Mobile: +91- 8056258284

PROFILE

- **18+ years of experience delivering Banking Technology transformation across Corporate Banking, Payments, Treasury Operations, Cross-Border Payments support functions**, with expertise in ISO 20022, SWIFT CBPR+, CHIPS, Fedwire, payment modernization, and enterprise banking platforms.
- Started my career as Java Developer and currently working as Technical Project Manager.
- Hands on experience in design, analysis, development, project management, agile working experience with **Java, Spring Framework, Hibernate, Spring Boot, Micro service, Angular, Cloud Technologies AWS, Full Stack Development, Sitecore and Content Management (CMS) Technologies** on web application design, development and production support for Java EE based Framework.
- Support and coordinate with presale and Technology team on define **SOWs**.
- Experienced in Waterfall and Agile Methodologies Scrum, Safe, Kanban and tools JIRA, ADO, Rally.
- Experience in Project Management, **Stakeholder Management, Planning, Estimation, Budgeting, Risk management, Operation Management, Scope, Schedule, Cost, Quality, Incident Management, Problem Management and Delivery Management**.
- Experience in end-to-end bottom-line responsibility in Project Lifecycles on **development & maintenance projects, Production Support and quality processes**.
- Hands-on experience in building Microservices & REST APIs using Java, and other related technologies.
- Worked closely with Business Team and other key stakeholders to find techniques for effective **Goal definition, Backlog Management, and prioritizing the requirement**.
- knowledge of architecture frameworks, and design principles, ability to comprehend & manage technology, performance engineering.
- Experienced in Devops process Continuous Integration (**CI**), Continuous Delivery/Deployment (**CD**) and Infrastructure monitoring.
- Experienced in **project charter SOW, Project Planning, RACI matrix, RAID Logs** development and Management.
- Experienced in Content Management technologies like **TeamSite, Documentum** and CRM Technology **Salesforce**.
- Manage ITIL/ISO 20000 support processes, Service level Management, **Problem Management, Change Management, Release Management, Incident Management and Configuration Management**. Analyzed and recommended improvements to all new systems and ITIL processes.
- Hands on experience with **SQL** programming and Transact-SQL in creating tables, Stored Procedures, triggers, user-defined functions, views, indexes, user profiles, relational database models.
- Experienced in documentation, providing training to fresh recruits and also participated actively in review meetings.
- Actively participated in team building and involved in many operations for maintaining healthy work environment.
- Excellent Communication and interpersonal skills.

TECHNICAL SKILLS:

Languages	Java, JDK 11, JavaScript, XML, JSON
Backend Technologies	Full Stack, JSP, Servlets, Spring, Hibernate, JDBC, Struts, Content Management System –TeamSite, Documentum, Ecommerce, Spring Boot, Microservice, AWS, Azure DevOps, Restful Webservice, Salesforce Admin, Angular, DevOps, Sitecore, .Net and PowerBI

Development Methodologies	Waterfall, Agile Scrum, Safe and Kanban
FrontEnd Technologies	HTML, CSS, Java Script, Angular
Project Management	Scope, Schedule, Stakeholders, Estimation, Budgeting, Cost, Vendors, Risk, Quality and Planning
Tools & Utilities	Microsoft Project Plan(MPP),JIRA,ADO,Rally,Mural,TOAD,Putty,ServiceNow, MS Visio, Confluence, Monday.com, Clarity, Jenkins, uDeploy, uBuild, GitHub
Databases	Oracle, SQL, Cassandra, DB2
Cloud Technologies	AWS
Operating Systems	Windows 95/98/NT/4.0/2000/ XP, windows 7.

Work Experience

- Working as Project Manager in MNC from Dec 2024 to till date.
- Worked as Project Manager in Softura Technologies from Oct 2023 to Aug 2024.
- Worked as Project Manager in Incedo Technology Solutions Limited from March 2022 to Oct 2023.
- Worked as Project Manager in Infosys Limited from Jan 2018 to March 2022.
- Worked as Technology Lead in Infosys Limited from August 2008 to Dec 2017.
- Worked as Software Engineer in HCL Technologies from May 2007 to Aug 2008.

EDUCATION:

- Master of Computer Application (MCA) from Nehru Memorial College, Trichy.

SPECIALISATION:

- Completed PMP Certification. PMP Number: 3347034
- Completed Scrum Master (CSM) Certification. Certificant ID: 000679421

USA Visa:

- Have a valid USA H1B Visa till Sep 2026.

Onsite Experience:

Onsite Experience in Mexico from Oct 2012 to Oct 2013.

PROFESSIONAL EXPERIENCE:

Client: Leading American Bank

Dec 2024 – Jul 2026

Role: Project Manager

This is a multiphase initiative aimed at enhancing the performance of API calls and reduced load on corecard while fetching the Transaction History. Resolve high priority production issues to crash due to overload of Transaction API calls to core card.

Responsibilities:

- Developed the project plan and managing project as per project plan within schedule, budget and quality.
- Involved in Code Review and Providing the Solutions and Comments.
- Interacted with multiple stakeholders, accountable for planning, defining and managing the scope, schedule, cost and quality of projects.

- Responsible for identifying risks involved in a project and develop mitigation and contingency plan.
- Involved in all the project management activities includes estimation, budgeting, allocation, Order Management System, Invoicing and risk handling.
- Organized and involved in sprint planning, daily stand-up meetings, reviews, retrospectives, demos and other scrum-related meetings.
- Guide and coach multiple scrum teams and organize agile and scrum practices and values while also meeting delivery commitments.
- Work closely with product owners to ensure understanding of user stories and keeping the backlog groomed.
- Handled AWS infra issues and initiatives as well.
- Supported payment modernization for **institutional banking and treasury payment flows** across SWIFT CBPR+, CHIPS, and Fedwire.
- Worked with **Treasury, Liquidity, Global Payments, and Settlement Operations** teams during ISO 20022 transformation.
- Participated in impact assessment of payment changes on downstream settlement and reconciliation processes.
- Coordinated end-to-end testing of high-value payment flows supporting institutional banking operations.
- Worked with operations teams to ensure regulatory compliance and straight-through processing (STP) for cross-border payments.
- Identify risks in the project and manage stakeholders outside the team as required.
- Created dashboards to track and measure the metrics.
- Developed, documented, and implemented a standardized process to measure key performance metrics across multiple facilities.
- Preparing Weekly Status Report and Monthly Governance Report .

Technologies: Java, Spring Boot, Microservice, Project Management, SQL, Agile Safe, JIRA and Confluence.

Product: OTAP
Client: Cummins
Organization: Softura

Oct 2023 - Aug 2024
Role: Project Manager

System should understand which ECM architecture a registered engines's Engine Control Module has Core2 or CSAR. This will enable implicit Registration to populate the appropriate ECM Architecture value when a new engine and ECM are registered. Also, capability API should provide specific enough reason codes for partners to understand the reason for capability failure and it support specific reason codes for 443 scenarios.

Responsibilities:

- Work on product strategy/definition, vendor management, and feature deployment for OTAP product.
- Analyzing supply chain data and SCM Vendor Management and performance.
- Developed and implemented project roadmaps and milestones, led key stakeholder engagement and accountability, and communicated project status with relevant stakeholders.
- Developing Restful APIs to interact the services.
- Worked closely with cross-functional teams to deliver key project goals.
- Experienced in AWS Services (Lambda, S3, DynamoDB, and IAM).
- Ensure projects align with organizational security goals and comply with Identity and Access Management (IAM) standards.
- Experienced in Microsoft project plan (MPP) tool for all the project management activities includes estimation, budgeting, allocation, scheduling, Invoicing and risk handling.
- Maintain thorough project documentation, including project charters, status reports, and post-project evaluations.
- Develop a comprehensive change management plan, outlining the scope, impact, resources, and stakeholders involved.

- Align the change strategy with business goals and ensure organizational readiness.
- Ensuring Agile practices are aligned with the SAFe framework to enable enterprise-level delivery.
- Coaching teams on Agile principles and helping them implement SAFe practices.
- Ensuring continuous improvement and fostering a Lean-Agile mindset across the organization.
- Mentored Salesforce admins with Salesforce configuration, schema, custom objects, and workflows.
- Prepared Weekly Status Report and Monthly Governance Report .
- Manage and maintain the Salesforce platform, including user setup, profiles and roles, customization of objects, fields, record types, page layouts, and validations.
- Ensure compliance with organizational policies, security, procedures, and regulatory requirements related to Salesforce.
- Develop and maintain custom reports and dashboards to provide actionable insights to stakeholders.
- A good understanding of Salesforce's capabilities, including Sales.
- Proficiency in configuring Salesforce, hands-on building custom applications.
- Hands-on technology experience enabling customer relationship management capabilities with deep techno/functional and solution implementation experience in a CRM platform such as Salesforce.

Technologies: Java, Spring, Spring Boot, Microservice, AWS, Angular, Agile Safe, JIRA, Project Management.

Client: CITI Bank, USA

Project: ISO 20022 Implementation for CBPR+ in Volpay

Organization: Incedo

Mar 2022 - Oct 2023

Role: Project Manager

This project involved the transformation of payment processing systems to comply with the ISO 20022 messaging standards across SWIFT CBPR+, CHIPS, and Fedwire. The goal was to upgrade the existing ACI Money Transfer System (MTS) to handle ISO 20022 messages and ensure alignment with the upcoming FedWire changes. The project included the implementation and integration of ISO 20022 standards, ensuring consistent and efficient processing of payment messages, credit transfers, direct debits, and liquidity management.

Responsibilities:

- Developed comprehensive project plans that included schedules, budgets, and resource allocations, ensuring alignment with enterprise project portfolios and critical milestones.
- Managed all phases of the project lifecycle, from Initiation, planning through execution, Monitoring and closeout, demonstrating a strategic and tactical approach in a matrixed environment.
- Led cross-functional teams and vendors ensuring successful delivery of enterprise-wide programs and projects while adhering to quality benchmarks and timelines.
- Identified potential risks throughout the project lifecycle and developed robust mitigation strategies, monitoring risk status and adjusting project plans accordingly.
- Led the design, development, and implementation of the payment processing architecture for SWIFT CBPR+, CHIPS, and Fedwire, ensuring full compliance with ISO 20022 standards.
- Worked extensively with ACI Money Transfer System (MTS), with deep technical and functional knowledge of MCAS, ICE, and Control Center components. Managed the deployment and testing of patches, including both Service Pack style and hot fixes in ACI MTS.
- Hands-on experience with the data model for the ACI MTS Unified Payment Framework (UPF) and core MTS data models to ensure smooth operations and compliance with ISO 20022 standards for payments.
- Collaborated with cross-functional teams to facilitate the migration and upgrading of the ACI MTS platform in alignment with upcoming Fedwire changes, set to go live.
- Implemented shell scripts to automate critical processes in system deployment, operations, and monitoring for ACI MTS.

- Integrated Kafka as part of the messaging framework, ensuring reliable and efficient message queuing for SWIFT CBPR+, CHIPS, and FedWire transactions.
- Designed, validated, and processed payment messages using XML and XSDs, adhering to international standards for financial transactions.
- Developed RESTful APIs to facilitate service interactions, demonstrating technical competency in integrating systems.
- Led payment modernization initiatives supporting **Corporate & Investment Banking** payment flows across SWIFT CBPR+, CHIPS, and Fedwire.
- Worked with Treasury Operations, Liquidity Management, and Global Payments teams to deliver regulatory-driven payment transformation.
- Coordinated with Capital Markets operations for settlement and payment message processing aligned with ISO 20022 standards.
- Managed integration of payment gateways supporting high-value cross-border settlement and treasury payment processing.
- Collaborated with operations, compliance, and technology teams supporting institutional banking payment infrastructure.
- Supported migration of international payment messaging to ISO 20022 for global banking operations.
- Ensured projects aligned with organizational security goals and complied with Identity and Access Management (IAM) standards.
- Experienced in AWS Services (Lambda, S3, DynamoDB, SNS, SQS, Beanstalk and IAM) and cloud migration.
- Maintained thorough project documentation, including project charters, status reports, and post-project evaluations to ensure transparency and knowledge sharing.
- Managed high-severity incidents, tracking root causes and resolutions to minimize impact on project timelines and quality.
- Play an essential role in Program Increment (PI) Planning by collaborating with Release Train Engineers, and team members during planning events.
- Responsible to conduct Scrum ceremonies, including sprint planning, daily stand-ups, reviews, retrospectives, and demos, effectively guiding and coaching multiple Scrum teams.
- Develop a comprehensive change management plan, outlining the scope, impact, resources, and stakeholders involved.
- Prepared Weekly Status Report and Monthly Governance Report .

Technologies: Java, Spring, Spring Boot, Microservice, AWS, Kafka, Angular, Agile Safe, JIRA, Project Management.

Project: Production Support

Feb 2020 – Mar 2022

Client: Leading Health Insurance provider for state of New Jersey.

Role: Project Manager

Organization: Infosys

This project aims to enhance the support for managing production problems, issues, and incidents within our organization. It focuses on establishing streamlined processes, effective communication channels, and robust documentation to minimize downtime, improve response times, and ensure the stability of production environments.

Responsibilities:

- Identifies root causes of reoccurring problems and incidents and implements solutions
- Proactively monitor the operations of the production system and help in resolving any live problems detected/reported.
- Production batch support, which includes monitoring batch on a rotational basis, user support, on-

call support, job failure analysis, Unix system and process management.

- Perform various code rollouts to implement the changes done by the development team.
- Review the production support issues assigned and do due diligence - troubleshooting, root-cause analysis and provide resolution in a timely manner.
- Managing the team for ticketing system, monitoring and maintaining multiple applications in development, QA, staging, and production environments.
- Manage the incident process to ensure issues are recorded, tracked, resolved, and follow ups are done in a timely manner.
- Regularly updating the app to fix bugs, implement new features, and adapt to changes in Android OS.
- Applied CI/CD practices to ensure smooth and efficient development and deployment processes.
- Take ownership of issue reported by the customer and ensure that it is resolved quickly effectively or escalated to the next level with relevant data as needed in a timely manner.
- Set the right expectations with the customer and keep communication flowing at appropriate intervals.
- Involved in requirements analysis, planning estimation work allocation, tracking of progress against schedule, coordination with the customer, quality management, configuration management.
- Identifying and implementing automation opportunities to ensure success.
- Develop a standardized approach for logging, categorizing, and prioritizing incidents to ensure timely resolution.
- Implement processes to identify root causes of recurring issues and facilitate permanent solutions.
- Create a centralized system for tracking all production issues to enhance visibility and accountability.

Technologies: Java, Spring, Spring Boot, Microservice, SQL, Project Management and ServiceNow

Project: Recruitment
Client: Walmart, USA
Organization: Infosys

Apr 2018 – Jan 2020
Role: Project Manager

Recruitment System comprises of a host of applications which are mainly used to hire applicants and transfer them to various job codes and postings as and when the need arises. It has support online hiring center, Online Assessment and Career Preference.

Responsibilities:

- Developed the project plan and managing project as per project plan within schedule, budget and quality.
- Involved in Code Review and Providing the Solutions and Comments.
- Interacted with multiple stakeholders, accountable for planning, defining and managing the scope, schedule, cost and quality of projects.
- Responsible for identifying risks involved in a project and develop mitigation and contingency plan.
- Involved in all the project management activities includes estimation, budgeting, allocation, Order Management System, Invoicing and risk handling.
- Organized and involved in sprint planning, daily stand-up meetings, reviews, retrospectives, demos and other scrum-related meetings.
- Guide and coach multiple scrum teams and organize agile and scrum practices and values while also meeting delivery commitments.
- Work closely with product owners to ensure understanding of user stories and keeping the backlog groomed.
- Facilitate the team to estimate story points and measure velocity to plan future sprints.
- Extract the data from Azure Devops (ADO), analyze and automate the data through Power BI.
- Conducted Validations and Audits for a project on agile implementation.
- Identify risks in the project and manage stakeholders outside the team as required.

- Created dashboards to track and measure the metrics.
- Developed, documented, and implemented a standardized process to measure key performance metrics across multiple facilities.
- Implement and customize Sitecore CMS solutions based on project requirements.
- Develop custom components, templates, and layouts using Sitecore.

Technologies: Java, Spring, Angular, Spring Boot, Microservice, Sitecore, Project Management, SQL, Agile Safe, ADO and PowerBI.

Project: IVR, USA
Client: Verizon
Organization: Infosys

Dec 2014– Mar 2018
Role: Project Manager

The overall objective of this project is for supplier to provide services to create and execute migration of VZW IVR applications as per the road-map with primary focus on prepay and postpay with all of its functionality including common modules.

Responsibilities:

- Involved on FRD walkthrough call, prepare project plan and work with multiple teams to make sure release moves smoothly to Production. Managing project as per project plan within schedule, budget and quality.
- Involved in Code Review and Providing Suggestions and Comments.
- Involved in design specification requirements and creation of task level documents.
- Work very closely with team members to make sure that the piece of the complex system work well with the other dependent systems.
- Manage day-to-day relationships with client and internal stakeholders and resolution of all issues.
- Interacted with multiple stakeholders, accountable for planning, defining and managing the scope, schedule, cost and quality of projects.
- Responsible for identifying risks involved in a project and developing mitigation and contingency plan.
- Involved in all the project management activities includes estimation, budgeting, allocation, Order Management System, Invoicing and risk handling.
- Organized and facilitated sprint planning, daily stand-up meetings, reviews, retrospectives, demos and other scrum-related meetings.
- Guide and coach multiple scrum teams and organize agile and scrum practices and values while also meeting delivery commitments.
- Work closely with product owners to ensure understanding of user stories and keeping the backlog groomed.
- Facilitate the team to estimate story points and measure velocity to plan future sprints.

Technologies: Java, J2ee, Spring, Spring Boot, Microservice, Project Management, SQL, Agile Scrum and Rally.

Project: P2P (Person to Person) Transfer
Client: Bank of America, USA
Organization: Infosys

Jan 2013 – Nov 2014
Role: Technology Lead

P2P Gen2 is an extension of the current Bank of America P2P product offering, enabling customers to send P2P payments to anyone using an alias vs their routing and account number, regardless of whether they currently have an account with BAC or another Financial Institution. If the receiving party does not have an account with either FI on the network, the customer would have to open an account with either FI to collect funds. Enhance existing P2P functionality to allow for closed loop network transfers between Bank of America and another financial institution.

Responsibilities:

- Participated in requirement gathering, estimation, and planning discussions.
- Collaborated on analysis, design, development, testing, implementation, and support activities.

- Engaged in system architecture design.
- Adhered to agile methodology for system development and maintenance.
- Played an active role throughout the entire project life cycle, from requirements to production.
- Research and evaluate software related technologies and applications.
- Design and develop testing and maintenance procedures and activities.
- Develop and write high quality coding that meets customer requirements.
- Create software documentation and update existing documentation.
- Design, develop and implement critical applications in a Java environment.
- Assist and support other team members on multiple projects.
- Involved in Metrics and Milestone preparation for evaluation effort deviations.
- Delivered payment solutions integrated with enterprise banking platforms supporting institutional payment processing.
- Worked with payment processing and settlement workflows across retail and commercial banking channels.
- Collaborated with banking operations and technology teams to enhance payment execution and reconciliation.

Technologies: Java, J2ee, Struts, Spring, Hibernate, Toad, CMS - Teamsite and Oracle.

VIPAA (Verify IP Access Authority) for Credit Card

Client: Bank of America, USA

Organization: Infosys

Nov 2009 – Dec 2012

Role: Technology Lead

This project is on implementing the ecommerce banking Sites for credit cards in the web and Content Management. This application supports Common Web Authentication flows. It includes existing sign-on flows with Site Key validation/Enrollment/Maintenance. Application performs Login into OLB and Authenticated Space.

Responsibilities:

- Directed the design and development of enterprise applications within the J2EE environment.
- Maintained application software by analyzing bottlenecks, fixing bugs, and enhancing existing system functionality.
- Led the integration of payment gateways for secure and efficient credit card processing across platforms.
- Collaborated with the development team to implement security protocols and real-time monitoring for detecting and preventing fraudulent credit card transactions.
- Ensure software systems are fully compliant with Payment Card Industry Data Security Standards (PCI DSS) for securely handling and storing cardholder data.
- Oversee systems that manage end-to-end credit card transactions, including authorization, capture, settlement, and refunds.
- Designed and maintained robust encryption mechanisms to secure credit card data both in transit and at rest.
- Identified and mitigated risks related to credit card processing, including chargebacks, disputes, and payment failures.
- Worked on improving the checkout and payment experience, reducing transaction friction, and ensuring a smooth, user-friendly process for credit card payments.
- Analyzed transaction data, providing insights into payment trends, performance, and issues, to inform decision-making.
- Developed for managing credit card disputes and chargebacks, minimizing loss for the company.

Technologies: Java, J2ee, Spring, Hibernate, Toad, Waterfall, Rally, Oracle, CMS-TeamSite. ServiceNow

Project: TRIP (Transaction Related Information Provision)

Client: RBS, Netherland

Organization: Infosys

Aug 2008– Oct 2009

Role: Technology Lead

It is banking software and it's processing of banking operations. This dynamic and versatile software is designed to cover accessing account information. Various modules are handled in this software for the convenience of users. The web application is running under Websphere Application Server. TRIP provides accessing the Account information from the TRIP Database, henceforth it's called the TRIP Account Information Service. It's accessing the data for Beneficiary and Customer Account for TRIP.

Responsibilities:

- Involved in Design, Development and Testing of this web based J2EE project with Java based Architecture.
- Used RAD 7 as an IDE for application development.
- Extensively worked on Installation and Maintenance of the WebSphere 6.0. Performed Unit Testing using JUnit.
- Wrote named queries using hibernate to get the data to/from persistence store.
- Managing various database maintenance tasks such as statistics, Index, checkdb and Backup.
- Performing database restores to non-production environment.
- Supported banking operations involving customer account servicing, beneficiary management, and transaction processing.
- Participated in initiatives supporting payment processing and banking information services for institutional clients.

Technologies: Java 1.5, JSP1.2, JavaScript, Servlet 2.2, JDBC, XML, SQL, RAD 7, JUnit, Hibernate and Spring.

Project: MIS (MANAGEMENT INFORMATION SYSTEM)

May 2007 - Aug 2008

Client: Standard Chartered

Role: Software Engineer

Organization: HCL Technologies

The Purpose of this project is enhancement of Account Opening Process. The scope of this project is development of various reports in Frontline, Data Entry and Reviewer. This report provides various kinds of information to account opening forms.

Responsibilities:

- Java server pages and struts controller Servlets wrote for front end system.
- The screen has been developed using struts tag with JSP.
- Involved in Preparation of Prototyping, High Level Design and Low-Level Design Document.
- DAO wrote for persistence store.
- Wrote named queries using hibernate to get the data to/from persistence store.
- Performed Unit Testing and involved in End-to-End testing using JUnit.
- Delivered enhancements for retail and commercial banking applications supporting customer onboarding and operational workflows.
- Worked with banking operations and compliance teams to improve account servicing processes.

Technologies: Java 1.5, JSP1.2, JavaScript, Servlet 2.2, JDBC, XML, SQL, RAD 6, Hibernate and Struts.
