

Prudhvi Teja G

Java/AI Engineer

Address : Bangalore, India 560087

Phone : +917019517636

E-mail : dpawankumar15021986@gmail.com

Professional Summary:

With over 7 years of rich experience in Information Technology, I have demonstrated expertise in the end-to-end process of software systems, encompassing analysis, design, development, and testing. My specialization lies in **Java**, **J2EE**, and **Cloud technologies**, with a keen focus on **GCP** and **AWS** cloud infrastructures. I possess a proven track record of successful project delivery, emphasizing a deep understanding of various technologies and a commitment to achieving excellence in every phase of the software development life cycle.

Key Technical Skills

- ◆ **Programming/Scripting Languages** : Java/J2EE
- ◆ **Databases** : Informix, SQL, MongoDB, Cassandra and Oracle
- ◆ **J2EE Technologies** : Hibernate, JNDI JDBC, WEB SERVICES, Gradle.
- ◆ **Web Technologies** : HTML , CSS , JavaScript, HTTP, Json, HTML
- ◆ **Application Servers** : Tomcat, WAS, Web Logic, JBoss EAP 7.0
- ◆ **Web Communication** : SOAP , REST and GraphQL
- ◆ **Spring Frameworks** : Spring MVC, Spring WS, Spring (ORM, DI and AOP), Spring Security, Spring Boot, Spring JPA, Micro Services, Spring Gem Fire and Unix shell scripting
- ◆ **Microservice Tech Stack** : Docker, Kubernetes, Service Mesh, API Gateway(APIGEE) , IAM, Swagger
- ◆ **Continuous Integration/ Dev Ops** : Kubernetes, Docker, Jenkins, Terraform, Skaffold, Gradle, Ant, Maven
- ◆ **Cloud Platforms** : **GCP**(Google Cloud Platform) - GCS, Big Query, Cloud Function, GKE, Cloud SQL, Data Flow, Cloud Scheduler.
- ◆ **AWS** (Amazon Web Services) – EC2, S3, EKS, RDS, Lambda Function.
- ◆ **Gen AI**- NLP, Machine Learning, Vertex AI (Gemini Pro), LlamaIndex, LangChain, GenAI Toolbox, FastAPI, Python, RAG, Prompt Engineering, Cloud Functions, BigQuery, Firestore, FAISS, Vector Search, Tool Calling, PII Redaction, CSAT Evaluation, LLM Orchestration, Google Cloud (GCP).

Education

Apr 2013 -
Apr 2019 KL University - Btech

Work Experience:

Organization	Designation	Duration
Hyroot Cyber Technologies Private Limited	Software Engineer	June 2019 – Sept 2022
Cognizant Technolgy Solutions	Senior Software	Oct 2022 – Dec 2023
HR Talent Sol PVT LTD/ Riddhi Corp Pvt Ltd	AI Engineer	Jan 2024 – Sept 2025

Work History:
Current Project:

Time: Jan 2024 – Current
Company: HR Talent Sol PVT LTD/ Riddhi Corp Pvt Ltd
Client : Aviva Insurance
TITLE: AI-Driven Medical Claims Processing System for Aviva Insurance using Vertex AI and RAG
TEAM SIZE: 50
ROLE: AI Engineer

Technologies Used:
Vertex AI (Gemini Pro), LangChain, LlamaIndex, GenAI Toolbox, FastAPI, Python, Cloud Functions, BigQuery, Firestore, PostgreSQL, FAISS, Tool Calling, Prompt Engineering, LLM Orchestration, PII Redaction, GCP IAM, Secret Manager, Google Cloud (GCP)

Description:
The project focused on building an intelligent medical claims processing platform for **Aviva Insurance**, utilizing cutting-edge **GenAI technologies** to automate and optimize claim workflows. The solution leveraged **Vertex AI (Gemini Pro)** for natural language understanding, integrated with **LangChain, LlamaIndex**, and **FAISS** to implement a robust **Retrieval-Augmented Generation (RAG)** framework.

By combining **NLP, machine learning**, and **vector search** with structured data access from **BigQuery** and **Firestore**, the platform enables accurate interpretation of claim requests, contextual document retrieval from internal policy documents, and real-time decisioning. Built with **FastAPI and Python**, the backend supports secure API communication, integrates with enterprise claim databases, and applies **PII redaction, tool calling**, and **CSAT evaluation** for compliance and user experience optimization.

- Responsibilities:**
- ❑ **Developed modular APIs** using FastAPI and Python to connect LLM outputs with internal policy databases (BigQuery, Firestore, PostgreSQL) and document vector search (FAISS).
 - ❑ **Implemented LLM orchestration workflows** with tool calling, prompt engineering, and LlamaIndex to deliver accurate, context-aware responses grounded in Aviva's proprietary documents.
 - ❑ **Built secure data pipelines** ensuring PII redaction and compliance, integrating GCP IAM, Secret Manager, and cloud-native security best practices.
 - ❑ **Deployed and optimized** components via Cloud Functions and monitored system performance with user feedback loops and CSAT evaluation metrics.

- Impact:**
- Automated over **65% of routine claims** with intelligent document grounding and database validation.

- Reduced average claim processing time by **75%**, increasing user satisfaction and operational efficiency.
- Established a reusable, secure **GenAI foundation** for other insurance workflows (fraud detection, underwriting, customer support).

Project 3:

Time: Oct 2022 – Dec 2023

Company: Cognizant Technology Services

TITLE: Lloyds Open Banking

Client: Lloyds Bank LTD

TEAM SIZE: 300

ROLE: Technical Architect

Technologies:

GCP, Java, Micro Services, GitHub, Swagger, CI-CD, Terra Form, IBM API Connect, GKE, Docker Containers, BIAN, Cassandra, APIGEE and Service Mesh, AWS(EC2, S3, EKS, RDS, Lambda Function).

Description:

Lloyds Bank Open Banking is a financial initiative that embraces digital innovation to provide customers with enhanced financial services. Through Open Banking, Lloyds allows customers to securely share their financial data with authorized third-party providers, enabling a more interconnected and personalized banking experience. This initiative leverages Application Programming Interfaces (APIs) to facilitate seamless communication between Lloyds Bank and external financial applications, fostering the development of innovative financial products and services.

Customers can benefit from a broader range of financial insights, budgeting tools, and tailored offerings, as Open Banking enables the secure sharing of financial information between Lloyds Bank and trusted third-party applications. The initiative aligns with the broader industry trend towards increased transparency, competition, and customer empowerment in the financial sector. Lloyds Bank Open Banking aims to enhance customer experiences, promote financial inclusion, and foster a more dynamic and competitive financial ecosystem.

Responsibilities:

- **Architecture Governance:** Ensure adherence to architectural principles, standards, and best practices. Implement governance processes to maintain the integrity and consistency of the Open
- **BIAN:** Responsible for designing and deploying java-based BIAN microservices on GCP cloud infrastructure.
- Creating a database schema aligned with BIAN framework standard as a Data Architect.
- **System Maintenance:** Oversee day-to-day operations, promptly address issues, incidents, and service requests.
- **Security Management:** Collaborate on security measures, ensure compliance with regulatory requirements.
- **Continuous Improvement:** Identify opportunities for continuous improvement in the Open Banking solution.
- **Solution Design:** Translate business requirements into effective technical solutions within the Open Banking framework.
- **GCP Cloud Migration Plan:** Develop a concrete plan for migrating Open Banking services to Google Cloud Platform (GCP). This involves,
- Assessing current infrastructure, identifying dependencies, creating a migration roadmap, implementing the migration in phases, and ensuring minimal disruption to BAU operations. Addressing scalability, security, and performance, specific to GCP Cloud. Regularly review and refine the migration strategy to optimize resource utilization and take advantage of GCP services.

Project 2:

Time: July 2019 – Sept 2022

Company: Hyroot Cyber Technologies Private Limited

TITLE: CCDS – Cynergy Connect Data Services

Role: Technical Architect

Client: Cynergy Bank

TEAM SIZE: 60

ROLE: Software Developer

TECHNOLOGIES:

GCP, Java, WSO2, Spring JPA, Cloud SQL, PUB-SUB, Micro Services, Git Lab, Swagger, CI CD, Terra Form, Apache Storm, SolrCloud, Google Cloud Function, GKE, Skaffold, Maven Release tool, Docker Containers, MiniKube, APIGEE Edge, Apache Kafka and Service Mesh, AWS(EC2, S3, EKS, RDS, Lambda Function).

DESCRIPTION:

Cynergy bank is embarking on a banking transformation program with the principle of Human centric and experience led Service Design of customer & colleague journeys. The Cynergy Connect™ Banking Platform will be delivered iteratively through multiple transitions or Outcomes. Cynergy Connect technology stack conforms to a multi-layered model, with Integration Service Plane, Business Service Plane, Data Service Plane and Service Management Plane as the main building blocks. Data Services acts as the master plane of information, which is at the heart of a digital organization. Information feeds into the business services to create a single consistent view of both the customer and the organization. This brings together operational and analytical dimensions into a single consistent view of information.

RESPONSIBILITIES:

☐ Design and Develop Cloud-Native Microservices

- Develop scalable and secure Java-based microservices using Spring JPA, deployed on GKE (Google Kubernetes Engine).
- Ensure proper layering based on the platform's Integration, Business, and Data Service Planes.

☐ Cloud-Native Application Deployment

- Containerize services using Docker, and deploy via Minikube (for local) and GKE (for cloud).
- Use Skaffold for development-to-deployment automation and environment consistency.

☐ Event-Driven Architecture

- Integrate Google Cloud Pub/Sub for asynchronous messaging between microservices to ensure loose coupling and scalability.

☐ API Development and Management

- Design RESTful APIs and document them using Swagger/OpenAPI.
- Secure and manage APIs via Apigee Edge, applying authentication, rate limiting, and analytics.

☐ Service Mesh and Inter-Service Communication

- Implement secure, observable service-to-service communication using Istio-based Service Mesh for traffic control and policy enforcement.

☐ Database Design and Access

- Integrate Cloud SQL for persistent data storage; design schema and implement repositories using Spring JPA.

☐ CI/CD & Infrastructure as Code

- Implement and maintain CI/CD pipelines using GitLab CI/CD for automated builds and deployments.
- Manage infrastructure and GCP resources using Terraform to enable Infrastructure as Code (IaC).

☐ Security and Compliance

- Apply security best practices including encryption, identity federation, and secure API gateways.
- Conform to regulatory and data governance standards in the banking sector.

☐ Collaborate in Agile DevOps Environment

- Work closely with architects, testers, and product owners in an Agile environment to deliver business outcomes iteratively.

☐ Performance Monitoring and Optimization

- Instrument services for monitoring, tracing, and logging, aligning with GCP-native observability tools

and best practices.
