

SAPNADIP BAIDYA

8013687055 | sapnadip.baidya.official@gmail.com | LinkedIn: [sapnadipbaidya](#) | [website](#)

SKILLS

- **FRONT-END DEVELOPMENT:** Micro-Frontend, svelte, React.js, React Native, Redux, Angular, NextJs, Material UI, HTML5, CSS3, PNPM, Turborepo
- **BACK-END DEVELOPMENT:** Java, Python, Spring Boot, Hibernate, Express.js, Node.js, FastAPI, SQL, Redis, WebSockets, Microservices, RESTful APIs, JUnit, ClickHouse, MQTT, Eureka, NGINX, Docker
- **AI & ML:** RAG, LLM Integration (OpenAI, Anthropic APIs), NLP, OCR, Vector Databases, Data Visualization, Generative AI, Agentic AI, Prompt Engineering, LangChain, LangGraph, FAISS, Bedrock
- **CLOUD & DEVOPS:** AWS (Lambda, S3, EC2, Boto3), GCP, Kubernetes, Jenkins, GitLab CI/CD
- **TOOLS & MISCELLANEOUS:** Directed Acyclic Graph (DAG), Git, JIRA, Agile, Scrum, Machine Learning

EXPERIENCE

2025-Present

MARKETS AND MARKETS - Bangalore, India

SOFTWARE ENGINEER

- **Engineered** a secure full-stack video platform featuring a **React**, MUI and Framer Motion frontend with adaptive auto-quality playback, powered by a **FastAPI**, **Celery**, and **FFmpeg** backend, **safeguarded media delivery via 30-minute S3 presigned URLs** and Cloudflare masking, with Redis and MongoDB managing state and metadata.
- **Developed and launched an AI-powered chatbot interface** leveraging **WebSockets**, **Event Streaming**, **RAG**, **FAISS**, **OpenAI**, **Anthropic APIs** - driving a **60% increase in customer satisfaction scores**.
- **Fabricated LinkedIn Chrome Extension** using Svelte, FastAPI, and MongoDB, enabling real-time LinkedIn profile extraction of email and phone, authentication aware workflows, and SalesPlay API integration. **Improved prospecting efficiency by 40%**, lowered manual data entry by 90%, and made a lightweight extension experience optimized for faster user adoption.
- **Modernized legacy frontend build infrastructure by integrating Vite packaging** into an existing Webpack-based React application, reducing build times by **60%** and streamlining migration workflows across multiple modules.
- **Redesigned the Webpack build pipeline using Terser minification, CSS optimization, Brotli/Gzip compression**, and modular chunk splitting, Turborepo for independent deployments, reducing bundle size and improving caching and page-load performance.
- **Designed a robust Java-based authentication and access-control framework** with Spring Security and JWT, securing user endpoints and reducing security-related incidents by 40%.
- **Implemented scalable and fault-tolerant Java/Spring microservices** with caching + rate limiting, reducing p95 latency under load and improving resilience.
- **Led the end-to-end design and implementation of the SalesPlay UI layer as the UI Lead**, using React.js—boosting system responsiveness by **30%**, streamlining customer journeys, and driving adoption across multiple product lines..
- **Architected and delivered a scalable, database-driven UI framework**, enabling rapid UI deployment and cutting development time by **80%** across cross-functional teams.
- **Engineered** a hybrid MongoDB and SQL architecture, enhancing data retrieval performance and supporting complex analytics use-cases **by leveraging Pandas and NumPy** for high-speed data aggregation and transformation, resulting in a **30%** reduction in average query latency and improving data throughput by **60%**.
- **Crafted and deployed highly reusable UI components** including tables, cards, and containers with full support for recursive rendering of deeply nested data structures, enhancing scalability, maintainability, and code reusability across the application.
- **Built scalable event-driven services** using Kafka for durable event streaming, Redis for low-latency caching, **pub/sub** messaging for real-time client updates supporting high-frequency, high-throughput workloads with better resilience.

2022-2025

HIGHRADIUS - Hyderabad, India

ASSOCIATE SOFTWARE ENGINEER

- **Owned** development to modernize legacy systems using React.js, Java, and Spring, **driving** a 40% uptick in platform performance and **scaling** usage to over 1,000 concurrent enterprise users.
- **Instituted** data-driven workload balancing through custom round-robin algorithms in Java & Spring, **expediting** delivery of high-impact projects and **achieving** a 50% reduction in delivery times.
- **Optimized** back-end architecture, **slashing** operational costs by 40% and **amplifying** application speed by 50% through SQL tuning and Redis integration.
- **Pioneered** automation in business processes by **implementing** a digital booking solution, **minimizing** labor costs by 30% and office overhead by 10%
- **Enhanced** software quality through the **automation** of testing pipelines with PuppeteerJS and Angular, **elevating** test coverage and system reliability by 80% for AI-powered modules.

AWARDS & ACHIEVEMENTS

- [Highako of the quarter Q4 2022-2023](#) **Recognized as Highako of the Quarter (Q4 2022-2023)** for delivering critical project milestones 30% **ahead** of schedule and achieving **95% client satisfaction**
 - Facilitated an engaging online [workshop on IoT](#) and ML, resulting in the creation of a dedicated community forum that now supports 50+ ongoing discussions and knowledge-sharing among participants.
-
