OBJECTIVE

To leverage my specialized expertise in Azure ETL Automation and Python development with web scraping to drive innovative technological solutions and contribute to cutting-edge data-driven projects.

PROFILE SUMMARY

- Highly skilled Python Developer with 5.4 years of comprehensive IT experience, specializing in advanced Python Django web development and web scraping techniques.
- Designed and implemented end-to-end data pipelines, utilizing **Azure Data Factory**, to transform raw data into actionable insights.
- Employed **Azure Databricks and PySpark** for advanced data processing and analytics, ensuring optimal performance and scalability.
- Spearheaded the development and implementation of storage solutions, utilizing **Azure Data Lake Gen2, and Azure SQL**. These efforts resulted in a 50% reduction in data retrieval time and improved overall system performance.
- Expert in designing and implementing robust web scraping solutions using cutting-edge Python libraries including **BeautifulSoup, Requests, and Selenium WebDriver**.
- Developed models for product tracking, user management, and vendor integration using Django ORM.
- Created a unique product ID generation system for users purchasing directly from companies, enabling seamless tracking of product services and insurance.
- **Django ORM**: Used for efficient database interactions, complex queries, and relationships between models (e.g., Product, User, Vendor, Insurance).
- **Django REST Framework (DRF)**: Built RESTful APIs for vendor integration and external system communication.

- Proficient in extracting, transforming, and analyzing data from diverse web sources, creating sophisticated data collection and processing frameworks.
- Advanced skills in Python ecosystem including **Django**, data manipulation with **Pandas**, and integration with various databases and APIs.
- Experienced in end-to-end project development, from requirements gathering to deployment, with a strong focus on creating efficient, maintainable Python solutions.

ACADEMIC QUALIFICATION

BE ECE **81 %** , Government College of Engg , krishnagiri in 2007-2011

HSC with **89 %** , Bishop Ubagrswamy higher Secondary School in 2005- 2007

10 th with **92 %** , Govt higher Secondary School in 2002-2004

TECHINICAL SKILLS

Cloud & Deployment	: Azure ADF, DataBricks, ADLS, AWS EC2, AWS S3, Docker
Programming Languages	: Python, JavaScript (backend integration with basics), HTML, CSS
Data Processing & Analysis	: DataBricks, PySpark, Pandas,
Web Frameworks	: Django, Django REST Framework
Scraping Tools	: Selenium, Beautiful soup, Requests
Databases	: Azure SQL, Django ORM, MySQL
Development Tools / IDEs	: VS Code, IDLE
Tracking Tools	: Zoho sprint
containerization Tool	: Docker
Testing Frameworks	: Unit test,
Version control	: Git, Git Hub
Development Methodologies:	MVT architecture, Agile Process
API Testing	: Postman

EXPERIENCE

Shravas Technologies IT India Pvt Ltd.

Software Developer 08 th May 2025 to present

Mahendra Next Wealth IT India Private Limited, Salem

Python Developer 10 th November 2023 to 7th May 2025

ADM Developers, Coimbatore

Programmer Analyst 12th Aug 2019 to 28 th October 2023

PROJECTS

Project 1 – ADM Developers, Coimbatore

Project Name : Reg Insurance Product (Product Management and Tracking System)

Technologies : Python, Django, DRF,, MySQL, AWS (S3, EC2)

Backend Development

- Designed and implemented a comprehensive Insurance product management system using Django and Django REST Framework
- Developed complex data models to track product lifecycle including insurance, warranty, and Annual Maintenance Contracts (AMC)
- Created sophisticated user authentication and role-based access control systems for different stakeholders (users, vendors, and companies)
- Implemented automated calculation systems for product resale values based on service history and condition
- Built notification systems using Django signals and Celery for time-sensitive warranty expiration

Project 2 - Mahendra Next Wealth IT India Pvt Ltd, Salem

Project Name : Web Scraping & Data Automaion in Azure & API Development

Technologies : Python, Azure Data Factory, DataBricks, Django, Selenium,

Tools used : VS code, Git, IIS server, MySQL, Postman,

Web Scraping and Data Automation

- Designed and implemented end-to-end data pipelines, utilizing **Azure Data Factory**, to transform raw data into actionable insights.
- Employed **Azure Databricks and PySpark** for advanced data processing and analytics, ensuring optimal performance and scalability.
- Spearheaded the development and implementation of storage solutions, utilizing **Azure Data Lake Gen2, and Azure SQL**. These efforts resulted in a 50% reduction in data retrieval time and improved overall system performance.

- Designed and implemented sophisticated web scraping solutions using advanced Python libraries including **BeautifulSoup, Requests, and Selenium WebDriver**.
- Developed robust data extraction frameworks capable of scraping complex websites with multiple layers of pagination and dynamic content.
- Created custom scraping scripts to extract structured data from diverse sources, including Startup company websites, financial websites and Insurance company websites.
- Implemented intelligent scraping techniques to handle:
 - Dynamic content loaded via JavaScript
 - Websites with complex authentication mechanisms
 - Anti-scraping protection and rate limiting
- Developed proxy rotation and user-agent switching mechanisms to ensure consistent and uninterrupted data collection.

Project 3 – Shravas Technologies IT India Pvt Ltd, Bangalore

Python Development and Data Processing in Azure Cloud

- Designed and implemented efficient data pipelines using **Azure Data Factory**, and **Databricks** to transform raw data from source to mart layers, resulting in a 40% reduction in processing time and improved decision- making.
- Spearheaded the development and implementation of storage solutions, utilizing **Azure Data Lake Gen2, and Azure SQL**. These efforts resulted in a 50% reduction in data retrieval time and improved overall system performance.
- Built end-to-end Python applications with focus on scalability, performance, and maintainability.
- Developed data processing pipelines to transform raw scraped data into clean, structured formats using Pandas and NumPy.
- Created automated workflows for:
 - Data cleaning and preprocessing
 - Advanced data transformation
 - Statistical analysis and visualization
- Implemented efficient data storage solutions using:
 - SQL databases (MySQL, SQLite)
 - Excel file and JSON file formats
- Developed RESTful APIs using Django Rest framework to expose scraped and processed data.

DECLARATION

I here by confirmed that the given above details are true to the best of my knowledge.
