PROFESSIONAL SUMMARY

Software Engineer with 3+ years of experience designing and building distributed systems, serverless applications, AI-powered platforms, and cloud-native solutions on AWS. Experienced in architecting event-driven microservices, Retrieval-Augmented Generation (RAG) systems, enterprise authentication platforms, and real-time conversational AI applications. Proven track record of delivering production-grade solutions using Python, Node.js, React, AWS Lambda, DynamoDB, OpenSearch, Bedrock, and LangGraph. Strong foundation in system design, scalability, and end-to-end product ownership.

EDUCATION

Maulana Azad National Institute of Technology, Bhopal, India
Bachelor of Technology in Mechanical Engineering

2019 - 2023
CGPA: 7.97

SKILLS

- Languages: JavaScript, TypeScript, Python, Java, SQL
- Frontend: React.js, TypeScript, HTML, CSS, Redux, Responsive UI Development,
- Backend: Node.js, Express.js, FastAPI, Flask, REST APIs, Microservices, Event-Driven Systems, Redis
- Cloud & DevOps:: AWS(Lambda, EC2, API Gateway, DynamoDB, S3, Cognito, SQS, Bedrock, Sagemaker), Docker, Kubernetes, Serverless Architecture, Azure AD
- Databases & Distributed Systems: DynamoDB, MySQL, FAISS, ChromaDB, Distributed Architectures, PostgreSQL, Qdrant
- Software Engineering: Data Structures & Algorithms, System Design, CI/CD, Git, Agile/Scrum, Testing & Debugging
- AI/ML: LangChain, LangGraph, RAG Pipelines, OpenAI, Anthropic, HuggingFace, Prompt Engineering, NLP, Spacy, Pandas, Numpy, PyTorch

EXPERIENCE

Software Engineer @ Trianz
Hyderabad

August 2023 - Present

- Architected and developed scalable event-driven backend systems using AWS Lambda, SQS, DynamoDB, and Node.js, supporting concurrent real-time AI voice interactions with dynamic workload management.
- Built production-grade full-stack applications using React, JavaScript, TypeScript, and REST APIs, improving user engagement and reducing operational overhead through automation.
- Designed distributed microservices and serverless workflows for CRM and lead management platforms, enabling real-time data processing and intelligent routing.
- Developed highly scalable RAG-based document intelligence systems capable of semantic retrieval across large datasets with low-latency responses and optimized indexing strategies.
- Implemented secure authentication and authorization systems using JWT, AWS Cognito and Azure AD SSO for enterprise and government-grade applications.
- Developed modular Python-based AI orchestration services using FastAPI and LangGraph for autonomous workflow execution.
- Led technical architecture discussions, system design decisions, and end-to-end feature delivery across multiple production applications.
- Mentored team members on scalable backend architecture, serverless design patterns, and frontend integration best practices.
- Built scalable Python microservices for RAG pipelines, semantic search, and LLM-powered business automation.
- Containerized AI services using Docker and integrated deployment pipelines for scalable cloud-native environments.

PROJECTS

- Led development of a secure full-stack web platform for US government digital evidence management using React, AWS S3, Lambda, Cognito, and Azure AD SSO.
- Designed scalable access-control workflows and federated authentication systems supporting secure multi-agency collaboration and compliance requirements.
- Owned architecture planning, sprint execution, stakeholder communication, and production delivery lifecycle.

ACHIEVEMENTS

- Built a scalable full-stack recruitment platform using React, Node.js, and TypeScript featuring automated resume analysis, real-time interview evaluation, and intelligent candidate matching.
- Developed responsive frontend interfaces and backend APIs supporting concurrent recruiter workflows and low-latency candidate processing.
