Professional Summary

Seasoned Cloud & DevOps Professional with **13+ years of IT experience**, including **6 years** specializing in Azure Cloud Infrastructure, Automation, and CI/CD pipeline engineering. Expert in designing, implementing, and optimizing scalable, secure, and cost-efficient cloud solutions using Azure, Terraform, Kubernetes, and Azure DevOps. Skilled in Infrastructure as Code (IaC), GitOps, and DevSecOps practices for end-to-end automation and compliance. Proven track record of reducing deployment times by 40%, improving uptime and security posture, and driving cloud modernization and operational excellence. Passionate about mentoring teams, optimizing delivery pipelines, and building reliable, high-performance infrastructure in Agile environments.

Technical Skills

Cloud Platforms: Microsoft Azure

Infrastructure as Code: Terraform, AzureDevOps (YAML)

CI/CD & GitOps: Azure DevOps, GitHub Actions, Argo CD, Helm

Version Control: Git, GitHub, Azure Repos

Scripting & CLI: PowerShell, Bash, Azure CLI, Python (for automation)

Containerization & Orchestration: Docker, Kubernetes(AKS)

Monitoring & Logging: Prometheus & Grafana

Security & Access Management: Azure Key Vault, Defender, Sentinel, NSG, Firewall

DevSecOps & Compliance: Checkov, Trivy, TFSec, TFLint, SonarQube

Networking: DNS, VPN, Load Balancer, Private Endpoints, Ingress Controller, Network Policies

Project Management Tools: Azure Boards, JIRA

Work Experience

KVG Agro Pvt. Ltd. — Noida, India

Apr 2024 – Current

Senior DevOps Engineer

- Automated Azure infrastructure provisioning using modular Terraform, achieving 100% configuration consistency and faster deployments.
- Designed Azure Landing Zones with reusable Terraform templates ensuring security, compliance, and scalability across environments.
- Built multi-stage CI/CD pipelines (Azure DevOps + GitHub Actions) improving release velocity by 40% and reducing manual interventions.
- Deployed and managed microservices on AKS with node pool isolation, auto-scaling, and self-healing strategies for high availability.
- Designed multi-tier architectures integrating Azure Front Door, API Management, and Application Gateway for global load balancing and API lifecycle management.
- Optimized Azure spend through reserved instances, auto-scaling, and proactive cost management dashboards leveraging Azure Advisor insights.
- Executed Lift & Shift migration assessments and data migrations using Azure Migrate and DMS to modernize legacy systems.
- Managed full lifecycle Azure implementations under Agile frameworks with focus on risk mitigation and stakeholder communication.
- Implemented GitOps with Argo CD and OCI-compliant images from Azure Container Registry (ACR) for declarative deployments.
- Integrated security scanners (SonarQube, TFSec, TFLint, Trivy, Checkov) into pipelines, cutting misconfigurations by 50%.
- Established DevSecOps pipeline with image scanning, dependency validation, and secret rotation via Azure Key Vault.
- Provided L3 support for Azure infra, Linux servers, and network connectivity (VPN, routing, proxy) ensuring system uptime & compliance.

Ericsson India Pvt. Ltd. — Noida, U.P

July 2021 – Mar 2024

DevOps Engineer

- Developed multi-stage CI/CD pipelines using Azure Pipelines to standardize deployments across environments.
- Managed Azure IaaS/PaaS components — VNets, App Services, Functions, and Storage Accounts — with governance via RBAC & Azure Policies.
- Designed and implemented Hub-and-Spoke network topology with centralized shared services in the Hub VNet and segregated workloads in Spoke VNets, ensuring secure, scalable, and compliant network communication.
- Automated connectivity using VNet Peering, VPN Gateway, ExpressRoute, and Private Endpoints for hybrid workloads.
- Implemented high availability & DR with Azure Front Door, Backup Vault, and Geo-replication for business continuity.
- Enhanced observability using Azure Monitor, Log Analytics, and Application Insights, enabling proactive issue detection and performance tuning.
- Implemented governance framework with standardized naming conventions, tagging, and cost-center mapping for compliance and manageability.
- Configured budget alerts, resource tagging, and cost forecasting dashboards using Azure Cost Management for budget adherence.
- Enhanced operational efficiency with Logic App workflows and Azure Automation runbooks for routine maintenance.
- Collaborated with global dev and infra teams to align provisioning and deployment pipelines, improving release efficiency and system reliability.
- Organized internal bootcamps and Azure capability uplift programs, contributing to organization's Cloud Center of Excellence (CoE).

Reliance SMSL Ltd. — Patna, Bihar

Mar 2018 – May 2020

DevOps & Linux Systems Engineer

- Automated routine operations using Bash scripting and cron jobs, improving efficiency and reducing manual errors by 30%.
- Managed Linux servers, web services (Apache/Nginx), and CI/CD with Jenkins and Git.
- Handled Azure-based test environments for compute, storage, and security configuration.
- Strengthened monitoring through custom alert scripts and native tools to maintain 99% system uptime.

Essay Ericsson Pvt Ltd. — Patna, Bihar

Dec 2010 – Feb 2018

System Administrator

- Managed server provisioning, kernel patching, and system hardening for 350+ production systems.
- Monitored RAN/OSS environments using ENM, Nagios, and Zabbix, improving fault detection time by 40%.
- Supported core network services (DNS, DHCP, FTP, NTP) and collaborated with NOC teams for rapid issue resolution.
- Maintained audit-ready documentation and uptime reports for SLA compliance.

Projects

Cloud-Native Monitoring & Control Platform for Dairy Industry

- Deployed microservices on AKS using Docker, Terraform, and GitOps (Argo CD).
- Built Azure DevOps CI/CD pipelines enabling automated build, test, and release workflows.
- Implemented observability (Prometheus, Grafana, Azure Monitor) and SLO-based alerting, reducing downtime by 35%.
- Container images published via Azure Container Registry with integrated incident response automation.

Telecom Network Operations Automation (Singapore Telecom Client)

- Automated RAN site health monitoring and KPI reporting for 300+ sites, saving 60% manual effort.
- Integrated Ericsson ENM data with Azure Monitor and Grafana dashboards for unified observability.
- Used Terraform for provisioning hybrid infra (VPN Gateway, Log Analytics, VMs).
- Used Terraform to provision hybrid Azure infrastructure (VPN Gateway, Log Analytics, VMs) for real-time NE monitoring.
- Implemented AKS-based alarm monitoring with Argo CD for continuous delivery and Azure RBAC + backup automation for SLA adherence.
