PROFILE

Mid-Level Full Stack Developer with 3+ years of experience designing and building scalable web applications using React, Node.js, MongoDB, and AWS cloud services. Proven expertise in performance optimization, large-scale data migrations, and automation pipelines powered by AI APIs. Skilled in architecting full-stack systems under tight deadlines, integrating third-party platforms (Salesforce, Zendesk), and owning projects from design through CI/CD deployment. Currently delivering high-impact platform rebuilds and cloud-backed data infrastructure as a Software Engineer at DAZN.

SKILLS

- **Core Development:** React 18, JavaScript (ES6+), TypeScript, Node.js, Express.js, REST APIs, MongoDB
- **Architecture:** Microservices, REST API Design, CI/CD Pipelines
- **Testing:** Jest (4,000+ test cases, CI-integrated)
- **Frameworks & Libraries:** React Three Fiber, React Flow, Three.js, Vite, SCSS
- **AI & Data Visualization:** OpenAI APIs, Apache ECharts
- **Cloud & Infrastructure:** AWS CloudFront, AWS DynamoDB, AWS S3, GitHub Actions (CI/CD), Git, GitHub
- **Platforms & Tools:** Zendesk, Salesforce, DocuSign, Gmail API, Faker.js, Cytoscape

WORK EXPERIENCE

Software Engineer, DAZN

Hyderabad, India

Sept 2025 – Present

All work delivered within DAZN's live customer support ecosystem — serving hundreds of thousands of users daily across subscriptions, marketing, and help center operations across multiple markets.

Tech used: *React 18, Vite, Node.js, TypeScript, REST APIs, Zendesk, Zendesk App Tools (ZAT), Salesforce, DocuSign, AWS CloudFront, AWS DynamoDB, AWS S3, GitHub Actions, Jest, JavaScript*

- Built and shipped a full-stack Foxtel Help Center platform from scratch — serving 5,000–10,000 daily users and 1,000+ migrated articles — as an emergency rebuild after Foxtel's legacy system failed irrecoverably. Designed both the React 18/Vite frontend and Node.js backend from scratch.
- Optimized frontend performance via React lazy loading, code splitting, and Vite build optimizations, reducing page load time by 67% compared to the legacy platform; backend delivery further accelerated through AWS CloudFront CDN integration.
- Led the technical execution of a ~1 million record migration from Salesforce to Zendesk — enabling the client to discontinue an expensive Salesforce Enterprise subscription — including schema design, DynamoDB table architecture, S3-based file storage for migrated assets, and creation of 200K+ Zendesk user records via high-volume API operations against platform rate limits.
- Redesigned the DynamoDB data model for the Help Center and Zendesk custom app — restructuring a monolithic table into normalized multi-table schemas — to enable efficient CRUD operations and support real-time frontend workflows at scale; backend APIs implemented in TypeScript for type safety and maintainability.
- Engineered CI/CD pipelines for Zendesk custom app deployments using GitHub Actions — automating ZAT bundle validation, Jest test suite execution (4,000 cases, 95% coverage and pass rate thresholds), and parallel deployment to Zendesk Support and Sell servers, with post-deployment verification via Zendesk status API polling.
- Engineered an end-to-end DocuSign integration — including RSA key-based authentication with automatic token refresh, contract sending with full UI/brand/content/signature placement customisation, bulk contract dispatch to multiple recipients, and per-stage audit logging — enabling non-technical users to manage the entire contract workflow without code changes.
- Integrated CloudFront cache invalidation via API to ensure real-time content freshness across the Help Center platform.
- Maintained and enhanced a production Zendesk custom application — resolving 100+ bugs, implementing UI improvements, and owning a 4,000-case Jest test suite integrated into the CI/CD deployment pipeline.

Software Engineer, Gaian Solutions

Hyderabad, India

2023 – 2025

Project KYA

Tech used: *React, HTML5, CSS, JavaScript, Node.js, REST APIs, Three.js, GitHub, Vite, Cytoscape, OpenAI APIs*

- **Knowledge Management Canvas:** Built a configurable canvas interface for file uploads and CRUD operations on structured data nodes via Node.js REST APIs, with dynamic UI rendering driven by database-stored JSON configs — enabling non-technical users to manage complex data structures without code changes.
- **Business Entity Extraction:** Designed and deployed a Node.js pipeline leveraging OpenAI vector search APIs to extract business entities from documents, generate structured entity models, and build enterprise search indexes, improving enterprise-wide search and discovery.
- **3D Processor Pipeline:** Developed a pipeline to generate primitive 3D objects with OpenAI APIs, converting them into JSON configs for rendering in simulations.

Project XPX

Tech used: *React, HTML5, CSS, JavaScript, Node.js, REST APIs, Three.js, GitHub, Vite, React Three Fiber, React Flow*

- **Website Optimization:** Reduced initial load time by 55% (20s → 9s) through React lazy loading and Vite optimizations; improved Lighthouse score to 98, enhancing user experience.
- **Dynamic Query Generator:** Automated query creation by developing a Node.js service integrated with OpenAI APIs, cutting generation time by 60% and accelerating data processing.
- **Synthetic Data Generator:** Built a Node.js service with Faker.js to generate large datasets for backend tables, reducing data preparation time by 90% and improving testing efficiency.
- **Communication Tracker Service:** Built a Node.js service integrating Gmail APIs to monitor and analyze email communication metrics in real time, automating processing of ~50 emails/hour and reducing backend load by 10%.
- **3D Workflow Designer:** Created an interactive 3D canvas with React Three Fiber and React Drei for drag-and-drop workflow automation (emails, SMS, etc.); integrated business logic with third-party APIs, reducing manual effort by 40% and improving engagement management.

Data Orchestration Project

Tech used: *React, REST APIs, Apache ECharts, HTML5, CSS*

- **Data Orchestration Platform:** Led development of a platform integrating third-party APIs, enabling automated workflows for data fetching and processing; reduced manual intervention by 60% and improved operational efficiency.
- **Analytics Dashboard:** Built an interactive dashboard with React and Apache ECharts for real-time query visualization, accelerating data analysis by 50% for internal and client reporting.
- **Custom Query Features:** Extended the analytics dashboard with multi-query selection, dynamic dataset switching, and customizable chart types using React and Apache ECharts, enabling analysts to explore diverse data structures without engineering support.

DevOps Automation Project

Tech used: *HTML5, CSS, JavaScript, Node.js*

- Developed 250+ backend APIs across a microservices architecture integrating with third-party cloud services (AWS, Azure) to process and return structured data — forming the core data layer for downstream UI consumption.
- Integrated a user-friendly API selection UI using HTML, CSS, and JavaScript, improving data retrieval efficiency by 40% and reducing API query time by 30%.

Co-founder, Family Handicrafts Business — Self-employed

Hyderabad, India

Feb 2018 – Nov 2019

- Co-managed a social enterprise supporting 10 women artisans across 2 local retail outlets in Santiniketan, returning the majority of revenue directly to makers. Operations discontinued due to Covid-19.

EDUCATION & TRAINING

IIT Madras — Foundation in B.Sc. Programming and Data Science	CGPA 8.3	2020 – 2021
Online		
10x Academy — Full Stack Developer Bootcamp		2022 – 2023
Online		
University of Sussex — M.Sc. in Financial Mathematics	62%	2016 – 2017
Brighton, UK		
Visva Bharati University — B.Sc. in Mathematics	81%	2012 – 2015
West Bengal, India
