- Cross-Functional Team Leadership
- Backlog Refinement & Sprint Planning
- UAT & Quality Assurance
- Release & Go-Live Management
- UI/UX Collaboration & Wireframing
- SDLC
- Jira / Confluence / Trello
- Figma / Balsamiq / MS Visio

PROFESSIONAL EXPERIENCE

Business Analyst Cum Scrum Master | Cloudbridge Tech LLP

Feb 2025 – Present

Project: US Healthcare RCM & Claims Management Platform

Client: RCxRules

Project Overview

Worked on a US Healthcare Revenue Cycle Management and Claims Management platform designed to streamline the end-to-end claims and payment lifecycle, from patient/member eligibility and claim submission through adjudication, denial management, payment and reconciliation.

The platform integrated with providers, payer systems, clearinghouses and downstream payment systems to improve claims processing accuracy, reduce denials, and provide better visibility into outstanding claims and reimbursement.

Responsibilities:

- Facilitated discovery and requirement workshops with Claims, Operations, Provider, Member Services, Clinical and Compliance stakeholders to understand current-state RCM workflows and define future-state requirements. Performed requirements elicitation, process analysis, gap analysis and impact analysis, translating business needs into functional specifications, process flows and actionable user stories. Created and maintained BRDs, FRDs, user stories, acceptance criteria, business rules, data mapping and integration requirements across the claims and reimbursement lifecycle.
- Collaborated with Product Owners, architects, developers, QA and vendors to clarify requirements, validate solutions and ensure alignment with business and technical objectives.
- Managed and refined epics, features and product backlog, prioritizing requirements based on business value, dependencies, risks and release priorities.
- Facilitated Sprint Planning, Daily Stand-ups, Backlog Refinement, Sprint Reviews and Retrospectives, ensuring effective Agile delivery and team collaboration. Supported sprint and release planning based on product priorities, team capacity, dependencies and timelines while ensuring stories met DoR and DoD.
- Proactively managed risks, impediments, blockers, issues and cross-team dependencies, driving resolution and maintaining stakeholder communication. Coordinated UAT, defect triage, business validation and production readiness, working closely with QA, development and business teams through release.

- Tracked velocity, burndown/burnup and sprint health, maintained Azure DevOps/Jira artifacts, facilitated continuous improvement and ensured successful delivery of RCM enhancements.

Business Analyst Cum Scrum Master | Sygnius Infotech

Feb 2021 - Dec 2024

Project: US Healthcare Provider Credentialing & Network Management Platform

Client: Verisys

Project Overview

Worked on a healthcare payer platform for provider onboarding, credentialing, network participation and provider lifecycle management. The platform streamlined provider data collection, credential verification, network enrollment, contract management and ongoing provider maintenance.

Responsibilities:

- Conducted stakeholder workshops and requirement discussions with business, Operations, Provider, Member Services and Compliance teams to understand healthcare workflows and define business requirements.
- Analyzed current-state processes, business pain points and functional gaps, and designed future-state workflows to improve operational efficiency and claims processing.
- Translated requirements into epics, features, user stories, acceptance criteria, functional specifications and process flows, ensuring requirements were clear and testable.
- Worked with Product Owners, architects, developers and QA teams to evaluate solution options, system integrations, business rules and data requirements.
- Managed and prioritized the product backlog, supporting requirement decomposition, story refinement, dependency identification and sprint readiness.
- Facilitated Sprint Planning, Daily Stand-ups, Backlog Refinement, Sprint Reviews and Retrospectives, ensuring effective Scrum adoption and delivery cadence.
- Coordinated with cross-functional teams to manage risks, blockers, impediments, dependencies and action items, proactively resolving issues affecting sprint commitments.
- Supported UAT planning and execution, including business scenario validation, defect triage, requirement clarification, retesting and stakeholder sign-off.
- Coordinated release planning, production readiness and deployment activities, ensuring scope, documentation and business validation were completed before release.
- Monitored sprint velocity, burndown, delivery progress and team capacity, communicated status and risks to stakeholders, and drove continuous improvement through retrospective actions.

Functional Test Engineer | Infride Technologies Ltd

Oct 2015 - Feb 2021

Responsibilities:

- Create detailed test cases based on business and functional requirements.
- Execute functional, regression, and integration test cases to ensure application behavior matches requirements.
- Identify, document, and report defects using defect management tools (e.g., JIRA).
- Maintain clear and thorough documentation of test cases, test results, and defect reports.
- Perform regression testing to ensure new changes do not negatively impact existing functionality.
- Work closely with developers to reproduce issues and verify fixes.
- Collaborate with business analysts and product managers to review functional requirements and provide feedback.
- Verify the functionality and usability of the application's user interface.
- Configure and set up test environments that simulate real-world scenarios.
- Perform testing across different platforms (e.g., web, mobile) and browsers to ensure consistent functionality.
- Provide regular updates on test progress, results, and any issues identified during testing.

EDUCATION

B.Sc. - Computer Science - William Carey University, 2009, 72.3%
