data Loss Prevention) policies, and analytics**.

Project Name: Pharmaceutical Industry | 8 months

Client	Pharmaceutical plant
Role	Power app developer
Team Size	1
Technologies	Power apps, Power Automate, SharePoint online, Governance, Auditing

Description:

Build a **secure, compliant Power Apps survey** (Canvas or Model-driven) for the pharma company to collect employee / clinical / QA feedback, integrate with backend systems (SharePoint/Dataverse/SQL), automate approvals/notifications (Power Automate), and provide auditable results for stakeholders.

Responsibilities:

- Designed and developed Canvas and Model-Driven Apps using Power Apps, integrated with SharePoint Online, SQL Server, and Data verse.
- Automated workflows with **Power Automate** for approval processes, notifications, and data synchronization.
- Developed **custom connectors** to integrate external APIs and Azure services (Logic Apps, Functions).
- Implemented **role-based access control, DLP policies, and environment governance** for secure app deployment.
- Optimized app performance using **delegation-aware queries, reusable components, and Power Fx formulas**.
- Built and deployed **PCF controls** to extend Power Apps UI capabilities.
- Implemented **ALM pipelines with Azure DevOps** for solution deployment across Dev/Test/Prod.

Project Name: Kredit Abb Insurance & Cera bank | 1 year

Client	KBC
Role	SharePoint Developer & Administrator
Team Size	1
Technologies	SharePoint 2013, Office 365, SQL, Asp Net (C#), JavaScript, JQuery Windows 2012,

Description: The Project is for the KBC (Kredit AbB Insurance Cera bank). It's a banking agent connected with Insurance at Belgium.

The project was started as POC with SharePoint 2013 on premise and later the product was developed and migrated to SharePoint Office 365.

Project Name: Chennai Metro Rail Limited | 2 years

Client	CMRL
Role	SharePoint Developer & Administrator
Team Size	4
Technologies	SharePoint 2010, SQL, Asp Net 3.5 (C#), JavaScript, JQuery Windows 2008 R2,

Description: The Project is for Chennai Metro Rail Ltd, It is Government agent connected with Railways Department in India. It's a Document Management System where documents flows to several department and goes for an approved process. The Contractor uploads the documents in DMS and submits to the respected department. The task is assigned to the internal team and they review these documents and goes for approval process. Once the flow is completed based on the time interval expiration policy is applied to the documents and they are disposed from the site. A report generation based on documents uploaded statistics, department-wise reports, Contractor reports,

Responsibilities:

- As a developer involved in design and developing the application using SharePoint 2010
- Query the data from Generic Collections list using Linq and Loop Expression
- Involved in developing custom Timer Jobs, custom document Expiration policy.
- Involved in developing custom sequential workflow and jquery webparts
- Data binding was extensively used to bind various controls to the data from database. Grid View controls was used in displaying rows of data in a customized template format.
- Used Generic Collections to retrieve the data
- Involved in configuring Search Service and Content database and SharePoint Service database movements.

Project Name: LNT IDPL | 1 year

Client	LNT IDPL – Chennai, India.
Role	SharePoint Development & Administration
Team Size	2
Technologies	SharePoint 2010, SQL Server 2008 Enterprise & Express, C#.net

Description: The application is for LNT IDPL. It's approval workflow where users submits their request in the board proposal along with the attachments and submits to approvers. The approver will review the users request and either forward to LS Head or rejects. The rejected proposals goes back to The approved proposals will move to Legal & Secretarial Head, either the LS Head can close the proposal or further move its legal and secretarial independent body. After their review the proposal can either approves or rejects and sends that status back to LS head. Finally LS Head will close the proposal based on the status of independent body. The dashboard serves to count the incoming task proposals to each department. It composes of two module where first module is dedicated to Board proposal, True copy and other services and second module is a legal workflow.

Responsibilities:

- Involved in Page design ASP.net page development
- Involved in configuring Enterprise search and User Profile and MySite.
- Developed various custom webparts, branding, and UI Customization.

- Data binding was extensively used to bind various controls to the data from database. Grid View controls was used in displaying rows of data in a customized template format.
- Involved in using ADO.NET to retrieve and send data to database.
- Developed SQL stored procedures and functions to interact with the database.
- Involved in Unit/Integration testing various modules of the project.

Project Name: TVS & Sons | 4 months

Client	TVS & Sons – Chennai, India.
Role	SharePoint Development & Administration
Team Size	2
Technologies	SharePoint 2010, SQL Server 2008 Enterprise & Express, C#.net

Description: The project is for TVS & Sons limited. It's a SharePoint Intranet portal for document management system and sharing the user information. Its basic intranet site for users knows their colleague details and their posting

Responsibilities:

- Involved in Page design and developing landing pages includes custom webparts, branding and custom page layouts.
 - Involved in developing custom document expiration policy
 - Involved in configuring Enterprise search and User Profile and SharePoint server farm

Project Name: LUCAS TVS: | 2 months

Client	LUCAS TVS
Role	SharePoint Development
Team Size	2
Technologies	SharePoint 2010, SQL Server 2008 Enterprise & Express, C#.net

Responsibilities:

- Involved in Page design and developing landing pages includes custom webparts, branding and custom page layouts.
- Involved in developing custom document expiration policy
- Involved in configuring Enterprise search and User Profile and SharePoint server farm

Project NAME: IFMR : 3 months

Client	IFMR
Role	SharePoint Development
Team Size	3
Technologies	SharePoint 2010, SQL Server 2008 Enterprise & Express, C#.net

Responsibilities:

- Involved in Page design and custom menus contains jQuery slider dynamic links features.
