## Senior Data Engineer

☎ +91 9040267580 # [kat.renu2803@gmail.com](mailto:kat.renu2803@gmail.com) | [linkedin.com/in/renuka001](https://www.linkedin.com/in/renuka001)

---

### Professional Summary

---

Senior Data Engineer with 9 years of IT experience, including 6 years in Big Data engineering and 3 years in Mainframe development. Expert in designing scalable data pipelines using PySpark, Spark, Scala, Hive, and Microsoft Fabric. Strong experience in BFSI and Energy domains, delivering regulatory-compliant, high-volume data solutions using Azure cloud technologies.

### Core Skills

---

**Cloud and Data Storage:** Microsoft Fabric, Azure, ADLS, Azure Data Factory

**Big Data Technologies:** PySpark, Apache Spark, Scala, Hive, Hadoop

**Architectures and Processes:** Lakehouse Architecture, Medallion Architecture, ETL/ELT

**Orchestration and CI/CD:** Airflow, Oozie, Jenkins, Kaniko, Git

**Other:** Azure Service Bus, BFSI, Energy Analytics, Data Quality

### Professional Experience

---

#### Senior Data Engineer

Feb 2025 – Present

*Publicis Sapient (RWE – Data Enrichment Platform)*

- As part of the Data Enrichment team, I analyzed, designed, and built end-to-end data flow pipelines for batch applications processing millions of records. Ingested data was received in the Fabric Lakehouse through pipelines, transformed using PySpark, and published as messages to downstream teams via Azure Service Bus. Response messages were then received back through Azure Service Bus and processed to populate the Gold Data Warehouse.
- Designed and implemented scalable batch data pipelines using Microsoft Fabric Lakehouse and PySpark.
- Integrated PI System source data and delivered curated datasets to the Gold layer.
- Built validation frameworks to track record counts across Bronze, Silver, and Gold layers.
- Optimized Spark jobs and Delta tables for performance, reliability, and scalability.
- Developed data quality pipelines to detect and handle null and invalid values in wind turbine datasets.

#### Data Engineer

Aug 2021 – Feb 2025

*Societe Generale (QURE – Data Quality Framework)*

- As part of the Development team, I contributed to building a data quality framework called QURE, an in-house solution designed to execute data quality controls on large-scale big data applications. The framework was BCBS 239 compliant, ensuring regulatory-grade data governance and risk reporting. It provided a simple yet effective approach to data quality measurement, where controls were defined and executed using lightweight SQL-based rules, enabling scalability and ease of implementation across data platforms.
- Designed and implemented new framework features including deduplication and rule-based validations.
- Developed SQL-driven data quality controls to support regulatory and risk reporting requirements.
- Built CI/CD pipelines using Jenkins and Kaniko to deploy Airflow components without Docker hosts.
- Developed and maintained Airflow DAGs for data orchestration, notifications, and monitoring.
- Resolved production defects and improved overall framework stability and performance.

#### Software Engineer

Jun 2016 – Aug 2021

*Tata Consultancy Services (Nordea – Analytics Platform)*

- As part of the Development team, I contributed to the development of a data analytics application for financial reporting. Data was extracted from the master zone of the data lake using Azure Data Factory and processed through multiple downstream models using PySpark APIs. The application provided detailed financial insights consumed through Power BI reports sourced from multiple systems.
- Built Spark and Hive-based ingestion and transformation pipelines for financial analytics.
- Developed PySpark transformations supporting multiple downstream analytical models.
- Optimized Scala-based Spark jobs achieving approximately 35% performance improvement.
- Supported Power BI reporting by delivering clean, validated, and analytics-ready datasets.

## Software Engineer

Tata Projects (Bank of America DCRS(Mainframe))

*Skills/Domain: Big Data*

- Worked in technology unit that supports a collection of content archives that are records (statements, notices, account records and reports). It's a banking enterprise archive for consumer checking, saving and card statements using XPTR and view direct.
- Developed and designed innovative programs as per new requirements.
- Made changes in existing code.
- Reduced storage and cost to operate for our channel partners and enhanced functionality for customers with improved report retrieval.

## Certifications

- 
- Microsoft Certified: Azure Data Fundamentals (2025)

## Education

---

**B.Tech – Electronics & Telecommunication Engineering**  
*Trident Academy of Technology, India*

**2016**
