

Objective :

Working in an environment, which motivates me to bring out the best from me in a productive and efficient manner. Wish to work as a **Software Developer**, which perfectly fits my imagination and analytical skills.

Summary :

- **4 years** of Experience in the IT **Industry** holding a sound knowledge in **Software Development**.
- Hands-on Experience on **Node Js with Encore TS Framework, Express Framework and Nest Js Framework**.
- Hands-on Experience on Experience in **Javascript** and **Typescript**.
- Hands-on Experience on **Angular**.
- Hands-on Experience on **Kafka** for **data streaming**.
- Hands-on Experience on **React Js with next js and VITE**.
- Hands-on Experience on **React Native with Expo**.
- Hands-on Experience on **Spring boot**.
- Hands-on Experience on **Python**.
- Hands-on Experience on **Web Sockets**.
- Hands-on Experience on **Micro services and Micro Frontend**.
- **Scalable production-grade applications**
- **Agile environment experience**
- **AI-assisted development tools experience**
- Hands-on Experience on **SQL/NOSQL**.
- Hands-on Experience on **Cloud Platform(AWS/AZURE/GCP)**

Profile summary :

- Software Developer in **INT U CEO** Hyderabad from **NOV 2025** to Till date
- Software Developer in **RENAULT NISSAN TECHNOLOGY AND BUSSINESS CENTRE INDIA** Hyderabad from **JUNE 2022** to **NOV 2025**.
- Software Developer as a **INTERN** in **ROCKWELL AUTOMATION**, from **JAN 2022** to **JULY 2022**.

Education :

- B.TECH From Bharath university, chennai in 2018-2022 with CGPA of **8.9**

Skill set:

- **Language** : Python, Javascript, Typescript, java, Jenkiens, Argo CD
- **Back-end Technologies** : nodejs with Express Js and nest js, Encore TS, spring boot. Flask Web framework, Django Web framework,
- **Front-end Technologies** : Angular, React Js, React native.
- **Development Tools** : Pycharm, visual code studio. IntelliJ, eclipse
- **Database** : SQL, MySQL, Postgres, Mongo db.
- **Cloud & DevOps** : AWS, GCP, Jenkins, ArgoCD, Docker, Kubernetes
- **Tools & IDEs:** : VS Code, IntelliJ, PyCharm, Eclipse
- **Other** : Kafka, Electron, API Gateway, ONE Signal
- **Version Control & Agile** : Git, JIRA, Trello, Agile & Scru

Project profile :

Project #9 : DARTT

Team Size : 4

Tech Stack: Angular, Node.js, NestJS, Apache Kafka, Elasticsearch, TypeScript, REST APIs, Git, Agile/Scrum

Project Description:

- Developing an enterprise recruitment and manpower management application for Bosch to streamline hiring requests, resource planning, and workforce tracking.
- Built responsive and reusable UI components using Angular, following a modular and scalable architecture.
- Developed secure RESTful APIs using NestJS and Node.js to manage recruitment workflows, manpower requests, approvals, and user operations.
- Integrated Apache Kafka for event-driven communication, enabling asynchronous processing of recruitment and manpower events.
- Implemented Elasticsearch to provide high-performance search, filtering, and indexing across recruitment requests and manpower records.
- Designed scalable backend modules following clean architecture and dependency injection principles in NestJS.
- Collaborated with cross-functional teams to translate business requirements into scalable technical solutions while following Agile development practices.
- Optimized application performance through efficient API design, lazy loading, and reusable component architecture.
- Participated in code reviews, bug fixes, production support, and continuous feature enhancements while maintaining high code quality.

Project #8 : BAUSCH + LOMB

Team Size : 4

Tech Stack : REACT with NEXT js and Daisy UI, FAST API, python, MS SQL, Tailwind CSS, RBAC

Description: Developed an internal enterprise productivity monitoring application for Bausch + Lomb focused on collecting and analyzing real-time machine data. The application enables administrators to monitor machine performance, production metrics, and operational insights through interactive dashboards and reports. Operators can log breaks, report issues, and update machine statuses, ensuring accurate shop-floor visibility. Implemented secure role-based access to differentiate admin and operator functionalities, improving operational efficiency and workforce productivity. The system supports robust data workflows, advanced tabular analysis, and visual reporting to help management make data-driven decisions.

Responsibilities:

- Developed modular React + Next.js components with Tailwind CSS and Daisy UI for clean UI, responsive layouts, and reusable design patterns.
Utilized Pre-React Signals to build highly reactive forms and state-driven UIs without relying on third-party state management libraries.
- Implemented WebSockets to stream real-time machine status updates, operator actions, and dashboard refreshes without page reloads.
- role-based access control (RBAC) to secure routes, APIs, and user permissions.
- Developed and consumed RESTful APIs using FAST API with Python for machine data ingestion, operator actions, audit logs, and permission configurations.

Project # 7 : **Digital BOM**
Team Size : **4**
Tech Stack : REACT with VITE and Tailwind CSS, Node with Express JS MSSQL, Tailwind CSS, RBAC

Description: Developed an internal enterprise application focused on tracking and managing parts across different stations within a manufacturing plant. The system enables users to monitor the real-time location and movement of parts, ensuring complete visibility of production flow. Administrators can add, modify, and manage parts based on plant configurations, while also controlling how components move between stations. The application improves traceability, reduces manual errors, and enhances operational efficiency by providing structured workflows, real-time updates, and data-driven insights into part distribution and station utilization.

Responsibilities:

- ❖ Developed modular React + Vite components with Tailwind CSS for clean UI, responsive layouts, and reusable design patterns.
- ❖ Utilized Pre-React Signals to build highly reactive forms and state-driven UIs without relying on third-party state management libraries.
- ❖ Developed and consumed RESTful APIs using Node with Express js

Project # 6 : **ONE VAL**
Team Size : **4**
Tech Stack : Angular 18 (Standalone Components, Signals), Node With Nest js, PostgreSQL, AG Grid, AG Charts, Tailwind CSS, Keycloak, Docker, Jenkins

Description: Developed an internal enterprise application for **vehicle audit and validation** at Renault. The project focused on robust data workflows, real-time reporting, and secure role-based access. Leveraged **Angular 18 standalone components** with **Signals** for reactive state management, integrated **AG Grid** for advanced tabular data operations, and used **AG Charts** for visual dashboards. Backend was built using **Node with Nest js** and integrated with secure **Keycloak** SSO.

Responsibilities:

- ❖ Developed **modular Angular standalone components** with **Tailwind CSS** for clean UI and responsive layouts.
- ❖ Utilized **Angular Signals** to build highly reactive forms and state-driven UIs without third-party state management libraries.
- ❖ Implemented **AG Grid** for handling large-scale datasets with **pagination, sorting, filtering, row selection, and cell editing**.
- ❖ Integrated **AG Charts** to deliver real-time insights and interactive dashboards for audit analytics.
- ❖ Used **Keycloak** for **SSO, OAuth2, and role-based access control (RBAC)** to secure route and API access.
- ❖ Developed and consumed RESTful APIs using Node with Nest js for inspection workflows, audit logs, and permission configurations.
- ❖ Containerized backend services using **Docker** and deployed through **CI/CD pipelines in Jenkins**.
- ❖ Used **PostgreSQL** with Spring Data JPA to manage relational audit records with validations and optimized queries.

Project # 5 : **ONE Health**
Team Size : **5**
Role : **mobile developer + Encore TS**
Duration : **MARCH 2025 to Till Date**
Back-end Framework : **Encore TS**
Front-end Framework : **React native(Gluestack Ui)**
Other technologies : **Kafka,**
Database : **mongo db**

Description: Developed an internal health monitoring application for Renault vehicle components. Implemented real-time status tracking and request management features using Kafka for event-driven communication. Built a responsive and scalable frontend in React Native integrated with robust

Encore TS backend APIs. Ensured seamless data flow and efficient system diagnostics through MongoDB for real-time persistence and analytics.

Responsibilities:

- ❖ Developer for the **ONE Health** application using **React Native** for the frontend and **Encore TS** for scalable backend services.
- ❖ Designed and implemented key features such as **employee health status tracking, appointment scheduling, and health request management** to support internal healthcare operations at **Renault**.
- ❖ Integrated **Kafka** for real-time event streaming and notifications, enabling instant updates across systems.
- ❖ Utilized **OneSignal** for sending **push notifications** and **SMS alerts**, improving user engagement and real-time communication.
- ❖ Worked closely with cross-functional teams to ensure **seamless integration** with internal Renault systems and improved **user experience** for health service access.
- ❖ Optimized backend workflows and data models using **MongoDB**, ensuring **fast, reliable, and secure health data** handling at scale.

Project # 4 : **TEMA-2**
Team Size : **5**
Role : **Full Stack Developer Engineering-01**
Duration : **AUGEST 2024 to Till Date Backend**
Framework : **NodeJs using Nest Js Framework**
Frontend Framework : **React**
Other technologies : **Kafka**
Database : **mongo db**

Description: TEMA is an application used by internal teams within the Renault Group to test vehicle components.

Responsibilities:

- ❖ Developer of TEMA app using **React** for the frontend and **NodeJs** for backend services.
- ❖ Architected and implemented key app features, including service request management, real-time status tracking, and provider engagement tools to streamline facilities management workflows.
- ❖ Collaborating with cross-functional teams to deliver high-performance, scalable solutions, ensuring seamless integration with RNTBCI internal systems and improving user experience.
- ❖ Optimized backend services to enhance response times and increase overall app performance for large-scale enterprise operations.

Project # 3 : **MPM**
Team Size : **4**
Role : **Full Stack developer**
Duration : **Jan 2024 to July 2024**
Backend Framework : **NodeJs using Nest Js Framework**
Frontend Framework : **React.**
Other technologies : **Kafka** for data streaming.
Database : **Postgres**

Description: MPM is another application used for testing the micro parts of vehicles. In this project, we updated the legacy system to a new technology while maintaining the same functionality.

Responsibilities:

- ❖ Completed hands-on configuration between client and staging servers. ❖
- Developed UI components
- ❖ Completing Requirements within the timelines.

Project # 2 : **OPALE-2**
Team Size : **8**
Role : **Full Stack Developer**
Duration : **Jan 2023 to DEC 2023**
FrameWork : **NodeJs using Nest Js Framework, React Js.**
Database : **Postgres**

Description: OPALE-2 is a web application that we developed from scratch and took all the way to production.

Responsibilities:

- ❖ Creating table queries and **REST APIs**
- ❖ Developed UI components
- ❖ Completing Requirements within the timelines.

Project # 1 : TP-2
Team Size : 4
Role : Full Stack developer

Duration : June 2022 to Dec 2022
FrameWork : NodeJs using Nest Js Framework, Angular
Database : Postgres

Description: TP-2 is a web application used for monitoring internal batch processes within the Renault Group.

Responsibilities:

- ❖ Completed hands-on configuration between client and staging servers. ❖
creating a UI to check for the data synced to staging from client servers.
 - ❖ Developed UI components
 - ❖ Integrating server to client
- ❖ Completing Requirements within the timelines
