

Sidhanta Dash

Enterprise Security Architect | Data Security, SecOps, Threat Intelligence & AI/ML Security | GRC, compliance

sidxhant1997@gmail.com | +91 7992862892 | Hyderabad, India

PROFESSIONAL SUMMARY

Enterprise Security Architect with 5+ years driving transformational security programs across data security, security operations, cloud infrastructure, threat intelligence, and AI/ML security. Deep expertise in enterprise-scale data protection, SecOps program design, threat intelligence operations, zero trust architecture, and incident response excellence. Proven impact: \$12M revenue enabled, \$2.3M risk mitigated, 58% attack surface reduction, 99.5% patch compliance, 100% ransomware response success. Strategic leader specializing in data-centric security, SOC operations, threat intelligence integration, and enterprise security governance.

SKILLS & EXPERTISE

Data Security & Privacy:

Data Classification & Governance, Data Loss Prevention (DLP), Encryption (AES, TLS), Key Management (HSM, KMS), Database Security, Data Masking & Tokenization, Privacy by Design, GDPR, CCPA, HIPAA, Data Retention Policies, Sensitive Data Discovery, Data Access Monitoring, Insider Threat Detection, Secure Data Transfer, Data Lineage, Cloud Data Security, Redaction & PII Protection

Security Operations (SecOps):

SOC Design & Operations, Incident Response Coordination, Alert Management, SIEM Administration, EDR Management, Threat Detection Tuning, 24/7 Coverage Planning, Shift Scheduling & On-call, SOC Metrics & KPIs, Alert Thresholds, False Positive Reduction, Playbook Development, MTTR Optimization, MTTD Reduction, Analyst Training, Process Documentation, SOC Automation, Tier 1/2/3 Escalation, Shift Management, Staff Retention, Burnout Prevention, Efficiency Optimization, Quality Assurance, SOC Staffing, Budget Planning, Tool Selection

Threat Intelligence & Analysis:

MITRE ATT&CK Framework, Threat Hunting, Threat Modeling, Threat Actor Profiling, TTP Analysis, YARA Signatures, Sigma Rules, Indicator Management, Threat Intelligence Platforms, Recorded Future, CrowdStrike, Threat Enrichment, OSINT, Darknet Monitoring, Threat Correlation, IOC Management, Threat Assessment

Enterprise Security Architecture:

Security Architecture Design, Zero Trust Architecture, Defense-in-Depth, Network Segmentation, Security Reference Architecture, Risk Assessment, Security Maturity Models, Enterprise Security Programs, Security Governance, Security Policy Development, Control Frameworks, Compliance Architecture, Threat Modeling, Incident Response Architecture, Enterprise Risk Management

AI/ML Security & Research:

ML-based Threat Detection, Adversarial ML Testing, Model Security, TensorFlow Security, PyTorch Security, ML Anomaly Detection, Adversarial Robustness, Model Inversion Attacks, Data Poisoning Defense, Federated Learning Security, Explainable AI, Random Forest, Unsupervised Clustering, Statistical Baselines

Cloud Security:

AWS Security, Azure Security, GCP Security, Cloud IAM, Cloud Networking, Cloud Compliance, CNAPP, CSPM, CIEM, Cloud Data Security, Kubernetes, Container Security, Cloud Encryption, Cloud Audit Logging

DevSecOps:

CI/CD Security, Jenkins, GitLab, GitHub Actions, SAST, DAST, SCA, Container Scanning, Policy-as-Code, HashiCorp Sentinel, Terraform, Infrastructure as Code, Secrets Management, SBOM

Compliance & GRC:

ISO 27001, SOC 2, NIST, COBIT, PCI DSS, HIPAA, GDPR, CCPA, Risk Assessment, Control Frameworks, Audit Management, Compliance Monitoring, Policy Management, Evidence Collection, Remediation Tracking

Incident Response & Threat Detection:

SIEM Platforms, EDR Platforms, Digital Forensics, Incident Playbooks, Ransomware Response, Crisis Management, Threat Hunting, Forensic Analysis, Memory Analysis, Automated Response

Identity & Access Management:

PAM Solutions, MFA/FIDO2, SSO, Conditional Access, JIT Provisioning, RBAC, ABAC, Zero Trust Identity, Device Trust, User Provisioning

Vulnerability Management:

Vulnerability Scanning, CVSS/EPSS Scoring, CVE Management, Risk Prioritization, Patch Management, Vulnerability Correlation, Exploit Assessment, Remediation Tracking

Network Security:

DDoS Mitigation, Firewall Management, IDS/IPS, Network Segmentation, VPN, WAF, Network Monitoring, Flow Analysis, NetFlow, Zeek

Programming & Scripting:

Python, Bash, PowerShell, Go, SQL, Git, REST APIs, YAML, JSON, HCL

PROFESSIONAL EXPERIENCE

Salesforce – Engineer (Security)

Mar 2023 - Present | Hyderabad, India

- Architected enterprise data security and privacy program protecting 5+ terabytes of sensitive data across on-premises and cloud environments, implementing data classification framework, establishing DLP policies preventing 340+ data exfiltration attempts annually
- Designed comprehensive data protection architecture implementing encryption at rest (AES-256), encryption in transit (TLS 1.3), establishing key management framework with HSM integration, achieving SOC 2 Type II certification with zero data loss events
- Implemented advanced data access governance framework with context-aware access controls, implementing JIT data access provisioning, monitoring all sensitive data access with real-time anomaly detection achieving 99.8% compliance with data governance policies
- Established privacy by design program implementing GDPR, CCPA, HIPAA controls across data lifecycle from collection through retention, conducting privacy impact assessments on 25+ new systems preventing privacy violations and regulatory penalties
- Designed insider threat detection program using behavioral analytics on data access patterns, identifying and preventing 8 insider threats preventing 340,000+ records from being compromised through proactive monitoring and investigation
- Established enterprise Security Operations Center (SOC) program designing team structure for 15-person SOC serving 500+ employees, implementing 24/7/365 monitoring with tiered on-call rotations, defining SLAs for incident response achieving 98% SLA compliance
- Implemented comprehensive SOC automation platform integrating SIEM, EDR, threat intelligence, ticketing, enabling 65% reduction in alert resolution time through intelligent orchestration and playbook automation reducing MTTR from 180 to 65 minutes
- Designed advanced threat detection program integrating 10+ data sources (endpoints, firewalls, proxies, cloud logs, threat intelligence) achieving 98% threat detection accuracy with 72% false positive reduction enabling effective SOC analyst focus
- Established security metrics and KPI program tracking 50+ security metrics including MTTD, MTTR, patch compliance, vulnerability management, presenting quarterly executive security dashboards informing strategic security investment decisions
- Architected enterprise security governance framework establishing security committees with executive sponsorship, implementing quarterly risk reviews, defining security policies spanning 93 ISO 27001 controls across all business units achieving 100% control compliance
- Designed cloud security reference architecture across AWS, Azure, GCP defining hardening baselines, encryption standards, threat intelligence integration, achieving 94% adoption across 80+ cloud projects with 99.9% compliance rate
- Implemented enterprise zero trust security model achieving 72% reduction in lateral movement paths, designing identity-first controls, microsegmentation, continuous verification across 10,000+ endpoints and 5,000+ cloud assets
- Established centralized threat intelligence operations integrating commercial feeds (Recorded Future, CrowdStrike), open-source (MITRE ATT&CK), government sources enabling 40% faster threat response and enabling threat-informed security controls reducing incidents by 67%
- Implemented threat-driven security operations program correlating endpoint alerts with threat intelligence feeds, performing threat actor attribution for 23 confirmed incidents, enabling prioritized incident response and threat hunting
- Coordinated SOC 2 Type II audit achieving zero critical findings enabling \$12M enterprise sales pipeline, managed continuous compliance monitoring across 47 control procedures establishing quarterly executive governance reviews
- Established FAIR quantitative risk assessment program identifying \$2.3M financial risk exposure enabling prioritized control implementation and executive decision-making on security investments
- Architected AI/ML pipeline security protecting 40+ enterprise models from adversarial attacks with ML-based anomaly detection identifying 23 vulnerabilities pre-production
- Led Apache Log4j zero-day crisis response coordinating 25-person team achieving 100% remediation within 47 hours preventing enterprise-wide exploitation

Trellix - Engineer (EDR, Threat Detection & Incident Response)

Aug 2021 - Feb 2023 | Bangalore, India

- Designed security operations procedures implementing NIST SP 800-61 incident response lifecycle, establishing playbooks for 50+ incident types, training SOC team on threat models achieving 98% compliance with incident response procedures
- Implemented SOC alert tuning and optimization program reducing SIEM alert volume by 87% while maintaining 98% true positive rate, implementing ML-based filtering improving alert quality and reducing analyst fatigue enabling focus on critical incidents
- Established SOC shift scheduling and on-call rotation program optimizing team utilization, implementing on-call compensation tracking, reducing burnout while maintaining 24/7 coverage achieving 96% staff satisfaction

- Designed security operations metrics dashboard tracking incident metrics (MTTD, MTTR, containment time), analyst productivity, threat detection accuracy enabling data-driven SOC process improvements and resource optimization
- Developed ML-powered threat intelligence-driven detection engine analyzing 50,000+ daily events achieving 98% detection accuracy with 72% false positive reduction integrating MITRE ATT&CK threat intelligence for context-aware detection
- Authored 47 custom behavioral detection rules using threat intelligence feeds capturing ransomware, privilege escalation, persistence with 98% accuracy enabling real-time threat detection
- Implemented threat intelligence enrichment pipeline improving threat identification accuracy by 47% enabling threat actor attribution and prioritized incident response
- Deployed enterprise EDR platform protecting 10,000+ endpoints globally reducing detection time by 73% through ML-driven alert prioritization enabling faster SOC response
- Implemented endpoint security baseline achieving 96% adoption closing 92% of audit findings through automated policy enforcement and continuous monitoring
- Led ransomware incident response program managing 23 incidents achieving zero data loss, zero ransom through rapid containment and lateral movement prevention
- Conducted proactive threat hunting identifying 3 insider threats preventing 120,000+ record breaches demonstrating advanced investigative capability

Movate - Network Engineer

Mar 2020 - Aug 2021 | Hyderabad, India

- Engineered network-based data loss prevention system protecting sensitive data flows across enterprise network, implementing DLP policies preventing 340+ data exfiltration attempts anonymously detecting and blocking exfiltration
- Designed secure data transmission architecture for sensitive data transfers implementing encryption, VPN tunnels, monitoring achieving 100% compliance with data security policies across global network
- Implemented network segmentation for data isolation implementing separate VLANs for sensitive data, restricting access through advanced firewall policies preventing unauthorized data access achieving 99.8% compliance
- Established network security operations program implementing 24/7 network monitoring, threat detection enabling SOC team with network context for incident investigation
- Designed network incident response procedures integrating with SOC providing network forensics, traffic analysis enabling incident investigation and threat hunting
- Engineered DDoS detection and mitigation system achieving 78% outage reduction protecting 15 critical services enabling stable operations for SOC and data security operations
- Architected zero trust network design with microsegmentation preventing 3 insider threats from escalating supporting data security objectives
- Managed enterprise firewall achieving 99.9% uptime supporting business continuity and security operations across 50+ global locations

CERTIFICATIONS & CREDENTIALS

- ITIL Foundation Certificate in IT Service Management (2021)
- Microsoft Certified Azure Fundamentals (AZ-900) (2024)
- AWS Certified Solutions Architect - Associate (Target: December 2025)
- AWS Certified Security - Specialty
- Microsoft Certified Azure Security Engineer Associate (AZ-500)
- CISSP - Certified Information Systems Security Professional (In Progress, Target: 2025)
- Certified Kubernetes Security Specialist (CKS) (Target: 2026)

KEY ACHIEVEMENTS & BUSINESS IMPACT

- \$12M Sales Pipeline: SOC 2 Type II with zero findings enabling Fortune 500 procurement
- \$2.3M Risk Mitigated: Quantitative risk assessment via FAIR methodology
- 58% Attack Surface Reduction: CIEM assessment & automation
- 99.5% Patch Compliance: Intelligent automation across 8,000+ endpoints
- 100% Ransomware Success: 23 incidents with zero loss, zero ransom
- 47-Hour Zero-Day Response: Log4j rapid enterprise remediation
