CORE COMPETENCIES

- System Design & Distributed Architecture
- Generative AI Safety & LLM Guardrails
- Secure Microservices & API Engineering (REST/gRPC)
- Cloud Security & DevSecOps
- Identity & Access Management (IAM)
- Web Application & API Security (WAF)
- Secure SDLC & Vulnerability Management
- Multi-Tenant & Cloud-Native Architecture
- Infrastructure as Code (IaC) & CI/CD Automation
- Security Analytics & Real-Time Threat Detection
- Advanced Threat Correlation & SIEM Integration

TECHNICAL SKILLS

- Programming & Frameworks
 - Python, Go, C++, JavaScript, SQL, Bash, YAML
 - Django, FastAPI, ReactJS
- Cloud & Databases
 - AWS, Azure, GCP
 - MongoDB, Snowflake, PostgreSQL
- System Design & Backend Architecture:
 - Microservices architecture, API design (REST/gRPC), event-driven systems, distributed caching, database optimization
- Security & DevSecOps
 - IAM, SSO, secrets management
 - Cloudflare WAF, AWS WAF, Mend (SCA/SAST), Red Hat ACS, Satori
 - Model Context Protocol (MCP), Wazuh, IBM QRadar, SIEM integration, advanced threat detection
 - Kubernetes, Docker, GitLab CI/CD, ArgoCD, Terraform, CloudFormation, Jenkins
- Monitoring, Analytics & Tooling
 - Elasticsearch, Kibana, Prometheus, Wazuh, PowerBI, Nginx
 - AWS CodeArtifact; local artifact repositories & package management

SHIVAM KEJRIWAL
Software Development Engineer 3 – Information Security

PROFILE SUMMARY

- Bringing around 4 years and 7–8 months of hands-on software development experience, with specialized focus on secure system design, distributed backend architectures, and cloud-native microservices.
- Serving as SDE 3 – Information Security at Innovaccer, leading design and development of security-focused microservices, APIs, multi-tenant platforms for large-scale healthcare SaaS products.
- Capability to engineer event-driven security platforms that sunk production vulnerabilities by combining automated remediation workflow, real-time threat-detection services, and virtual-patching pipelines.
- Designed and applied IAM services, WAF orchestration layers, and multi-cloud security governance systems that integrate with 50+ SaaS/cloud platforms and back > \$200K in annual internal savings.
- Recognized for building AI-driven developer-productivity tools (secure-coding assistant, RFP chatbot), architecting safety systems for generative AI platforms, mentoring engineers on secure system architecture, and embedding security-by-design into the SDLC.

WORK EXPERIENCE

Innovaccer, Inc. – Noida, India | Software Development Engineer 3 – Information Security
December 2025 – Present
Software Development Engineer 2 – Information Security (January 2025 – November 2025)

- Designed and rolled out an AI guardrails layer for the Gravity AI platform, adding protections such as prompt-injection defenses, clinical intervention filters, hallucination controls, and bias checks using fine-tuned BERT-based SLMs and rule-driven validators to make generative AI safe for clinical workflow.
- Built and operationalized Model Context Protocol (MCP) servers that connect with Wazuh & IBM QRadar, enabling structured log parsing, correlation, automated alerting; applied 28 custom MCP functions for advanced time-windowed searches & IOC-driven detections, boosting SIEM correlation speed & visibility.
- Led the complete security re-architecture and backend modernization for four acquired products, rewriting >10,000 lines of legacy PHP microservices into FastAPI, migrating them to Innovaccer’s IAM, logging, and multi-tenant security stack, and defining compliance alignment patterns across the portfolio.
- Backing secure-by-design practices for newly onboarded engineering teams by running threat-modeling workshops, establishing secure code-review practices, and guiding architecture decisions around multi-tenant data isolation and identity flows.

Software Development Engineer I – Information Security | July 2022 – December 2024

- Engineered a federated IAM microservices platform integrating with 50+ SaaS and cloud applications; designed REST APIs, token flows, and event-driven identity lifecycle workflow, eliminating third-party IAM tools and enabling just-in-time access while saving around \$120K annually.
- Architected and deployed a centralized password-management microservice built with Python, FastAPI, and Redis; designed async APIs, distributed caching logic, and rate-limiting strategies to handle 1 million concurrent authentication requests with sub-100ms latency, backing multi-tenant user authentication across healthcare SaaS products.
- Engineered an automated WAF rule-management and infrastructure pipeline for orchestrating Cloudflare security policies at scale; authored 500+ custom WAF rules and designed rule schemas, deployment workflow, and CI/CD integrations enabling product teams to safely deploy and test custom security policies while maintaining enterprise baselines.
- Built a real-time configuration-drift detection and rollback service using AWS Lambda, Azure Functions, and event streams; designed it to monitor infrastructure changes across AWS and Azure and automatically revert unauthorized updates within about 5 seconds for 1,000+ events, cutting MTTR.
- Designed a virtual-patching orchestration pipeline that connects vulnerability scanners, security advisories, and incident systems; modeled remediation workflow as event-driven microservices, bringing open production vulnerabilities down from 15,000 to 50 over 8 months via faster, automated remediation cycles.
- Developed a multi-cloud security governance service that ingests around 250,000 security data objects per day from ~70 sources, normalizes them, and runs rule-based analytics to surface 500+ high/critical vulnerabilities monthly, contributing to about \$80K in yearly operational savings.

AI/ML Security

- Fine-tuned BERT-based SLM models, prompt injection prevention, hallucination detection, bias detection, rule-based validators, LLM safety frameworks

Compliance & Governance

- SOC 2, HIPAA, HITRUST, MARS-E, NIST 800-53, FedRAMP
- Risk assessment, data privacy and security governance

CERTIFICATIONS

Certified Kubernetes Administrator (CKA) – Nov 2025

Microsoft Azure Security Engineer Associate (AZ-500) – Sep 2025

Pursuing: Certified Kubernetes Application Developer (CKAD) – expected completion December 2025

EDUCATION

B.Tech, Computer Science & Engineering
The LNM Institute of Information Technology,
Jaipur, Rajasthan, India | 2022 | CGPA: 8.52

PERSONAL DETAILS

Languages Known: English, Hindi

Location: Noida, UP

- Created an AI-powered secure-coding assistant using generative AI and Git commit history; designed data pipelines, LLM integration, and training-scenario generation to embed secure-coding knowledge into developer workflow, refining secure-coding efficiency by ~80% and cutting SAST-detected issues by ~75% in onboarded teams.
- Developed an LLM-based chatbot for security questionnaires and RFPs leveraging large language models and vector embeddings; engineered context-retrieval systems, prompt optimization, export routines, reducing manual response time per 52-question RFP from ~250 minutes to under 3 minutes while maintaining 98% contextual accuracy.
- Contributed to Innovaccer's move from single-tenant to secure multi-tenant architecture by helping design tenant-isolation models, granular RBAC policies, and schema strategies for shared services, ensuring compliance with HIPAA and HITRUST standards.

INTERNSHIP

Software Development Engineer Intern – Information Security | January 2022 – June 2022

- Assisted in building security microservices and dashboards that braced application and infrastructure security across the healthcare platform.
- Researched emerging attack patterns and incorporated findings into design references for new services.
- Tested and validated security tools and services before production rollout, documenting behavior, failure modes, and operational runbooks.
- Helped create a security monitoring dashboard offering near real-time visibility into vulnerabilities and misconfigurations across cloud accounts.

Innovaccer, Inc. – Noida, India | Software Development Intern – Platform Engineering May 2021 – August 2021

- Aided platform engineering team in designing & deploying backend microservices & deployment tooling.
- Developed a Schema APIs microservice that serves as the central schema generator for all databases during deployments, reducing infrastructure provisioning time by roughly 15% and being recognized as the best intern project among 35 ideas.

PROJECTS & RESEARCH

- **System and Method of Managing Security in a Multi-Cloud Environment (Patent)** – Filed with USPTO and the Indian Patent Office in January 2024; aggregates around 250,000 unique data objects per day from about 70 sources, applies rule-based analysis, and issues alerts for potential vulnerabilities.
- **Rainfall Estimation and Prediction Using Artificial Intelligence (Research Paper)** – Presented at Congress on Intelligent Systems 2021; published in Lecture Notes on Data Engineering & Communication Technologies, vol-111, Springer, Singapore, DOI: 978-981-16-9113-3-59.
- **Spatial & Temporal Analysis using Deep Neural Network (Research Paper)** – Led spatial-temporal rainfall analysis using 21 weather parameters and a dataset of about 200,000 rows from the PSL NOAA Climate Repository, achieving strong accuracy for moderate rainfall prediction in parts of Rajasthan.
