

Targeting Senior Backend Developer roles with expertise in Node.js while also open to opportunities in Java, Python, or managerial positions, contributing to scalable system design, performance optimization, and cross-functional leadership. Prefer opportunities in Bangalore, Pune, Hyderabad, or remote setups.

[linkedin.com/in/shristi-ansuka-b87610151](https://www.linkedin.com/in/shristi-ansuka-b87610151)

CORE COMPETENCIES

- Backend System Architecture
- API Development & Integration
- Database Design & Migration
- Cloud Infrastructure Optimization
- High Availability & Fault Tolerance
- Microservices Implementation
- Observability & Monitoring
- Agile Project Delivery
- Stakeholder Collaboration
- Performance Tuning & Optimization

TECHNICAL SKILLS

Languages & Frameworks:
Node.js, TypeScript, JavaScript, Express.js

Databases & Search:
MySQL, MongoDB, Redis, Elasticsearch

Cloud & DevOps:
AWS (EC2, S3, RDS, Lambda, IAM, CloudWatch, EventBridge, Auto Scaling), Docker, Linux (Ubuntu), Nginx, PM2, Google APIs

Tools & Architecture:
REST APIs, OAuth 2.0, Bitbucket, Shell Scripting, Microservices

Monitoring & Integration:
Nagios, Winston, Firebase Cloud Messaging, QuickBooks API

SOFT SKILLS

- Leadership & Cross-Functional Collaboration
- Analytical Thinking & Problem-Solving
- Adaptability & Continuous Learning

EDUCATION

2020: B.E. in Chemical Engineering, Birla Institute of Technology, Mesra

PERSONAL DETAILS

Languages Known: English, Hindi
Address: Pune, Maharashtra, 411028

Shristi Ansuka

Senior Software Engineer

PROFILE SUMMARY

- Backend Engineering Professional with over 6 years of experience in architecting scalable, resilient, & high-performance server-side systems across cloud-native environments.
- Currently working as a Senior Software Engineer with Lognormal.io (OVO Energy), and previously as a Senior Software Engineer at Zentrades, Pune, leading end-to-end back-end development, technical design, and delivery of enterprise-grade solutions.
- Skilled in Node.js, MySQL, MongoDB, Redis, Elasticsearch, and Python (working knowledge), with proven expertise in API development, microservices implementation, and enterprise integrations.
- Showcased success in cloud infrastructure optimization on AWS (EC2, Lambda, RDS, S3, CloudWatch, Auto Scaling), ensuring cost efficiency, scalability, and fault tolerance.
- Played a key role in architecture modernization, including transitioning monolithic systems to Microservices and executing seamless database migrations.
- Recognized for leading a team of 16 developers and 4 QA engineers, driving sprint planning, feature prioritization, and stakeholder alignment for mission-critical projects.
- Strong track record of improving system reliability, reducing outages, and enhancing performance metrics through proactive monitoring, observability platforms, and optimization.

WORK EXPERIENCE

Lognormal.io (OVO Energy) | Senior Software Engineer | Nov 2025 – Present

- Working across a UK energy client's government rebate and customer-support schemes, spanning a Scala service, a TypeScript monorepo, Terraform infrastructure, and GitOps-based deployments.
- Resolved a payment-reporting defect ahead of an external audit by tracing flagged cases to reporting artifacts rather than real duplicate payments, and corrected the logic for a previously unaccounted-for payment channel.
- Extended and backfilled production data models across ~65,000 records with zero data-integrity mismatches, making previously unreportable customer data complete and joinable.
- Designed and executed a controlled pause and resume of a live third-party integration, draining a backlog of ~5,000 queued records and hardening the batch job after a mid-run infrastructure failure.
- Authored technical analyses behind architecture and scheme decisions, presenting options, trade-offs, and recommendations backed by supporting evidence.

Zentrades, Pune | Senior Software Engineer | Jul 2020 – Jul 2025

Growth Path: SDE 4 (Senior Software Engineer) | Mar 2023 – Jul 2025 SDE 3 | Jul 2021 – Feb 2023 SDE 1 | Jul 2020 – Jun 2021

- Directed collaboration with 20+ engineers and stakeholders, driving sprint planning and project execution.
- Supervised end-to-end implementation of enterprise solutions including AI agents, client portals, and ACL-based systems.
- Implemented observability with Nagios, Winston, and CloudWatch, improving incident detection and resolution.
- Deployed high-availability infrastructure using Node.js clusters, PM2, and Nginx, boosting system reliability.
- Executed MongoDB-to-MySQL migration and Monolith-to-Microservices transition, enabling scalability.

Projects:

QuickBooks API Integration Service

- Engineered a bidirectional sync engine with OAuth 2.0, transactional batch processing, and resilient error management; integrated FCM for real-time failure alerts, reducing sync inconsistencies.

Inventory Management & Pricing Module

- Developed an event-driven inventory management system (Node.js) to enable real-time stock updates during procurement and invoicing.
- Implemented real-time and scheduled inventory alerts, leveraging FCM, AWS Lambda, and EventBridge, with CSV export for reporting.
- Built a configurable pricing engine with a calculator module to apply bulk pricing rules using batch-processing for seamless updates.

AWS Auto Scaling & Infrastructure Optimization

- Configured EC2 auto scaling with CloudWatch triggers, enhancing fault tolerance and resource efficiency while reducing infrastructure costs.

Key Achievements:

- Directed and mentored a back-end team, driving cross-functional delivery & knowledge sharing; recognized with a “Growing Leader” award for effective leadership & collaboration.
- Consistently maintained 99.9% system uptime, measured bi-weekly and showcased in leadership reviews to demonstrate operational reliability.
- Improved API response times after back-end optimization and query tuning.
- Implemented AWS Auto Scaling, eliminating manual capacity management and saving significant hours monthly.
