

SENTHIL T R

Chennai, India | +91 7449154084 | trs2197@gmail.com

PROFESSIONAL SUMMARY

Results-driven Routing Engineer with 6.5+ years of experience in IP/MPLS service provider networks, specializing in BGP, OSPF, and IS-IS configuration, route policy implementation, and routing protocol troubleshooting. Demonstrated hands-on expertise across Cisco IOS-XR, IOS-XE, and Juniper JUNOS platforms, with a proven track record of zero-impact migrations, peer provisioning, MPLS L2/L3 VPN deployment, and proactive network performance optimization. Collaborative team player with a growing focus on network automation and AI-assisted configuration management.

PROFESSIONAL EXPERIENCE

Network Engineer 2 – IP Network Implementation

Sep 2023 – Present

Comcast – Chennai, India

- Implement in-life routing and configuration changes across Sky's core IP network; troubleshoot BGP session and connectivity issues to maintain high availability and service stability.
- Lead network migration activities, decommissioning legacy routers and re-engineering BGP peering and routing paths to transition live traffic to new platforms with zero service impact during scheduled maintenance windows.
- Execute lifecycle management activities — replacing end-of-life (EOL/EOS) hardware (route processors, fabric cards, fan trays) and validating routing protocol convergence post-replacement to maintain network reliability.
- Lead peer provisioning for private, public, and transit networks — configuring, establishing, and troubleshooting BGP sessions, including session resets, route policy mismatches, and prefix filtering issues, to ensure seamless connectivity.
- Perform IOS-XE and IOS-XR software upgrades on Cisco NCS 5500 routers and Catalyst 9300/9200 switches, verifying routing protocol stability and adjacency states pre- and post-upgrade.
- Manage and support the DCN (Sky's out-of-band management network), ensuring reliable console and device access for routing troubleshooting during outages.
- Upgrade Link Aggregation Groups (LAGs) by adding member interfaces to existing bundles, improving network capacity and resilience.

Technical Delivery Associate – Global Network Change

Jun 2022 – Aug 2023

BT Group Plc – Bangalore, India

- Executed hardware upgrades on BT's global network devices, including Cisco ASR (ESP, RP, and power modules) and Juniper MX (SCB, RE, and PEM) components.
- Performed software upgrades on Cisco ASR 1013/1002-X and Juniper MX960 devices (IOS/JUNOS), confirming routing protocol stability following each upgrade.
- Executed configuration changes across MPLS and Internet platforms, including ACL updates, to enhance network security and routing performance.
- Handled acceptance and cessation of trunk links for MPLS and Internet platforms, validating routing adjacency and traffic flow before and after each cutover.
- Coordinated with field engineers on line card and optics installation across Cisco and Juniper devices.
- Developed a SQL query to streamline the retrieval of line card, router, and switch details for MPLS and Internet platforms, improving overall team efficiency.

- ▮ Strategically planned and designed telecom infrastructure and routing architecture for new IP Points of Presence (PoPs), supporting network expansion and service delivery.
- ▮ Managed the addition of 1G/10G/100G links, increasing backhaul capacity and validating routing and traffic distribution to support growing network demands.
- ▮ Analysed network and routing performance by proactively monitoring port health and BGP stability; initiated Bill of Materials (BOM) requests to resolve port capacity constraints in the IP network.
- ▮ Designed and validated routing scenarios (BGP, OSPF) in lab environments based on customer requirements; presented solutions to cross-functional teams for production implementation.
- ▮ Validated and tested routing protocol behaviour on new platform routers prior to production deployment, ensuring stability through traffic generation using IXIA.
- ▮ Performed end-to-end IPsec VPN configuration, troubleshooting, and partner validation for Tata IZO service deployments, ensuring reliable connectivity, routing integrity, and adherence to service quality standards across customer CPE environments
- ▮ Supported customer and backbone network migrations, including legacy device decommissioning (Cisco to Juniper) and routing path re-validation.
- ▮ Performed card grooming to diagnose and resolve port capacity constraints across the network.

TECHNICAL SKILLS

Routing Protocols & Troubleshooting	BGP (eBGP/iBGP, Route Reflectors, Communities, AS-Path/Local-Pref Manipulation, Route Policy & Traffic Engineering), OSPF (Areas, LSA Types, Adjacency Troubleshooting), IS-IS, Route Redistribution, Prefix Lists & Route Maps, BGP/OSPF/IS-IS Convergence & Flap Troubleshooting
MPLS & Service Provider	MPLS L2VPN/L3VPN, LDP/RSVP-TE, Segment Routing Fundamentals, QoS (Classification, Policing, Shaping), ISP Architecture
Switching, Resiliency & Security	VLANs, STP/RSTP, EtherChannel (LACP), HSRP, VRRP, IPsec VPN, GRE
Network Services	NAT, DHCP, DNS, ACLs
Platforms	Cisco IOS, IOS-XE, IOS-XR (ASR 1000, NCS 5500, Catalyst 9200/9300), Juniper JUNOS (MX960, MX480)
Automation	Python (Fundamentals), Cisco IOS/IOS-XE/IOS-XR Automation, AI-Assisted Development, Prompt Engineering

CERTIFICATIONS & TRAINING

- ▮ Cisco Certified Network Associate (CCNA) – Routing and Switching
- ▮ Cisco Certified Network Professional Enterprise (CCNP ENARSI)
- ▮ Juniper Networks Certified Internet Associate (JNCIA-Junos)
- ▮ Python for Network Engineers – Network Automation Fundamentals
