EDUCATION

BITS PILANI GOA CAMPUS

B.E.(HONS.) ELECTRONICS AND
INSTRUMENTATION
2013 - 2017

COURSEWORK

Computer Programming
Object Oriented Programming
Modern React with Redux
Advance React and Redux

SKILLS

Java
Spring Boot
Micro-services
Jenkins
Kibana
Log4J
AWS Cloud(EC2,S3,SES)
MySQL
MariaDB
MongoDB
Dropwizard
Hibernate
JPA
RESTful APIs
Apigee
Pagerduty
Spulnk
SonarQube
Maven
JavaScript
NodeJs
React
Redux
HTML5
CSS3

EXPERIENCE

BOOTHBLOOM | LEAD SOFTWARE ENGINEER

March 2024- Present | Bangalore

- Lead a team of 3 developers in the end-to-end architecture and development of a responsive, large-scale web application from the ground up.
- Built APIs using Java, Springboot, MySQL for scalable microservices.
- Engineered a high-performance analytics dashboard using React, visualizing complex business metrics with various charts, graphs, and bar graphs.
- Designed and built supporting REST APIs using Node.js and MongoDB to handle asynchronous data, real-time updates, and user authentication flows.
- Mentored junior and mid-level developers, led code reviews, and established best practices for UI development and API integration.

BAZAARVOICE | SOFTWARE ENGINEER

December 2020- March 2024 | Bangalore

- Led the design and maintenance of RESTful APIs using Java, Dropwizard, and Hibernate/JPA, managing public API exposure through Apigee Edge.
- Engineered scalable, reusable, and test-covered React components for enterprise-level UIs, including data tables, modals, and file upload modules.
- Spearheaded the successful migration of 5 microservices from Java 8 to Java 17, including a major Dropwizard upgrade (to v2.0.0).
- Optimized a critical notification poller, leveraging AWS SES and S3, to increase throughput from 2 to 120 notifications per minute.
- Configured Log4J and Kibana dashboards to monitor application logs, track performance, and troubleshoot production issues.
- Integrated SonarQube and GitHub Actions to enforce code coverage checks, improving overall code quality and maintainability.

SABRE TRAVEL TECHNOLOGIES | ASSOCIATE SOFTWARE DEVELOPER

September 2017- September 2019 | Bangalore

- Developed a corporate travel application from scratch as a full-stack developer, using Spring Boot, Hibernate, and React.
- Owned the end-to-end design of multiple features, from MySQL/MariaDB database schema design and JPA entity creation to dynamic frontend implementation in React.
- Wrote complex, optimized SQL queries to reduce server load by performing data manipulation directly within the database.
- Built and deployed microservices on AWS EC2 instances and managed dependencies and builds using Maven.
- Utilized Java's asynchronous APIs for parallel programming to optimize backend request handling and performance.
