Summary

- Backend Developer with **4 years of hands-on experience** building scalable, secure, and high-performance applications using [Node.js](#), [React Js](#), Express, and modern JavaScript/TypeScript practices.
- Proven expertise in **architecting RESTful APIs**, designing data models, and integrating complex business workflows across domains like healthcare, logistics, billing, and subscription platforms.
- Strong background in **legacy system modernization**, refactoring decade-old codebases, and rapidly adapting to existing architectures to deliver new features efficiently.
- Experienced in **database optimization**, including query tuning, indexing strategies, and improving application performance for high-transaction systems.
- Demonstrated ability to **own projects end-to-end**, from requirement analysis and architecture planning to development, QA, deployment, and production-level support.
- Highly collaborative, proactive problem solver with excellent communication skills, known for delivering projects under tight deadlines while maintaining code quality and system reliability.

Skills & Technologies

Category	Skills
Languages	Node Js, React Js, HTML, CSS
Frameworks	Express, Nest Js
Databases	MySQL, MongoDB, NoSQL
Tools	Git, Docker, AWS
Other	Agile, Scrum
Soft Skills	Team Management, Proactive, Prioritization, Cross-functional Collaboration, Leadership, Conflict Resolution, Adaptability, Critical Thinking, Work Ethic

Professional Experience

Logistics - Dr. Lal PathLabs :

- Contributed to building **Logistics Management System** for handling transportation of blood samples, cash collections, and other critical medical items across network routes.
- Support with Frontend activities.
- Optimized several **performance-heavy queries**, reducing response times and improving system stability for high-volume logistics operations.
- Designed and implemented a **Communication Engine Service** to streamline communication between field staff, transport units, and internal systems.
- Improved backend reliability by refactoring legacy modules, optimizing database indexing, and restructuring API logic for better scalability.
- Collaborated closely with logistics teams to understand ground-level workflows and translate them into efficient backend processes and automated flows.
- Ensured secure data handling and compliance with medical and operational requirements during the transportation and tracking of sensitive items.

Dr. Lal PathLabs :

- Single-handedly developed a **new premium brand platform** for Dr. Lal PathLabs, delivering a modern and scalable experience for high-value users.
- Quickly analyzed and understood a **7-year-old legacy codebase**, refactoring critical parts to improve performance, stability, and compatibility with new features.
- Implemented new backend modules for **doctor consultation, diet consultation, questionnaires, and service-wise test completion**, enhancing user engagement and service personalization.
- Built robust, extensible **REST APIs** to integrate premium features with existing systems while maintaining backward compatibility with the legacy architecture.
- Collaborated closely with product and operations teams, providing continuous support and ensuring rapid, high-quality delivery within a tight timeline.
- Demonstrated strong ownership by handling requirement analysis, development, testing, optimization, and deployment with minimal supervision.

Billing Management System :

- Single-handedly architected and developed a full **Billing Management System** using **KeystoneJS**, covering employees, projects, billing cycles, and reporting workflows.
- Designed and implemented **RESTful APIs** using Keystone's schema and relationship model, enabling fast, reliable, and scalable data interactions.
- Leveraged KeystoneJS's advanced **relationship management** to build complex data structures—supporting project allocations, employee billing, and multi-level approval flows.
- Optimized data retrieval through Keystone's built-in query features, ensuring efficient filtering, pagination, and aggregation for large datasets.
- Built secure authentication and role-based access control to streamline operations for admins, managers, and employees.
- Delivered the entire solution end-to-end—including database modeling, API architecture, business logic, testing, deployment, and maintenance.

Home Title Lock :

- Led **end-to-end data migration**, designing secure migration scripts in Node.js and ensuring high data integrity for US land-title protection records.
- Built **reusable, modular backend components** to streamline API development, reduce code duplication, and improve maintainability across the platform.
- Implemented **payment gateway integrations** (e.g., subscriptions, refunds, upgrades/downgrades) with robust error handling and idempotent transaction workflows.
- Developed and optimized **subscription management services**, including automated billing logic, plan changes, renewal flows, and customer lifecycle updates.
- Enhanced **security measures** for user identity, subscription data, and land-registration information to help protect US homeowners from title-related fraud.
- Collaborated with cross-functional teams to improve system reliability, introduce logging/monitoring, and support deployment of new features in production.

Value to the Organization:

- Consistently deliver end-to-end backend solutions—reducing development time, improving system performance, and enabling faster release cycles.
- Modernize and optimize legacy systems, improving reliability, scalability, and long-term maintainability across critical healthcare and logistics platforms.
- Build clean, reusable APIs and optimized data workflows that lower operational costs and enhance user experience for both internal teams and end customers.
