Associate Technical Project Manager | MAQ Software

Focus: Client Delivery • GenAI/RAG & Agentic delivery • HLA/HLD • Data Transformation (ETL) • Automation

PROFESSIONAL SUMMARY

- Associate Technical Project Manager with ~6 years in software delivery, with domain exposure across Legal, Sustainability, and FMCG enterprise programs.
- Leads delivery end-to-end using Agile practices and Azure DevOps, Jira: scope/plans, stakeholder alignment, RAID/dependencies, UAT, releases, and transition to sustainment.
- Partners with architects on high-level architecture/design (HLA/HLD) to translate business needs into system flows, integrations, data movement, and non-functional requirements early in the lifecycle.
- Drives GenAI/RAG and agentic workstreams (LangGraph), data transformation using Azure tech stack, and automation using Large Language Models (LLM), Azure AI Search/vector databases, Power BI, and Python/SQL to improve data reliability and reduce manual effort.

PROFESSIONAL EXPERIENCE

Associate Technical Project Manager | MAQ Software | Hyderabad

April 2023 – Present

Client-facing delivery lead across Legal, Sustainability, and FMCG programs. Partner with architects on HLA/HLD, GenAI/RAG + agentic workflows (LangGraph), and Modern Data Platforms (Fabric/ADF/Databricks); drive automation and delivery governance via Azure DevOps/Jira through UAT and releases .

- Directed end-to-end delivery for multi-workstream enterprise initiatives across Legal, FMCG, and Sustainability; drove scope control, milestone tracking, and stakeholder alignment.
- Co-led early-phase solution shaping with architects: translated client problem statements into initial HLA/HLD drafts (system flows, integrations, data movement, NFRs), iterating with architects to validate and finalize the design for sign-off.
- Drove GenAI/RAG delivery as the program lead, defining the delivery plan, risks, and acceptance criteria; partnered with architects/engineers to review and guide retrieval design, evaluation approach, and integrations with LLMs + Azure AI Search/vector DBs, unblocking issues to keep releases on track.
- Led adoption of agentic workflows using LangGraph to orchestrate query routing, tool calling, and verification steps on top of RAG; improved reliability and reduced manual review.
- Owned delivery governance for ETL/data transformation on ADF and Databricks, aligning engineering execution (Python/SQL) for migration, cleansing, validation, and reconciliation to ensure Power BI-ready datasets.
- Program-managed the transition from email/Excel-based sustainability data collection to a web submission portal, supported by automated validation and ADF + Databricks (medallion) processing to reduce BU back-and-forth and improve data consistency for Power BI reporting.
- Orchestrated Agile governance in Azure DevOps, Jira (ceremonies, sprint tracking, RAID and dependency management) and presented delivery health and financial insights through MBR-style reporting.
- Improved user story cycle time from 15 to 10 days by enforcing readiness gates, dependency resolution, and WIP control.
- Reduced escaped defects from 3 to 0 per release and maintained 95% Definition of Done (DoD) adherence through release readiness checklists and evidence-based acceptance.
- Orchestrated UAT and go-live readiness across multiple releases; improved post-launch stability through test planning, defect triage, and comprehensive handover documentation.

Senior Systems Engineer | Infosys Limited | Hyderabad

June 2018 – June 2021

Automation engineer focused on developing API and web regression testing. Built automation frameworks and CI execution pipelines to reduce manual effort and improve defect detection.

- Built and maintained Python/Selenium test automation to boost regression coverage and software reliability.
- Designed an API testing approach that reduced false-negative defects by 20%, improving quality for the client.
- Engineered customized API automation workflow, cutting execution effort from ~600 hours to ~1 hour (99% reduction).
- Implemented Azure DevOps pipelines for scheduled and repeatable test execution, eliminating manual oversight for regression runs.
- Built a lightweight utility to automate bug report distribution to stakeholders, improving visibility and speeding issue turnaround.

INTERNSHIP

ICT Manager Intern | Greenko Energies Pvt. Ltd. | Hyderabad

April 2022 – June 2022

MBA summer intern supporting ICT leadership on cloud modernization and BI optimization. Focused on vendor coordination, capability assessment, and roadmap planning for data/analytics modernization.

- Supported day-to-day ICT governance: stakeholder syncs, status tracking, production issue monitoring, and escalation coordination across teams.
- Partnered with external vendors to support implementation planning for AWS-based Data Warehouse and BI platform initiatives.
- Assessed current ICT capabilities and constraints; developed a phased roadmap with timelines to transition from on-prem SQL servers to cloud-based solutions.
- Conducted research and cost-benefit analysis for expanding ICT capabilities to include an AI/ML function, presenting feasibility findings to stakeholders.
- Assisted in improving BI/reporting visibility using Grafana and Power BI, contributing to dashboard performance and usability enhancements.

EDUCATION

Master of Business Administration (MBA), 2023 | Indian Institute of Management (IIM), Kashipur

Bachelor of Engineering (B.E. - Electronics & Communication), 2018 | MJCET, Hyderabad

CERTIFICATIONS

Microsoft Certified: Fabric Analytics Engineer Associate (2024) | Google Project Management: Professional Certificate, Coursera (2024) | Lean Six Sigma Green Belt (2021) | Google Data Analytics (2021) | Agile Project Management & Delivery (2021)

CORE SKILLS

Program & Delivery: Project Planning & Scheduling, Agile/Scrum, Workstream/Portfolio Tracking, RAID & Risk Mitigation, Dependency Management, Change Control, Executive Reporting (MBR), UAT & Release Management

Architecture & GenAI: High-Level Architecture (HLA), High-Level Design (HLD), Retrieval-Augmented Generation (RAG), Semantic Search, Large Language Models (LLM), Vector Databases (Pinecone, Milvus), Agentic Orchestration (LangGraph)

Data & Analytics: ETL/Data Transformation, Data Quality & Reconciliation, Azure AI Search, Power BI, Tableau, Advanced Excel

Cloud & DevOps: Microsoft Azure, Azure DevOps, Jira, CI/CD Pipelines

Engineering: Python, SQL, NoSQL, REST APIs, Selenium, C#, Java
