Process Excellence & Digital Transformation Lead | Lean Six Sigma Black Belt

PROFILE SUMMARY

Process Excellence & Digital Transformation Lead with 13+ years of total experience, including 8+ years of expertise leading Operational Excellence, Continuous Improvement & Process Governance Programs.

Proven track record across **Banking, Mortgage Lending, Finance (AP)** with extended experience in IT Process Re-engineering (**EdTech, Logistics**) and Digital Transformation.

Certified Lean Six Sigma Black Belt adept at driving end-to-end DMAIC initiatives, executing Value Stream Mapping (VSM), managing risk and mitigation frameworks (FMEA) and standardizing SOPs across operations — consistently translating process improvements into measurable ROI through FTE savings and cost efficiency.

Accomplished CI Coach with demonstrated success mentoring of CI agents, deploying **Target Operating Models (TOM)** and partnering with senior leadership to drive measurable efficiency, capacity and turnaround time gains.

Early hands-on experience governing **Agentic AI** workflows — designing exception-handling logic and **Human-in-the-Loop (HITL)** controls for autonomous process automation.

Experienced in **project management**, ranging from driving self-initiated workflow transformations to leading dedicated 7-member operational excellence team. Skilled in delivering projects via **Agile methodologies**, structuring sprint deliverables, and **supporting project owners** to achieve strategic milestones.

CORE COMPETENCIES

Transformation & Leadership: Business & Digital Transformation, Stakeholder Management, Change Management, Agentic AI Governance, CI Coaching, Technical-Functional Bridging

Methodology & Risk Analysis: Lean Six Sigma, DMAIC, Root Cause Analysis (RCA / 5-Why / Fishbone Analysis), Pareto Analysis, Failure Mode & Effects Analysis (FMEA), Kaizen, Value Stream Mapping (VSM), Time & Motion study, Process Optimisation, Data Driven Insights

Operational Governance: Business Process Re-engineering (BPR), Target Operating Model (TOM), SOP Standardization, SLA/KPI architecture, VOC, SIPOC, BRD/FRD Creation, Project Charter, GCC, Agile Delivery Frameworks

Process Intelligence & Tools: BPMN 2.0 Process Mapping (SAP Signavio/Visio), Process Mining (SAP Signavio, Celonis-trained), JIRA, Confluence, Power BI, Advanced Excel

PROFESSIONAL EXPERIENCE

IRIS Software | Lead – Optimisation Consultant

(Apr 2024–May 2026)

Managed transformation, process re-engineering and automation frameworks

- **Governed the Process Architecture for DaaS and Agentic AI initiatives**, architected **BPMN 2.0 decision-logic** in MS Visio to transition manual workflows into **autonomous execution** for 20+ enterprise programs.
- **Acted as the final validation checkpoint before go-live** - after aligning with Architecture, Dev, and QA on process and technical readiness, I secured sign-off from the project owner to confirm each workflow was compliant and ready for publishing.
- **Managed the Centralized Process Repository in Confluence**, documented end-to-end DaaS workflows, **Business Glossary** adopted by all teams as standardized source of truth and **Agentic AI Guardrails**.
- Executed **requirement gathering and business analysis** leveraging VOC, BRD documentation through **brainstorming sessions, targeted requirements workshops and operational observations**.
- Defined '**Condition-Based Branching**' and HITL (**Human-in-the-Loop**) logic for **Agentic AI** invoice automation, partnering with the tech team to implement it and **eliminate manual data entry** while maintaining a full JIRA-tracked audit trail.
- Applied **Lean principles** to streamline legacy operational processes prior to cloud and digital transitions, eliminating redundant human touchpoints and non-value-added steps.
- Maintained **project plans and tracked milestones, risks, and dependencies** across workstreams, providing regular, accurate status reporting to stakeholders.

Key Projects (IRIS):

Project 1: Agentic AI & Logistics Automation (Logistics Operations)

Objective: Eliminate manual data entry in logistics invoice processing by deploying autonomous AI agents with exception handling.

Transformation: Defined the Agentic AI Logic Framework in BPMN 2.0; engineered Condition-Based Branching where the AI agent simultaneously triggers real-time Email alerts to the onshore team and logs JIRA tickets for exception.

Impact: Achieved a 30% reduction in manual processing effort while maintaining a full audit trail of every exception in JIRA, ensuring every Human-in-the-Loop (HITL) intervention was tracked, assigned, and resolved with full visibility.

Project 2: Strategic Cloud Migration & DaaS Architecture (EdTech IT Operations)

Objective: Redesign 20+ legacy Edtech programs ahead of cloud migration.

Transformation: Led the Process Governance and gap analysis to identify and eliminate process bottlenecks and non-value steps by technical mapping of data flows; used BPMN 2.0.

Impact: Optimized the "To-Be" state to achieve a 20% reduction in cycle time for program onboarding and established standardized, audit-ready operational workflows for the DaaS team.

HSBC ELECTRONIC DATA PROCESSING | Manager – OTPE

(Jun 2022–Jan 2024)

Led Global Process Standardization across GSC operations and served as Continuous Improvement Coach

- **Led Global Process Architecture** by designing "Golden/Master Maps" for **26 countries** in **SAP Signavio**; enforced **BPMN 2.0 standards** to drive process standardization and eliminate global SLA **variances** (24hr vs. 48hr).
- **Conducted advanced "What-If"** analysis via Signavio to optimize FTE requirements for Wholesale Credit operations, resulting in a 5% reduction in resource overhead across 11 international markets, which adopted an accreditation-based QA model and RPA-driven reporting.
- Facilitated deep-dive **Root Cause Analysis (RCA)**, **Fishbone diagrams**, **Pareto Analysis**, **FMEA** and SIPOC/VOC-driven scoping with Global Process Owners to translate operational risk vulnerabilities into high-ROI workflow automation and structured improvement roadmaps.
- **Built Real-Time Governance Dashboards** to provide executive stakeholders with transparent visibility into project milestones, deployment metrics, and active risk mitigation portfolios.
- Ensured process documentation and control artifacts met **audit-readiness standards** as part of process responsibilities.
- **Served as a Continuous Improvement (CI) Coach**, mentored CI agents and managed multiple **high-impact DMAIC projects** focused on error-reduction and efficiency gains in Wholesale Lending workflows.

Key Projects (HSBC):

Project 1: Global Process Architecture & Standardization (26 Markets)

Objective: Eliminate process fragmentation across 26 onshore and offshore markets by establishing a unified Target Operating Model.

Transformation: Architected end-to-end Value Stream Mapping of Wholesale Credit services using SAP Signavio; enforced strict BPMN 2.0 standards to establish a "Golden/Master Map" for global operations.

Impact: Achieved 20% faster process adoption, with 11 markets adopting the accreditation model and RPA-driven reporting as the new standard.

Project 2: Rework Reduction in Credit Operations (6 Markets)

Objective: Reduce high rework volume caused by manual rate-calculation errors (Fixed Rate + Spread) at disbursement across 6 markets.

Transformation: Diagnosed Root Cause using RCA and Pareto analysis; implemented an Excel-based calculation template with auto-fetched spread data and manual fixed-rate entry, with template upload to loan package as a QA control point.

Impact: Reduced manual calculation errors by 20%, accelerated turnaround time (TAT) for Wholesale Lending disbursements.

BETTER.COM | Ops. Team Leader – Title & Settlement

(Jan 2020–May 2022)

Managed high-performance execution teams focused on operational quality of US Mortgage

- **Governed the Operational Excellence framework** for a team of 18+, enforcing strict SLA compliance, quality standards, and turnaround-time (TAT) metrics within US Mortgage operations.
- Drove Continuous Improvement initiatives through Time & Motion studies and Gap Analysis, collaborating with cross-functional squads to integrate streamlined updates into SOPs and remove processing friction from mortgage documentation lifecycle.
- Led **Data-Driven Performance Monitoring** by building real-time dashboards to identify and resolve bottlenecks, maintaining end-to-end visibility and revised KPIs.

Key Project: Operational Transition & Workflow Standardization (US Mortgage):

Objective: Managed the process transition and standardization of Title & Settlement workflows during a high-volume growth phase.

Transformation: Executed a Time and Motion study alongside GAP analysis to baseline task durations, eliminated non-value-added processing friction, and anchored the Control phase to integrate streamlined updates into SOPs and revised team KPIs.

Impact: Established a unified operational model that achieved 30% time efficiency and saved 4 FTEs, reducing operational cost.

GENPACT INDIA PVT LTD. | SME & Workflow Coordinator

(Jun 2012–Dec 2019)

Progressive experience across Banking & Finance (AP) domains

- **Coordinated Workflow and Quality Assurance** for the Commercial and Housing Loan teams of a leading Australian Bank, ensuring adherence to **risk and regulatory frameworks**.
- **Identified and mitigated operational gaps** by auditing the end-to-end loan disbursement lifecycle — leveraging **Lean methodologies and RPA concepts** to optimize process cycle times, resolve client documentation discrepancies, and deliver data-driven improvements across high-volume workstreams.
- **Collaborated with the Automation team to transition manual F&A tasks** to system-driven logic, assisting in the development of Oracle templates for recurring journal entries and invoice processing.

Key Projects (Banking):

- **Lending Cycle Optimization:** Diagnosed process bottlenecks using Value Stream Mapping, Kanban, 5-Why, RCA to eliminate documentation delays; achieved 20% time efficiency and 3 FTE savings.

- **Total Lending Approval Accreditation:** Identified Approval Dependency as the primary root cause for SLA breaches. Secured TLAA delegated authority, eliminating approval-dependency delays and improving TAT by 20%.

EDUCATION & CERTIFICATIONS

- **Masters (PGDM) in Operations – IMT Ghaziabad**
- **AI-Enabled Lean Six Sigma Black Belt Certified – June2026**
- **PMI - Generative AI for Project Managers**
- **Banking Demystified Certified**
