

RUPARAMYASRI ALAMANDA

Full Stack Developer | React.js | Node.js | JavaScript | Python | MongoDB | SQL | Nearly 4 Years of Experience
Hyderabad, India | +91-8639246115 | ruparamyasri6115@gmail.com | linkedin.com/in/ruparamyasri

PROFESSIONAL SUMMARY

Full Stack Developer with nearly 4 years of experience building and maintaining scalable, secure, and high-performance web applications using React.js and Node.js. Experienced in developing multi-tenant web architectures, designing RESTful APIs, and integrating third-party services. Delivered a 30% reduction in API response times through performance optimization, caching (Redis), rate limiting, and SQL/NoSQL query tuning. Proficient in CI/CD pipelines using Jenkins and GitLab CI, Docker-based deployments, and AWS (S3, EC2). Follows Agile development methodology with a strong focus on clean, maintainable code, security (JWT, OTP, VAPT), and application scalability. Leverages AI tools — Claude Code, GitHub Copilot, and ChatGPT — to accelerate development workflows and reduce delivery cycle time by 25%.

CORE TECHNICAL SKILLS

Frontend: React.js, JavaScript (ES6+), jQuery, HTML5, CSS3, Bootstrap, Redux
Backend: Node.js, Express.js, FastAPI (Python)
Databases: SQL Server, MySQL, MongoDB, SQL Query Writing, NoSQL
APIs & Integration: REST APIs, WebSockets, Third-Party API Integration, Postman
Architecture: Multi-Tenant Web Applications, Microservices-based Architecture, Scalable System Design
CI/CD & DevOps: Jenkins, GitLab CI, Docker, AWS (S3, EC2), Git, GitHub
Auth & Security: JWT, OTP-based Authentication, VAPT, Application Security
Performance: Redis Caching, Rate Limiting, API Optimization, Query Tuning
Testing & Quality: Manual / Functional Testing, API Testing (Postman), Debugging, Code Reviews
Methodology: Agile, Cross-functional Collaboration, Clean Code Practices
AI Dev Tools: Claude Code (Anthropic), GitHub Copilot, ChatGPT (OpenAI)

PROFESSIONAL EXPERIENCE

Software Developer

Jan 2023 – Present

Enmovil Solutions Pvt Ltd | Hyderabad, India

- Developed and maintained full-stack web applications using React.js and Node.js, delivering a 30% improvement in API response times across production environments.
- Designed and implemented multi-tenant web architectures, enabling secure, isolated data environments for multiple clients within a single application instance.
- Built and consumed RESTful APIs and integrated third-party services across application layers, ensuring reliable and secure data flows.
- Architected real-time features using WebSockets, sustaining 100+ concurrent user sessions with zero performance degradation.
- Wrote clean, maintainable, and efficient code following best practices, conducting code reviews and functional testing to maintain high quality standards.
- Managed CI/CD pipelines using Jenkins and GitLab CI to automate build, test, and deployment processes, reducing release cycle time and human error.
- Troubleshooted, debugged, and upgraded existing systems to resolve performance bottlenecks and production issues proactively.
- Implemented Redis caching and rate limiting strategies to ensure application performance and stability under high-load conditions.
- Optimized SQL Server and MongoDB queries, improving data retrieval performance and overall system throughput significantly.
- Ensured application security and scalability through JWT/OTP-based authentication and VAPT-driven vulnerability remediation.
- Designed and deployed multi-tenant-ready Node.js backend APIs, capable of handling high-volume concurrent requests without latency spikes.
- Collaborated cross-functionally with product and QA teams in an Agile/Scrum environment to deliver features on schedule.

- Accelerated development using Claude Code, GitHub Copilot, and ChatGPT — reducing development cycle time by 25%.

Tech Stack: React.js · Node.js · Express.js · FastAPI · SQL Server · MongoDB · MySQL · Redis · WebSockets · JWT · jQuery · Jenkins · GitLab CI · Docker · AWS · Git · Multi-Tenant Architecture · REST APIs

KEY PROJECTS

RFQ & Vendor Bidding System

- Built a multi-tenant RFQ platform enabling multiple vendor organisations to participate in real-time bidding with live updates via WebSockets.
- Developed an automated bid ranking algorithm, reducing manual review effort and accelerating procurement decisions.
- Designed a scalable Node.js backend with rate limiting and caching, handling high-volume concurrent bid submissions without latency.

Bajaj – Shipment Management System

- Built a centralized shipment management platform to digitize and automate export workflows, reducing manual operational effort.
- Developed responsive React.js interfaces improving usability and streamlining shipment tracking and reporting for operations teams.
- Designed Node.js REST APIs and SQL Server data models to manage shipment data pipelines and automate workflow processes.

KEY ACHIEVEMENTS

- Reduced API response times by 30% through targeted backend optimizations and query restructuring in a live production environment.
- Sustained 100+ concurrent WebSocket connections with zero downtime by engineering a robust real-time architecture.
- Successfully delivered multi-tenant application features supporting multiple client organizations with fully isolated, secure data environments.
- Streamlined deployments by implementing Jenkins and GitLab CI pipelines, eliminating manual release steps and reducing deployment errors.
- Strengthened platform security via OTP authentication and VAPT-driven fixes, achieving compliant, vulnerability-free production deployments.

EDUCATION

M.Sc. in Mathematics CGPA: 9.4 / 10

C.R. Reddy College (Autonomous, Affiliated to ANU) | 2022

Relevant: Data Structures, Algorithms, Statistical Computing, Probability & Logic

B.Sc. in Mathematics CGPA: 9.67 / 10

St. Theresa's College, Adikavi Nannaya University | 2020

CERTIFICATIONS

Full Stack Development 2022 – 2023

Nxtwave Disruptive Technologies | React.js · Node.js · MongoDB · SQL · Python · REST APIs
