Tools- SQL Querying, Advanced Excel, Power BI, Excel, Python, ServiceNow, Salesforce.

Business & Delivery: Requirement Gathering, Requirements Documentation, BRD, FRD, User Stories, Process Analysis, UAT/SIT, Stakeholder Management, Data-driven Decision Making.

WORK EXPERIENCE

Business Data Analyst ,Teleperformance, UK

Mar 2024 – Mar 2026

- Reduced operational processing delays by 20% by performing root-cause analysis of post-implementation issues and identifying legacy and closed-account data bottlenecks.
- Led 500+ client onboarding and implementation engagements by gathering cross-functional requirements and translating technology, operations, and compliance needs into BRDs, FRDs, and user stories.
- Improved visibility into onboarding and operational performance by 67% by developing SQL, Excel, and Power BI dashboards tracking KPIs, SLA compliance, and onboarding trends for executive reporting.
- Identified regional sales and conversion performance gaps by analysing lead flow, customer financing preferences, and product uptake for VWFS enabling data-driven improvements to sales and marketing performance.

Assistant Manager, Eden South, UK

Mar 2022 – Feb 2024

- Increased customer retention by 40% by analysing customer feedback, sales, inventory, and operational data to identify service gaps and recurring customer churn patterns.
- Improved operational performance by 80% through KPI trend and recurring-issue analysis, enabling management to identify operational bottlenecks and implement targeted process improvements.
- Reduced recurring service issues to 20% by applying root-cause analysis to operational performance trends and translating data-driven findings into targeted process improvements.

Systems Engineer, Infosys Ltd, India

Jan 2021 – Jan 2022

- Reduced manual incident-logging time by 30%, from 40 to 28 minutes, by automating repetitive production-support workflows using PowerShell and ServiceNow.

- Improved production issue resolution by 45% by troubleshooting API integrations and backend database issues while coordinating ServiceNow incidents across cross-functional technical teams.

PROJECTS

Customer insight platform- Lloyds

SQL | Power BI | SharePoint | Data Analysis | KPI Analysis

- Reduced recurring customer-service issue volume by 20% by integrating customer data using SQL, Power BI and SharePoint to identify recurring pain points, service trends and process gaps.
- Improved process performance visibility by converting customer and operational data into KPI-driven insights, enabling targeted recommendations to address recurring service issues.

Marketing performance suite- VWFS

SQL | Power BI | Business Analytics | KPI Analysis

- Identified regional conversion and lead-handover performance gaps by analysing lead flow and customer-to-sales journey data, enabling targeted improvements to sales handover strategies.
- Improved sales decision-making by analysing customer financing preferences and regional conversion trends to identify underperforming segments and performance opportunities.

Cloud Automation Suite- infosys

SQL | ServiceNow | Mainframes | Incident Management

- Reduced manual incident-logging time by 30%, from 40 to 28 minutes, by automating repetitive production-support workflows using PowerShell and ServiceNow.
