

RAHUL SHUKLA

Technical Lead | Engineering Manager | Python, FastAPI, React/Next.js, AWS & GCP

Lucknow, India 226002 | adishukla4396@gmail.com | 8917738856 | linkedin.com/in/adishukla96 | Available to Join Immediately

EXECUTIVE SUMMARY

Technical Lead and Senior Software Engineer with 9+ years designing and shipping cloud-native platforms, event-driven services, and AI-enabled applications across fintech, media, and enterprise SaaS. Hands-on expertise across the full stack — Python, FastAPI, React/Next.js, PostgreSQL/MySQL/NoSQL, and AWS/GCP/Azure — with production experience integrating payment, KYC, and LLM/agentic services for organizations including Wipro (JioHotstar), Kays Harbor (fintech/BNPL), and Ekvinti. Proven record leading engineering teams of up to 8, owning architecture from design through production, and coordinating delivery with cross-functional and client stakeholders.

CORE COMPETENCIES

Engineering Leadership & Team Ownership • System Design & Microservices Architecture • Full-Stack Delivery (React, Next.js, Node.js, Python, FastAPI) • Cloud-Native Development (AWS, GCP, Azure) • Payment & KYC Integrations • AI/LLM Integration & Automation • CI/CD & Infrastructure as Code • Cross-Functional & Client Stakeholder Coordination

TECHNICAL SKILLS

Languages & Frameworks: Python, FastAPI, JavaScript/TypeScript, Node.js, React, Next.js

Cloud & Infrastructure: AWS, GCP, Azure (App Services), Docker, Terraform, Nginx, CI/CD (Bitbucket)

Data & Messaging: PostgreSQL, MySQL, MongoDB, Redis

Payments & Identity: Payment gateway integrations, DigiLocker API, virtual KYC flows, Auth0, DriveWealth, Unit API

AI & LLM Integrations: OpenAI, Claude, LlamaIndex, ElevenLabs, Hedra, Sarvam AI

Architecture & APIs: REST APIs, Microservices, System Design, IBM CPLEX (optimization)

Agentic & MCP Tooling: FastMCP (server & API integration), tool-calling agents, Gemini

Delivery & Coordination: Agile/Scrum (sprint planning, standups, retrospectives), JIRA, Confluence, cross-team & stakeholder coordination

PROFESSIONAL EXPERIENCE

Technical Lead | Ekvinti Technologies Pvt Ltd — Mumbai, India

06/2025 – Present

Tech Stack: React, Node.js (Express), Python (FastAPI), MySQL, Azure, Docker, Terraform

- Architected and led end-to-end development of TrustVid, an AI-powered personalized video generation platform, integrating ElevenLabs, Hedra, Sarvam AI, and WhatsApp APIs into a unified production pipeline.
- Led architecture planning and day-to-day technical direction for a team of 6 developers as Technical Lead, translating product requirements into execution plans.
- Stepped up to own full architecture and technical direction for the platform following the departure of the prior senior Tech Lead, absorbing broader technical accountability across the team.
- Designed a multi-stage rendering architecture (script → audio → video → delivery) using FFmpeg and Remotion, engineering cost-optimized processing for high-volume media generation.
- Built a credit-based monetization and usage-tracking system aligned to third-party API consumption, enabling accurate cost attribution and scalable pricing.
- Owned Azure cloud infrastructure end-to-end — Terraform-based IaC, Bitbucket CI/CD pipelines, and Azure App Service deployments — establishing repeatable, automated release processes.
- Built a Design Agent integrating FastMCP server calls with Gemini to interpret natural-language prompts and translate them into structured JSON architecture updates applied live to editor timeline elements.

Sr. Software Engineer | Wipro Ltd (JioHotstar) — Mumbai, India

03/2022 – 06/2025

Tech Stack: Node.js, React, Python (Flask, FastAPI), MongoDB, Docker, on-premises + AWS infrastructure

- Led a team of 8 developers within the JioHotstar BPE (Business Process Engineering) wing, owning end-to-end delivery of six enterprise portals — Expense Management, Banquet Booking, Invoice Management, Employee Safety, and Employee Tracking — all built on a Python/React stack with MongoDB as the primary data layer, from architecture through production support.
- Acted as primary technical point of contact for JioHotstar stakeholders and coordinated sprint planning, task allocation, and cross-team dependencies with the Data Science wing.

- Designed and built an MST Optimization platform pairing a Python/React stack with IBM CPLEX solvers to automate complex scheduling and resource-allocation decisions.
- Containerized all services using Docker and managed hybrid AWS + on-prem infrastructure, optimizing EC2, load balancers, and Nginx configuration for reliability.

Software Engineer | Kays Harbor Technologies Pvt Ltd — Chandigarh, India

06/2021 – 04/2022

Tech Stack: React, Node.js, Docker, AWS

- Delivered full-stack solutions and architecture for an enterprise fintech client, continuing the same engagement after being retained directly by the client; later promoted for strong performance across two concurrent engagements.
- Frontend Lead on Snapmint, a Buy-Now-Pay-Later checkout platform: owned frontend integration of the flash checkout widget embedded on partner merchant sites (including boAt and Firebolt), engineering a single-click render flow that loaded live checkout state, KYC status, and financing terms in one call — with only one attempt to get the production render right.
- Developed and containerized Flask-based microservices on AWS powering SavingsOak, an HSA (Health Savings Account) platform; built core integrations with DriveWealth, Unit API, Auth0, and payment gateways, and designed User, Admin, and Employer dashboards on a Next.js frontend.
- Automated event-driven workflows using EventBridge, SQS, and Lambda, reducing processing latency by 30%.

Software Engineer | True Tech Professionals Pvt Ltd — Panchkula, India

03/2021 – 06/2021

Tech Stack: Node.js, React

- Initial contracting entity for the same fintech client engagement continued above; when True Tech Professionals dissolved shortly after the engagement began, was retained directly by the client (Kays Harbor Technologies) for full-time continuation of the same project.

Software Engineer | Laitkor Info Solutions Pvt Ltd — Lucknow, India

05/2020 – 03/2021

Tech Stack: PHP

- Engaged initially on a ~4-month hourly contract basis before transitioning to a full-time position in July 2020.
- Architected end-to-end product solutions for non-profit service-management platforms, leading HubSpot and third-party API integrations to extend functionality.
- Delivered custom enterprise web applications for non-profit and service-management clients, collaborating cross-functionally to meet delivery timelines and functional requirements.

Team Lead | Path Coders Pvt Ltd — Mohali, India

07/2019 – 01/2020

Tech Stack: Python, React

- Led team operations and development of JavaScript-based applications (React, Gatsby, Angular), delivering product solutions and REST services.
- Gained hands-on experience with AWS Lambda and CloudWatch alongside Python/Flask backend development.

Web Developer | OurDesignz — Mohali, India

08/2017 – 06/2019

Tech Stack: PHP, JavaScript, jQuery

- Began career as a Software Engineering Intern before converting to a full-time Web Developer role; built a real estate web platform for the Dubai market using CodeIgniter (PHP).
- Researched and developed Chrome/Mozilla browser extensions using web-scraping tools (Knime, Octoparse, Selenium, Scrapy) for automated data extraction.

EDUCATION

Bachelor of Engineering, Computer Science — Rabindranath Tagore University, Raisen, MP | 08/2017
