ORGANISATION SCAN

Tristha Global Pvt LTD | AI Business Analyst/Product Owner | Feb'25-Till date

Client : Maresheq Bank, Saudi Awwal Bank (SAB)

Key Deliverables:

- Lead end-to-end requirements gathering for AI-powered and digitally-enabled product feature.
- Produce high-quality BA artefacts: BRDs, FRDs, user stories, process maps, data flow diagrams, use case specifications, and acceptance criteria
- Use AI tools to prototype solution concepts, workflow designs, and process models — enabling rapid stakeholder feedback cycles
- Act as a Primary bridge Between business stakeholders, Clients & AI Engineering Teams throughout the delivery Lifecycle
- Identify process improvements and efficiency opportunities in the daily workflow.
- Analyzed current-state (AS-IS) workflows and designed future-state (TO-BE) process flows to identify gaps, streamline activities, and support AI-enabled process transformation.
- Own and manage the product backlog, ensuring alignment with business priorities and evolving requirements.
- Refine and define user stories and acceptance criteria for development readiness.
- Facilitate agile ceremonies including daily stand-ups, sprint planning, and sprint reviews.

- Mapped business capabilities to current and future-state processes, identifying capability gaps and opportunities for digital and AI-enabled transformation.
- Mapped end-to-end customer journeys across key product workflows to identify pain points, process gaps, and opportunities for digital and AI-enabled improvements.
- Developed end-to-end business process models using BPMN, documenting process activities, business rules, system interactions, data flows, hand-offs, and dependencies across current and future-state workflows.
- Contributed to transformation planning by identifying process improvement initiatives, prioritizing automation opportunities, and aligning implementation activities with business objectives.
- Monitor product performance metrics and drive data-backed improvements and decisions.
- Analyzed current-state (AS-IS) workflows and designed future-state (TO-BE) process flows to identify gaps, streamline activities, and support AI-enabled process transformation.
- Developed end-to-end business process models using BPMN, documenting process activities, business rules, system interactions, data flows, hand-offs and dependencies across current and future-state workflows.
- Identified process transformation and automation opportunities by assessing operational pain points, process inefficiencies and business requirements, and contributed to prioritization of improvement initiatives.
- Define and maintain the product roadmap aligned with business objectives and market trends.
- Gather, analyze, and manage stakeholder requirements and feedback to support product decisions.
- Collaborate with cross-functional teams to clarify requirements and ensure successful product delivery.
- Prioritize features and enhancements based on customer value, business goals, and team capacity.
- Drive product vision and strategic planning to achieve long-term business outcomes.

Accenture Solutions Private Limited | Agile Business Analyst | Scrum Master | July'21-Jan'25

Client - UBS Group

Key Deliverables:

- Gathered, analyzed and documented business requirements and prepared BRDs and functional documentation.
- Led end-to-end Target Operating Model (TOM) transformation, assessing AS-IS processes, identifying functional and operational gaps, and defining TO-BE operating processes across business and support functions.
- Designed and implemented future-state operating workflows, covering process changes, business/technology hand-offs, roles and operational dependencies to support the target operating model.
- Worked closely with Business, Finance, Credit Risk, Operations, Middle Office and Technology stakeholders to define and implement the target-state operating model.
- Translated TOM and business transformation requirements into functional requirements, optimized workflows and technology solutions.
- Coordinated UAT, test planning, defect resolution and business validation with client stakeholders to ensure readiness for implementation.
- Supported end-to-end TOM implementation through Go-Live, coordinating stakeholders, resolving implementation issues and supporting transition from the AS-IS to the TO-BE operating model.
- Identified process improvement and efficiency opportunities and supported continuous optimization of the implemented operating model.
- Built and maintained strong working relationships with global business and operations stakeholders.
